VIVDS	Video Image Vehicle Detection Systems
WAVE	Wireless Access in Vehicular Environments
XML	Extensible Markup Language

# 1. INTRODUCTION

## 1.1 Project Overview

The Regional Intelligent Transportation System (ITS) Architecture provides a long-range plan for the deployment, integration, and operation of ITS in the Jackson Region. The Regional ITS Architecture allows stakeholders to plan how they would like their system to operate in the future and then break the system into smaller projects that can be implemented over time as funding permits. Development of a Regional ITS Architecture encourages interoperability and resource sharing among agencies and allows for cohesive long-range planning among regional stakeholders. Completion and update of the plan is also required by the Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) in order to use federal transportation funds for ITS projects in the Region.

The Jackson Regional Intelligent Transportation System (ITS) Architecture was first developed in 2007. Since that time, the Region has begun a number of new ITS initiative including planning for the implementation of a Jackson Traffic Management Center (TMC) and deployment of CCTV cameras and an advanced traffic signal system in the downtown area. Additionally, the National ITS Architecture, which served as the basis for the Jackson Regional ITS Architecture, has been updated. Regional ITS architectures are living documents, and in order to reflect these changes, the Tennessee Department of Transportation completed an update of the Regional ITS Architecture in 2015.

The Regional ITS Architecture consists of several key components:

- ITS Needs – The needs describe the transportation related needs in the Region that could possibly be addressed by ITS.
- ITS Inventory – The inventory describes all of the ITS related elements that either exist or are planned for the Region.
- ITS Service Packages – The ITS service packages describe the services that stakeholders in the region want ITS to provide. ITS service package diagrams have been developed to illustrate how each service will be deployed and operated by each agency in the Region that expressed interest in a particular service. In the previous version of the Jackson Regional ITS Architecture, ITS service packages were referred to as ITS market packages. The name change has been made to be consistent with the terminology that is now used in Version 7.0 of the National ITS Architecture.
- ITS Deployment Plan – The Deployment Plan documents planned and potential ITS projects that could be implemented in the region to provide the ITS services that stakeholders identified as important to the Region.
- Use and Maintenance Plan – The use and maintenance plan describes how to use the Regional ITS Architecture for ITS planning and design efforts, such as the development of a Systems Engineering Analysis. It also describes how the Regional ITS Architecture should be maintained in the future.

ITS architectures satisfy the conformity requirements first established in the Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21) highway bill and continued in the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) bill passed in 2005 and the Moving Ahead for Progress in the 21<sup>st</sup> Century (MAP-21) bill passed in 2012. In response to Section 5206(e) of TEA-21, the Federal Highway Administration (FHWA) issued a final rule and the Federal Transit Administration (FTA) issued a final policy that required regions implementing any ITS project to have an ITS architecture in place by April 2005. After this date, any ITS projects must show conformance with their regional ITS architecture in order to be

eligible for funding from FHWA or FTA. In order to show this conformance, it is important that any region deploying ITS have an updated regional ITS architecture in place.

The Jackson Regional ITS Architecture update has the same geographic boundaries as the Jackson Area MPO study area. The stakeholders developed the Regional ITS Architecture based on a vision of how they wanted to implement and operate ITS through the year 2040 in the Jackson Region. The ITS Architecture was developed with significant input from local, state, and federal officials. A stakeholder workshop was held with all stakeholders and individual interviews were conducted with many of the stakeholders outside the workshop to solicit input and ensure that the plans reflected the unique needs of the Region. Copies of the draft reports were provided to all stakeholders. The Regional ITS Architecture and Deployment Plan developed reflects an accurate snapshot of existing ITS deployment and future ITS plans in the Region. Needs and priorities of the Region will change over time and in order to remain effective this plan should be periodically reviewed and updated.

## 1.2 The Jackson Region

### 1.2.1 *Geographic Boundaries*

The Jackson Region is defined by the boundaries of the Jackson Area MPO planning boundary, which encompasses all of Madison County in southwestern Tennessee. In **Figure 1**, the Jackson City boundaries and Madison County are shown. The Jackson urban smoothed boundary is shown with the blue line, and the 2010 Jackson urban boundary is shown with the black hatching.

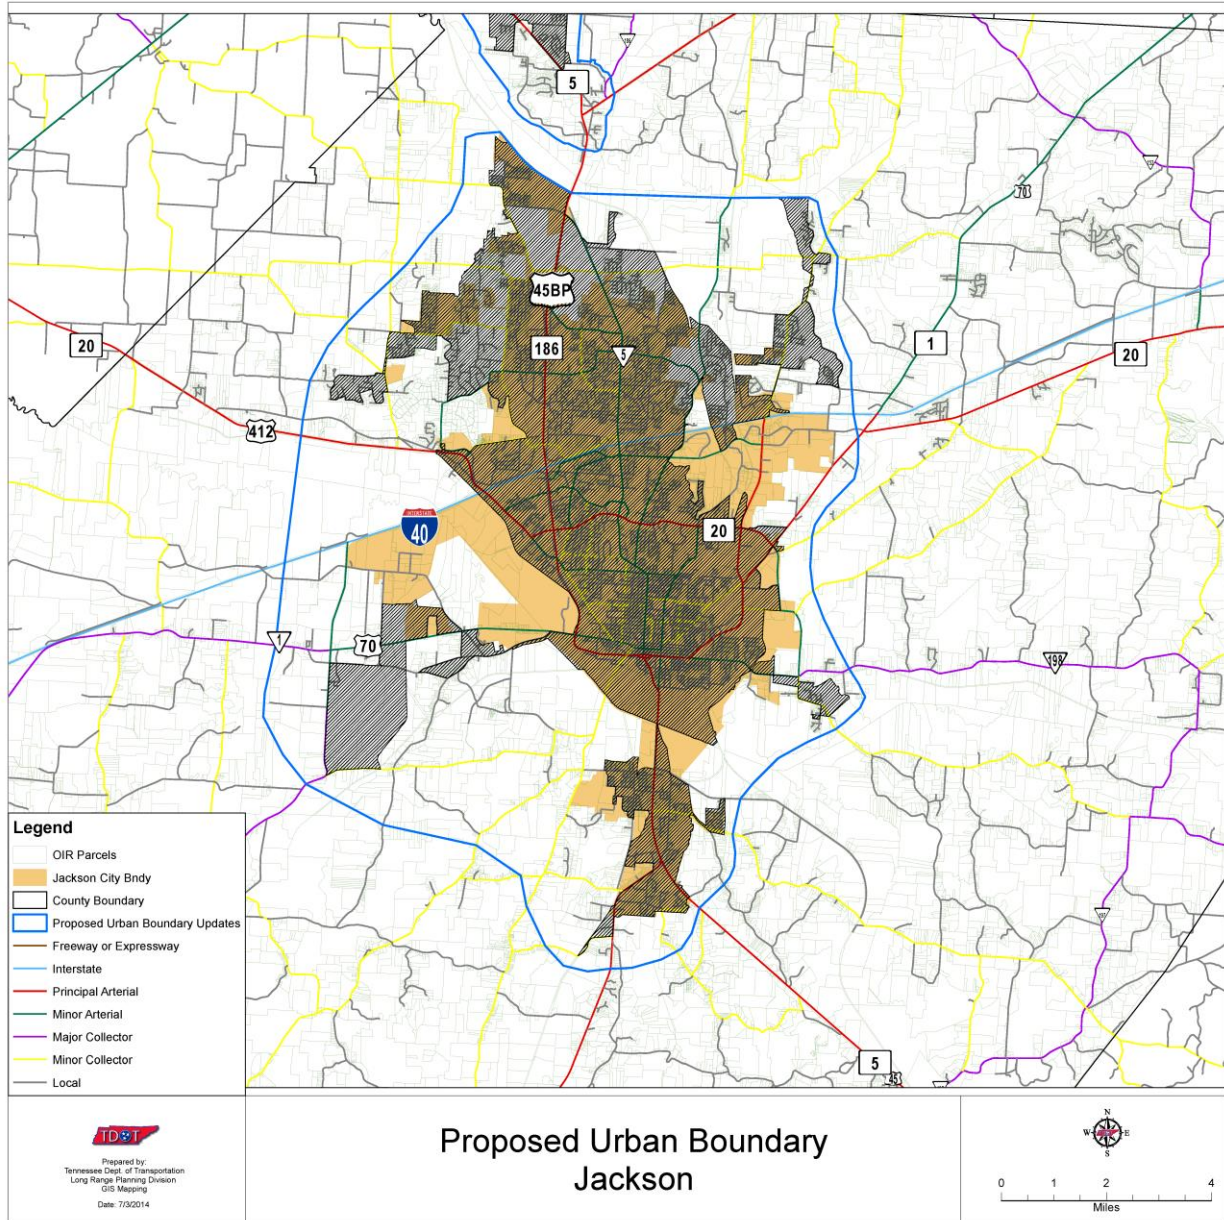

Figure 1 – Jackson Regional Boundaries

### 1.2.2 Transportation Infrastructure

As illustrated in **Figure 1**, the Region is served by several State and Federal highways. The primary roadway facilities include I-40 and US 45.

I-40 is a divided interstate highway that stretches between the coast in Wilmington, North Carolina and I-15 in California. I-40 connects Memphis and Jackson and provides the Region with access to Nashville and Knoxville as well. The future widening of I-40 in Jackson may include TDOT SmartWay ITS field components. These ITS devices, including DMS and CCTV cameras, could be controlled primarily by the TDOT Region 4 TMC in Memphis with supplemental support from expanded TDOT Jackson TMC workstations located in the Region 4 Offices. Neither the TDOT TMC in Memphis nor the TDOT TMC in Jackson currently operate on a continual 24-hour basis; however, the TDOT Region 3 TMC in Nashville currently provides support for Region 4 during after-hour periods. US 45 runs north-south through the Region, connecting Jackson to several of the smaller cities in the Region as well as Mississippi.

### 1.2.3 Project Participants

While Jackson is the largest city in the Region, there are several other smaller communities within the geographic boundaries of the Region. When developing the stakeholder group, the project team coordinated with the MPO to invite the appropriate cities, counties, state and federal agencies, and area transit providers. Stakeholders included both local representatives as well as representatives from TDOT headquarters in Nashville and FHWA from the Tennessee Division Office in Nashville.

Due to the fact that ITS often transcends traditional transportation infrastructure, it is important to involve non-traditional stakeholders in the architecture development and visioning process. Input from these stakeholders, both public and private, is a critical part of defining the interfaces, integration needs, and overall vision for ITS in a region.

The Jackson Transit Authority and Southwest Human Resource Agency (HRA) Transportation are the transit providers that operate within the regional boundaries. The Jackson Transit Authority provides fixed route and paratransit service within the City of Jackson. Southwest HRA Transportation operates demand response service in the rural areas of the Region. A third transit provider, operated by the Northwest Tennessee Human Resource Agency, makes trips into the Region to bring patrons from its service area to medical appointments in the City of Jackson. However, because these trips originate and terminate outside the Region, Northwest HRA Transportation is included in this architecture only where they interact with agencies in the Jackson Region. **Table 1** identifies the stakeholders that participated in the process.

Other stakeholders that were invited to participate but were not able to attend were provided minutes of the workshop and notified when copies of reports were available for review on the project website to encourage their participation as much as possible. A complete listing of stakeholders invited to participate in the project, and a record of workshop attendance and interview participation, is included in the stakeholder database provided in **Appendix D**.

**Table 1 – Jackson Stakeholder Agencies and Contacts**

<b>Stakeholder Agency</b>	<b>Address</b>	<b>Contact</b>
City of Jackson Engineering Department	117 East Main Street, Suite 206 Jackson, Tennessee 38301	Scott Chandler City Engineer
City of Jackson Engineering Department	117 East Main Street, Suite 206 Jackson, Tennessee 38301	Josh Richardson Associate Engineer
City of Jackson Information Systems and Technology Department	101 East Main Street Jackson, TN 38301	Brian Taylor
City of Jackson Mayor's Office	121 East Main Street , Suite 301 Jackson, TN. 38301	Jerry Gist Mayor
City of Jackson Planning Department	111 East Main Street, Suite 201 Jackson, Tennessee 38301	Stanley Pilant Director of Planning
FHWA – Tennessee Division	404 BNA Drive - Building 200, Suite 508 Nashville, TN 37217	Pamela Heimsness Safety & Traffic Operations Team Leader
FHWA – Tennessee Division	404 BNA Drive - Building 200, Suite 508 Nashville, TN 37217	Nick Renna Operations Program Manager
Jackson Area MPO	111 East Main Street, Suite 201 Jackson, Tennessee 38301	Keith C. Donaldson Principal Planner
Jackson Transit Authority	38 Eutah Street Jackson, TN 38301	Cindy Melton Deputy Director
Jackson Transit Authority	38 Eutah Street Jackson, TN 38301	Michele Jackson Marketing/Planning Coordinator
TDOT Long Range Planning Division	5344 Boswell Road Memphis, Tennessee 38120	Aury Kangelos Community Transportation Planner
TDOT Long Range Planning Division	505 Deaderick Street Suite 900, James K Polk Building Nashville, Tennessee 37243	Lia Prince Transportation Project Specialist
TDOT Region 4	300 Benchmark Place Jackson, TN 38301	Jason Baker Region 4 Director (formally Director of Operations)
TDOT Region 4	300 Benchmark Place Jackson, TN 38301	John Thomas Incident Management Coordinator
TDOT Traffic Operations Division	505 Deaderick Street Suite 300, James K Polk Building Nashville, TN 37243	Robert Benshoof ITS Deployments Manager
TDOT Traffic Operations Division	505 Deaderick Street Suite 300, James K Polk Building Nashville, TN 37243	Andrew Christie Transportation Project Specialist
TDOT Traffic Operations Division	505 Deaderick Street Suite 300, James K Polk Building Nashville, TN 37243	Said El Said ITS Program Manager

### 1.3 Document Overview

The Jackson Regional ITS Architecture report is organized into seven key sections:

#### **Section 1 – Introduction**

This section provides an overview of the Jackson Regional ITS Architecture, including a description of the Region and list of participating stakeholders.

#### **Section 2 – Regional ITS Architecture Development Process**

This section provides an overview of the key steps involved in developing the ITS architecture for the Jackson Region as well as an overview of the Turbo Architecture database and reports.

#### **Section 3 – Regional Needs**

This section contains a summary of regional needs for the Jackson Region that are related to ITS.

#### **Section 4 – Regional ITS Inventory**

This section provides a description of the stakeholders and ITS elements in the Region. Elements are grouped based on the owner, such as the City of Jackson or JTA, and their current status is listed as either existing or planned.

#### **Section 5 – Regional ITS Architecture**

This section describes how the National ITS Architecture was customized to meet the ITS needs, plans, and visions for the Jackson Region. The ITS service packages that are included in this section and interconnects are presented, including the “sausage diagram” showing the relationships of the key subsystems and elements in the Region. Functional requirements and standards that apply to the Region, as indicated by the Regional ITS Architecture, are also presented. Operational concepts identifying stakeholder roles and responsibilities have been prepared and potential agreements to support the sharing of data and resources have been identified.

#### **Section 6 – Regional ITS Deployment Plan**

This section describes the ITS projects that regional stakeholders expressed a need to deploy in order to deliver the ITS services identified in the regional ITS architecture. Project descriptions include a target deployment timeframe, responsible agency, an opinion of probable cost, funding status, and applicable ITS service packages.

#### **Section 7 – Use and Maintenance of the Regional ITS Architecture**

This section describes how the Regional ITS Architecture can be used to show architectural conformance of ITS projects in the planning or design phase. A process for maintaining the Regional ITS Architecture and submitting requested changes to the Regional ITS Architecture is also presented.

The Jackson Regional ITS Architecture also contains six appendices:

- Appendix A – Service Package Definitions
- Appendix B – Customized Service Packages
- Appendix C – Element Functions
- Appendix D – Stakeholder Database
- Appendix E – Agreements

- Appendix F – Architecture Maintenance Documentation Form

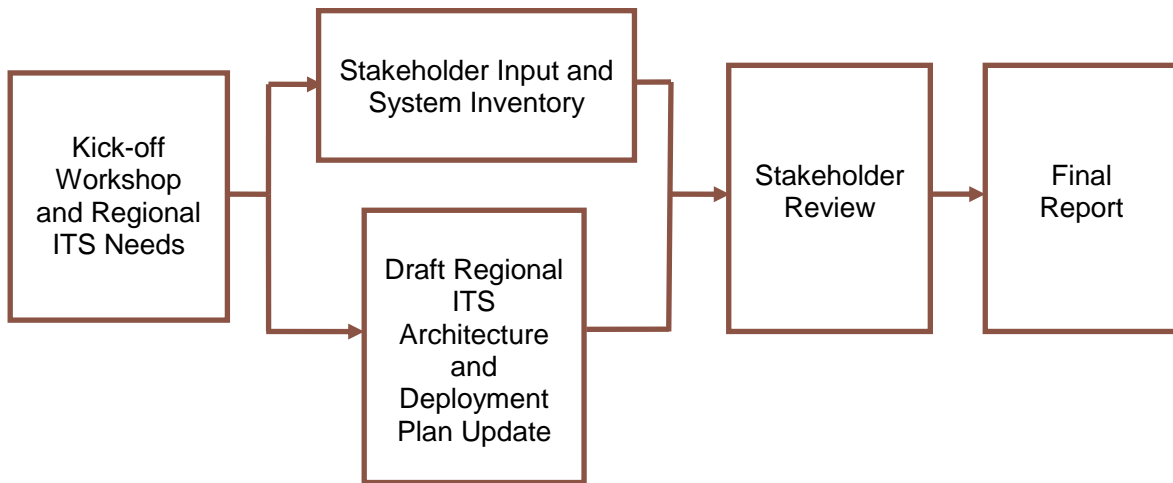

A corresponding website was also developed for the Jackson Regional ITS Architecture which contains electronic versions of all documents, meeting minutes, and an interactive version of the Turbo Architecture database. The website is located at the following address:

**<http://www.kimley-horn.com/projects/tennesseeITSarchitecture/jackson.html>**

## 2. REGIONAL ITS ARCHITECTURE UPDATE PROCESS

The update of the Regional ITS Architecture and Deployment Plan for the Jackson Region relied heavily on stakeholder input to ensure that the architecture reflected local needs. One workshop was held along with a series of stakeholder interviews to gather input, and draft documents were made available to stakeholders for review and comment.

The process followed for the Jackson Region was designed to ensure that stakeholders could provide input and review for the development of the Region’s ITS Architecture and Deployment Plan. **Figure 2** illustrates the process followed.

**Figure 2 – Jackson Regional ITS Architecture and Deployment Plan Development Process**

A kick-off workshop with stakeholders was held to update the Jackson Regional ITS Architecture and Deployment Plan. In addition, interviews were conducted with many of the key stakeholder agencies outside of the workshop to gather additional information for developing the Regional ITS Architecture. Key components of the process are described below:

**Kick-Off Workshop:** A stakeholder group was identified that included representatives from regional transportation, public works, public safety, and emergency management agencies. The group was invited to the project Kick-Off Workshop where an overview of the project was provided, the regional boundaries were defined, existing and planned ITS deployments in the Region were discussed, and ITS needs for the Region were identified.

**Stakeholder Input and System Inventory:** Stakeholder input was gathered through the Kick-Off workshop as well as a series of interviews that were conducted with stakeholder agencies. The interviews were used to complete the system inventory for the region, define how ITS services are currently being operated, define how ITS services could be operated in the future, and identify potential ITS projects for the region.

**Develop Draft Regional ITS Architecture and Deployment Plan Update:** Following the stakeholder input, a draft report was developed which identifies the roles and responsibilities of participating agencies and stakeholders in the operation and implementation of the ITS system, identifies projects for deployment, and establishes a maintenance plan. Additionally, a website

was created to allow stakeholders access to an interactive version of the ITS architecture and documents such as reports, meeting minutes, presentations, and the Turbo Architecture database.

**Stakeholder Review:** Once the draft Regional ITS Architecture report was completed, stakeholders were sent the draft report to review. Comments and suggestions from the stakeholders were incorporated into the final documents.

**Final Report:** The final Regional ITS Architecture and Deployment Plan was developed, which included an executive summary, project report, Turbo Architecture database, and project website with an interactive version of the Regional ITS Architecture.

### **Turbo Architecture Software**

Turbo Architecture Version 7.0 was used to develop the Jackson Regional ITS Architecture. Turbo Architecture is a software application that was developed by the United States Department of Transportation (USDOT) to be used as a tool for documenting and maintaining ITS architectures. Version 7.0 of Turbo Architecture was released in February 2012 and was developed to support Version 7.0 of the National ITS Architecture. Use of the Turbo Architecture software in development of the regional ITS architectures is recommended by both the FHWA and FTA.

In the Jackson Region, the Turbo Architecture database that was developed was based on the ITS service packages which are provided in **Appendix B** of this report. The ITS service packages provide a graphical representation of the services stakeholders in the Region would like ITS to provide. In each service package, the elements, such as a TMC or a CCTV camera, and the data that is shared between them are shown. Turbo Architecture allows the Region to document all of the elements and data flows that exist or are planned in the Region. Turbo Architecture also allows the user to quickly access any standards that are associated with the data flows as well as generate reports and diagrams to assist in reviewing the data. Some examples of the useful reports and diagrams that may be generated using the Turbo Architecture software are included in **Table 2**.

Turbo Architecture saves data in Microsoft Access compatible data files. Turbo Architecture files can be accessed using Microsoft Access, although use of Access will not provide nearly the same amount of capabilities as accessing the files using the Turbo Architecture software. The USDOT provides the Turbo Architecture software free of charge for those that wish to download the software. It is available on the National ITS Architecture website located at <http://www.iteris.com/itsarch/>. At the time this report was written, Version 7.0 was the most recent version available.

**Table 2 – Turbo Architecture Report and Diagrams**

Report or Diagram Name	Functions
Stakeholder Report	Provides a description of the stakeholder and the associated elements for each stakeholder in the Regional ITS Architecture.
Inventory Report	Provides a description and status for each element in the Regional ITS Architecture.
Service Packages Report	Identifies each of the service packages selected for the Region and the elements associated with each service package.
Functional Requirements Report	Identifies the functions that each element provides.
Interconnect Report	Identifies for each element all of the other elements that are connected and the status of each connection.
Standards Activities Report	Identifies relevant standards associated with each of the data flows used in the Regional ITS Architecture.
Subsystem Diagram	Identifies the subsystems from the National ITS Architecture that are included in the Regional ITS Architecture.
Interconnect Diagrams	Identifies for each element all of the other elements that are connected and the status of each connection. The Interconnect Diagrams can be customized to show all elements in the Regional ITS Architecture or a single element can be selected so that only the connections it has with other elements are shown. Interconnect Diagrams can also be viewed by individual service packages to view all of the elements and connections in each service package.
Flow Diagrams	Flow Diagrams are similar to Interconnect Diagrams; however, the actual data flows that are part of each connection between elements are also shown.

### 3. REGIONAL ITS NEEDS

Regional needs that could be addressed by ITS were identified by stakeholders in the Jackson Regional ITS Architecture workshop held in October 2014 and interviews conducted in October and November 2014. In addition, the Jackson Area MPO 2040 Long Range Transportation Plan (LRTP) was reviewed to determine other regional needs that could possibly be addressed in some way through ITS.

.Within the 2040 LRTP, there were five local goals that were identified to help direct decisions regarding transportation for the Jackson Region. Of the five local goals, ITS can directly support three as described below:

**Manage and Operate an Efficient Transportation System:** ITS can be used to provide real-time information about current conditions allowing travelers to make more informed decisions, and adaptive traffic signal systems can respond to changing traffic patterns. ITS is also a critical part of incident management, such as the use of the TDOT HELP trucks to manage traffic during an incident. Incidents make up a large part of the congestion experienced in most urban areas, and improved incident management can reduce non-recurring congestion.

**Support Multi-modal and Mobility Needs:** ITS in transit operations can assist riders by providing accurate information for trip planning, real-time transit vehicle location information, and transit signal priority to help keep transit vehicles on schedule. ITS can be used to optimize the travel times of transit users through vehicle tracking and improve multimodal coordination as transit users transfer between modes.

**Develop a Safe and Secure Transportation System:** ITS can be used to monitor infrastructure, improve incident detection time, and provide advanced warning of incidents or other potential safety issues that might impact travelers.

The needs identified through the Regional ITS Architecture development process as well as the 2040 LRTP provided guidance for determining which ITS service packages should be included in the Regional ITS Architecture. Stakeholders identified a number of ITS needs for the Jackson Region, with the majority of the needs focused on the following six areas:

- Traffic management;
- Emergency management;
- Maintenance and construction management;
- Public transportation management;
- Traveler information; and
- Archived data management.

In Section 5.1.4 a complete list of regional needs is presented along with the ITS service packages that have been recommended for the Region to consider implementing or expanding (if the service package currently exists.) in order to address the needs.

## 4. REGIONAL ITS INVENTORY

The inventory and needs documented during the individual interviews were the starting point for developing an ITS architecture for the Region. These ITS systems and components are used to customize the National ITS Architecture and create the Regional ITS Architecture for the Jackson Region.

The Jackson stakeholder group agreed to create individual traffic, maintenance, and emergency management elements for the City of Jackson. The other smaller cities and towns in the Region were documented as part of the municipal elements. This documentation allows the smaller cities and towns to be included in the Regional ITS Architecture, and therefore eligible to use federal funds for future ITS deployments, even if there are no specific plans for ITS implementation at this time.

### 4.1 Stakeholders

Each element included in the Jackson Regional ITS Architecture is associated with a stakeholder agency. A listing of stakeholders agencies identified in the Jackson Regional ITS Architecture can be found in **Table 3** along with a description of each stakeholder. Most stakeholder agencies are called out by name with exception of smaller municipalities. In the Regional ITS Architecture, the City of Jackson is called out by name, but all other municipalities are covered under the general stakeholder name municipal government.

**Table 3 – Jackson Regional Stakeholder Descriptions**

Stakeholder	Stakeholder Description
City of Jackson	Municipal government for the City of Jackson, TN. Covers all city departments including those that deal with traffic and public safety.
Financial Institution	Handles exchange of money for transit electronic fare collection.
Jackson Energy Authority	Energy provider for the City of Jackson. Also performs traffic signal maintenance.
Jackson Transit Authority	Transit provider that operates both fixed route and paratransit service within the City of Jackson.
Jackson/Madison County Emergency Management Agency	Emergency management agency for the City of Jackson and all of Madison County.
Madison County	County government for Madison County. Covers all county departments including EMS, Fire, Sheriff and Highway Departments.
Media	Local media outlets. This can include television stations, newspapers, radio stations and their associated websites.
Municipal Government	Municipal government for the City of Medon, City of Three Way, and other municipalities within the Region that are not specifically called out. Covers all city departments including those that deal with traffic and public safety.
NOAA	National Oceanic and Atmospheric Administration, agency that gathers weather information and issues severe weather warnings.
Northwest Tennessee Human Resource Agency	Among other Regional social services, the human resource agency operates demand response transit in a service area adjacent to the Jackson Region. While the agency does not serve patrons within the Region, they do enter the Region to bring their patrons to medical appointments in Jackson.
Other Agencies	This stakeholder represents a wide variety of agencies. The associated elements are groups of agencies or providers that do not have a primary stakeholder agency.
Other States	Emergency or traffic management agencies in other states adjacent to Tennessee. In the Jackson Region this includes Arkansas and Mississippi.
Private Information Provider	Private sector business responsible for the gathering and distribution of traveler information. This service is typically provided on a subscription basis.
Rail Operators	Companies that operate trains and/or are responsible for the maintenance and operations of railroad tracks.
Southwest Tennessee Human Resource Agency	Among other Regional social services, the human resource agency operates Southwest HRA Transportation. Southwest HRA provides demand response transit service in the Region outside the Jackson Transit Authority service area.
System Users	All of the users of the transportation system.
TDOT	The Tennessee Department of Transportation is responsible for the construction, maintenance, and operation of roadways in the State of Tennessee.
TEMA	Tennessee Emergency Management Agency. The agency is responsible for emergency operations during a disaster or large scale incident.
Tennessee Bureau of Investigation	Statewide law enforcement agency responsible for issuing statewide Amber Alerts in TN.

**Table 3 – Jackson Regional Stakeholder Descriptions (continued)**

Stakeholder	Stakeholder Description
Tennessee Department of Health and Human Services	State department that manages funding for medical transportation services.
THP	Tennessee Highway Patrol. State law enforcement agency that enforces traffic safety laws as well as commercial vehicle regulations.

**4.2 ITS Elements**

The ITS inventory is documented in the Regional ITS Architecture as elements. **Table 4** sorts the inventory by stakeholder so that each stakeholder can easily identify and review all of the architecture elements associated with their agency. The table includes the status of the element. In many cases, an element classified as existing might still need to be enhanced to attain the service level desired by the Region.

The naming convention used for elements in the Jackson Regional ITS Architecture is consistent with the naming convention used in the Tennessee Statewide ITS Architecture. This consistency provides seamless connections between the Regional and Statewide ITS Architectures within Tennessee.

**Table 4 – Jackson Regional Inventory of ITS Elements**

Stakeholder	Element Name	Element Description	Status
City of Jackson	City of Jackson CCTV Cameras	Closed-circuit television (CCTV) cameras operated by the City of Jackson TOC for traffic condition monitoring and management of incidents.	Planned
	City of Jackson Central Dispatch	Central Dispatch is responsible for the dispatch of all City of Jackson public safety vehicles (police and fire). After hours Central Dispatch will also dispatch the Public Works Division on-call emergency responder.	Existing
	City of Jackson City Engineers Office	Responsible for the administration of maintenance and construction projects within the City.	Existing
	City of Jackson DMS	Permanent dynamic message signs (DMS) for traffic information dissemination operated by the City of Jackson.	Planned
	City of Jackson Engineering Department	The City of Jackson Engineering Department's responsibilities include traffic signs and signalization and street/road/bridge construction and maintenance.	Existing
	City of Jackson Field Sensors	Roadway equipment used to detect vehicle volumes and/or speeds. This information is used in the operation of the traffic signal system and collected by the Traffic Operations Center (TOC). Jackson field sensors include Video Image Vehicle Detection Systems (VIVDS), in-pavement sensing pucks, and any other vehicle detection.	Existing
	City of Jackson Maintenance Management System	Asset management tracking system for the City of Jackson. Utilized to track maintenance requests and service responses.	Planned
	City of Jackson Pedestrian Hybrid Beacons	A beacon that grants right of way to crossing pedestrians at a marked crosswalk.	Existing
	City of Jackson Police Department	City of Jackson Police Department. The emergency dispatch functions for the Police Department are included in the City of Jackson Central Dispatch. The Department is also responsible for the collection of crash data.	Existing
City of Jackson Public Safety Vehicles	Public safety vehicles include City of Jackson Police Department patrol cars and helicopters and Fire Department vehicles. These vehicles may interact with the ITS system through traffic signal preemption or computer-aided dispatching.	Existing	

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

<b>Stakeholder</b>	<b>Element Name</b>	<b>Element Description</b>	<b>Status</b>
City of Jackson (continued)	City of Jackson Public Works Division	Department that oversees the maintenance of streets, sidewalks, and roadway right-of-way.	Existing
	City of Jackson Public Works Division On-Call Emergency Responder	Public Works Division employee on-call for emergency situations requiring the Division’s assistance.	Existing
	City of Jackson Public Works Division Vehicles	Vehicles used in maintenance operations.	Existing
	City Jackson Rail Notification System	Roadway equipment used to alert motorists that a crossing is currently blocked by a train.	Planned
	City of Jackson RWIS Sensors	Road weather information systems (RWIS) installed in the field to gather information about the roadways such as temperature and moisture levels.	Planned
	City of Jackson TOC	Traffic operations center for the City of Jackson. Responsible for operations of the traffic signal system, CCTV cameras, and DMS.	Existing
	City of Jackson Traffic Data Archive	Archive that contains historical traffic data such as volume and speed information.	Planned
	City of Jackson Traffic Signals	Traffic signal system operated by the City of Jackson TOC.	Existing
	City of Jackson Website	Website for the City of Jackson. Includes information on City departments and in the future it is envisioned that the website will have real-time information about roadway conditions.	Existing
	Jackson Area MPO Data Archive	Archive for transportation information such as traffic counts or transit ridership data for use in regional transportation planning.	Planned
Jackson/Madison County Hospital	Hospital located in the City of Jackson serving all of Madison County.	Existing	
Financial Institution	Financial Service Provider	Handles exchange of money for transit electronic payment collection.	Planned
Jackson Energy Authority	Jackson Energy Authority	Energy provider for the City of Jackson. Also performs traffic signal maintenance.	Existing

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

<b>Stakeholder</b>	<b>Element Name</b>	<b>Element Description</b>	<b>Status</b>
Jackson Transit Authority	Electronic Fare Payment Card	Medium for collection of transit fares electronically.	Planned
	Jackson Transit Authority Bus Stop DMS	Jackson Transit Authority real-time next bus arrival information boards.	Existing
	Jackson Transit Authority Data Archive	The Transit Data Archive for the city of Jackson. Used by National Transit Database, Federal Transit Administration, and TDOT Office of Passenger Transportation.	Existing
	Jackson Transit Authority Dispatch Center	Transit dispatch center responsible for the tracking, scheduling and dispatching of fixed route and paratransit vehicles operated by Jackson Transit Authority.	Existing
	Jackson Transit Authority Fixed-Route Vehicles	Transit vehicles that operate on fixed routes within Jackson.	Existing
	Jackson Transit Authority Kiosks	Kiosks for dissemination of transit traveler information. Kiosks can also be used for the purchase and recharging of electronic fare payment cards.	Planned
	Jackson Transit Authority Office of General Manager	Jackson Transit Authority office that monitors CCTV camera surveillance system.	Existing
	Jackson Transit Authority Paratransit Vehicles	Jackson Transit Authority vehicles that provide transit means for disabled travelers.	Existing
	Jackson Transit Authority Transit Center CCTV Surveillance	CCTV surveillance at the Jackson Transit Authority Transit Center.	Existing
	Jackson Transit Authority Website	Website with information about fares and schedules. At this time the website is static.	Existing
Jackson/Madison County Emergency Management Agency	Jackson/Madison County EMA	Emergency management agency for all of Madison County, including the City of Jackson. Responsible for communications with Tennessee Management Emergency Agency (TEMA) and coordination of local resources during a disaster or large scale incident.	Existing
Madison County	Madison County Emergency Communications District (9-1-1 Dispatch)	Answers all 911 calls made from within the county and then forwards the call to the appropriate dispatcher.	Existing
	Madison County EMS Dispatch	Receives 911 calls from Madison County E911 Dispatch and in turn dispatches Emergency Medical Services (EMS) vehicles for Madison County, including the City of Jackson.	Existing
	Madison County EMS Vehicles	Vehicles operated by Madison County EMS.	Existing

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

Stakeholder	Element Name	Element Description	Status
Madison County (continued)	Madison County Fire Dispatch	Receives 911 calls from Madison County E911 Dispatch and in turn dispatches fire vehicles for Madison County, outside the City of Jackson.	Existing
	Madison County Fire Vehicles	Vehicles operated by the Madison County Fire Department	Existing
	Madison County Highway Department	County department that oversees the maintenance of county roadways within the region.	Existing
	Madison County Sheriff Dispatch	Receives 911 calls from Madison County E911 Dispatch and in turn dispatches sheriff vehicles within Madison County.	Existing
	Madison County Sheriff Vehicles	Vehicles operated by the Madison County Sheriff's Department	Existing
Media	Local Print and Broadcast Media	Local media that provide traffic or incident information to the public.	Existing
Municipal Government	Municipal Public Safety Dispatch	Responsible for the dispatch of municipal public safety vehicles.	Planned
	Municipal Public Safety Vehicles	Municipal law enforcement, fire, and EMS vehicles.	Planned
	Municipal TOC	Municipal Traffic Operations Center responsible for municipal signal system operations.	Planned
	Municipal Traffic Signals	Municipal traffic signal systems	Existing
NOAA	National Weather Service	Provides official US weather, marine, fire and aviation forecasts, warnings, meteorological products, climate forecasts, and information about meteorology.	Planned
Northwest Tennessee Human Resource Agency	Northwest HRA Transportation Dispatch Center	Responsible for the dispatch and scheduling of demand response transit trips within the agency's service area. Northwest HRA Transportation enters the Jackson Region to take its patrons to medical appointments in the City of Jackson, but no trips originate within the Region.	Existing
Other Agencies	Other Maintenance and Construction Management Agencies	Additional maintenance and construction operations with which information is shared for coordination in an emergency situation.	Planned
	Other Traffic Management Agencies	Additional traffic management agencies with which information is shared for coordination in an emergency situation.	Planned
	Private Transportation Providers	Private providers of transportation services in the Region such as taxis and intercity bus services.	Planned

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

Stakeholder	Element Name	Element Description	Status
Other States	Arkansas DOT	Arkansas State Highway and Transportation Department, responsible for the maintenance and operations of roadways in the State of Arkansas.	Existing
	Mississippi DOT	Mississippi Department of Transportation, responsible for the maintenance and operations of roadways in the State of Mississippi.	Existing
Private Information Provider	Private Sector Traveler Information Services	Subscription based traveler information service.	Existing
	Social Networking Services	Subscription based services operated by private providers that provide an option for real-time traveler information dissemination. Examples of such services include Facebook or Twitter.	Existing
Rail Operators	Rail Operator Wayside Equipment	Equipment located along the tracks including railroad crossing gates, bells, and lights as well as the interface to the traffic signal controller indicating the presence of a train.	Existing
Southwest Tennessee Human Resource Agency	Southwest HRA Transportation Data Archive	Data Archive for Southwest HRA Transportation used by the Tennessee Department of Transportation and the Southwest HRA.	Planned
	Southwest HRA Transportation Dispatch Center	Transit dispatch center responsible for the tracking, scheduling and dispatching of demand response vehicles operated by Southwest HRA.	Existing
	Southwest HRA Transportation Vehicles	Southwest HRA demand response vehicles.	Existing
	Southwest HRA Transportation Website	Website with information about fares and trip scheduling. At this time the website contains static information.	Existing
System Users	Archive Data Users	Those who request information from the data archive systems.	Planned
	Driver	Individual operating a vehicle on roadways within the Region.	Existing
	Private Traveler Personal Computing Devices	Computing devices that travelers use to access public information.	Planned
	Public/Private Vehicles	Public or private vehicles that traverse the region.	Existing
	Traveler	Caller seeking information from 511 system.	Existing
TDOT	Other TDOT Region District Operations Maintenance	Other Tennessee Department of Transportation regional maintenance and construction offices.	Existing
	TDOT CCTV Cameras	CCTV cameras for traffic surveillance and incident management.	Planned
	TDOT Changeable Speed Limit Signs	TDOT roadway equipment that can change the speed limit depending on roadway and traffic conditions.	Planned

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

Stakeholder	Element Name	Element Description	Status
TDOT (continued)	TDOT Community Relations Division	Tennessee Department of Transportation division responsible for the dissemination of traffic information to the media and the public.	Existing
	TDOT DMS	DMS for traffic information dissemination.	Planned
	TDOT Emergency Services Coordinator	The Tennessee Department of Transportation emergency services coordinator is responsible for managing the TDOT response in a large scale incident or disaster in which TEMA activates the state Emergency Operations Center (EOC).	Existing
	TDOT Field Sensors	Roadway equipment used to detect vehicle volumes and/or speeds. Includes equipment such as VIVDS, Remote Traffic microwave Sensor (RTMS) or traditional loops.	Planned
	TDOT HAR	Highway advisory radio for traffic information dissemination.	Planned
	TDOT HELP Vehicles	Roadway service patrol vehicles. Currently operate in Memphis and are dispatched to the Jackson Region for special events or large incidents.	Planned
	TDOT Jackson TMC	The TDOT Jackson TMC is currently a work station within the TDOT Region 4 Office that can support the TDOT Region 4 TMC in Memphis. The TDOT Jackson TMC will have expanded capabilities in the future as ITS equipment in the Jackson Region is implemented; however, the TDOT Region 4 TMC in Memphis will remain the primary TMC for Region 4.	Existing
	TDOT Long Range Planning Division Archive	Data archive for the Long Range Division. The Division is responsible for traffic data collection and analysis.	Planned
	TDOT Maintenance Headquarters	The Tennessee Department of Transportation's maintenance department headquarters.	Planned
	TDOT Maintenance Vehicles	Tennessee Department of Transportation vehicles used in maintenance operations.	Existing
	TDOT Ramp Metering Equipment	TDOT roadway equipment used in the operation of a ramp metering system. Includes the signals and any other ITS equipment.	Planned
	TDOT Region 1 TMC – Knoxville	Traffic management center for Region 1, located in Knoxville. Responsible for the operation of the ITS equipment located in Region 1. This includes the freeway management system in Knoxville as well as rural ITS deployments.	Existing

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

Stakeholder	Element Name	Element Description	Status
TDOT (continued)	TDOT Region 2 TMC – Chattanooga	Traffic management center for Region 2, located in Chattanooga. Responsible for the operation of the ITS equipment located in Region 2. This includes the freeway management system in Chattanooga as well as rural ITS deployments.	Existing
	TDOT Region 3 TMC – Nashville	Traffic management center for Region 3, located in Nashville. Responsible for the operation of the ITS equipment located in Region 3. This includes the freeway management system in Nashville as well as rural ITS deployments.	Existing
	TDOT Region 4 District Operations	TDOT office that manages roadway maintenance and construction projects and responds to incidents when services are requested by local emergency management in Region 4.	Existing
	TDOT Region 4 Engineers Office	The Region Engineer's office is responsible for administration of maintenance and construction projects within the Region as well as communicating work zone information to the public through the Community Relations Officer.	Existing
	TDOT Region 4 HELP Dispatch	Roadway service patrol dispatch center located in Memphis. Currently service is limited to the Memphis area except in the case of a large scale incident or special events.	Existing
	TDOT Region 4 TMC – Memphis	Traffic management center for Region 4, located in Memphis. Responsible for the operation of the ITS equipment located in Region 4. This includes the freeway management system in Memphis as well as rural ITS deployments. The Jackson Region is located in Region 4.	Existing
	TDOT RWIS Sensors	Road weather information system sensors to monitor road conditions.	Planned
	TDOT Smart Work Zone Equipment	Portable ITS equipment that can be used in work zones to more efficiently manage traffic and provide traveler information. Includes CCTV, vehicle detection, and/or DMS.	Planned
	TDOT SmartWay Mobile App	Mobile phone application that allows users to view traffic images, receive incident information, and monitor traffic speeds.	Existing
TDOT SmartWay Website	Website providing road network conditions information. Much of the information for the website comes from SWIFT. In areas that have an operational TDOT Region TMC, additional information may be available such as camera views.	Existing	

**Table 4 – Jackson Region Inventory of ITS Elements (continued)**

<b>Stakeholder</b>	<b>Element Name</b>	<b>Element Description</b>	<b>Status</b>
TDOT (continued)	TDOT Statewide Information for Travelers (SWIFT)	SWIFT is a statewide roadways conditions database. Currently information can be entered by District and Regional maintenance personnel as well as staff at any of the traffic management centers (TMCs) and the Tennessee Highway Patrol (THP). SWIFT feeds the Statewide 511 system and SmartWay website.	Existing
	TDOT Wrong-Way Detection and Warning Equipment	Electronic warning signs, field sensors, or other devices used in the operation of wrong-way vehicle detection and warning.	Planned
	Tennessee 511 IVR	Tennessee 511 Interactive Voice Response (IVR) system. TDOT contracts the IVR operation to a vendor. The IVR accepts 511 callers' requests and provides responses to specific traveler information needs. This is the customer interface component of the 511 system.	Existing
	Tennessee 511 System	511 Traveler information system central server.	Existing
TEMA	TEMA	The Tennessee Emergency Management Agency manages emergency operations during a disaster or large scale incident.	Existing
Tennessee Bureau of Investigation	Tennessee Bureau of Investigation	Responsible for issuing statewide AMBER Alerts in Tennessee.	Existing
Tennessee Department of Health and Human Services	Service Agency	Agency responsible for payment of transit fares for medical transportation as part of government subsidized medical care. This includes TennCare, Medicare, and Veteran Affairs programs.	Existing
THP	THP Dispatch	Tennessee Highway Patrol (THP) dispatch center. There are several THP dispatch centers around the State.	Existing
	THP Vehicles	THP vehicles.	Planned
	TITAN Database	The Tennessee Integrated Traffic Analysis Network is the Tennessee Department of Safety crash record database maintained by THP for the collection of crash record information. TITAN interfaces with the TraCS (Traffic and Criminal Software) system.	Existing

## 5. REGIONAL ITS ARCHITECTURE

Upon completion of the system inventory, the next step in the development of the Regional ITS Architecture was to identify the ITS services that are important to the Jackson Region. The National ITS Architecture has the following eight groups of ITS service areas:

- **Traffic Management** – includes the TDOT SmartWay TMC in Memphis as well as other existing and future TMCs and traffic operations centers (TOCs), detection systems, CCTV cameras, fixed and portable dynamic message signs (DMS), and other related technologies.
- **Emergency Management** – includes emergency operations/management centers, improved information sharing among traffic and emergency services, automated vehicle location (AVL) on emergency vehicles, traffic signal preemption for emergency vehicles, and wide-area alerts.
- **Maintenance and Construction Management** – includes work zone management, roadway maintenance and construction information, and road weather detection systems.
- **Public Transportation Management** – includes transit and paratransit AVL, transit travel information systems, electronic fare collection, and transit security.
- **Commercial Vehicle Operations** – includes coordination with the Commercial Vehicle Information Systems and Networks (CVISN) effort.
- **Traveler Information** – includes broadcast traveler information, traveler information kiosks, and highway advisory radio (HAR).
- **Archived Data Management** – includes electronic data management and archiving systems.
- **Vehicle Safety** – these systems were discussed, but at this time this service group is primarily a private sector initiative to incorporate technologies such as intersection collision avoidance and automated vehicle operation systems into vehicles.

Existing, planned, and future systems in the Region were considered in each of the service areas. Vehicle Safety was not included in the Jackson Regional ITS Architecture because implementation of those service packages would primarily be by private sector automobile manufacturers and information service providers. Additionally, Commercial Vehicle Operations was not included as it is viewed as more of a statewide effort and there was no expressed need by stakeholders to include this service on a regional level at this time.

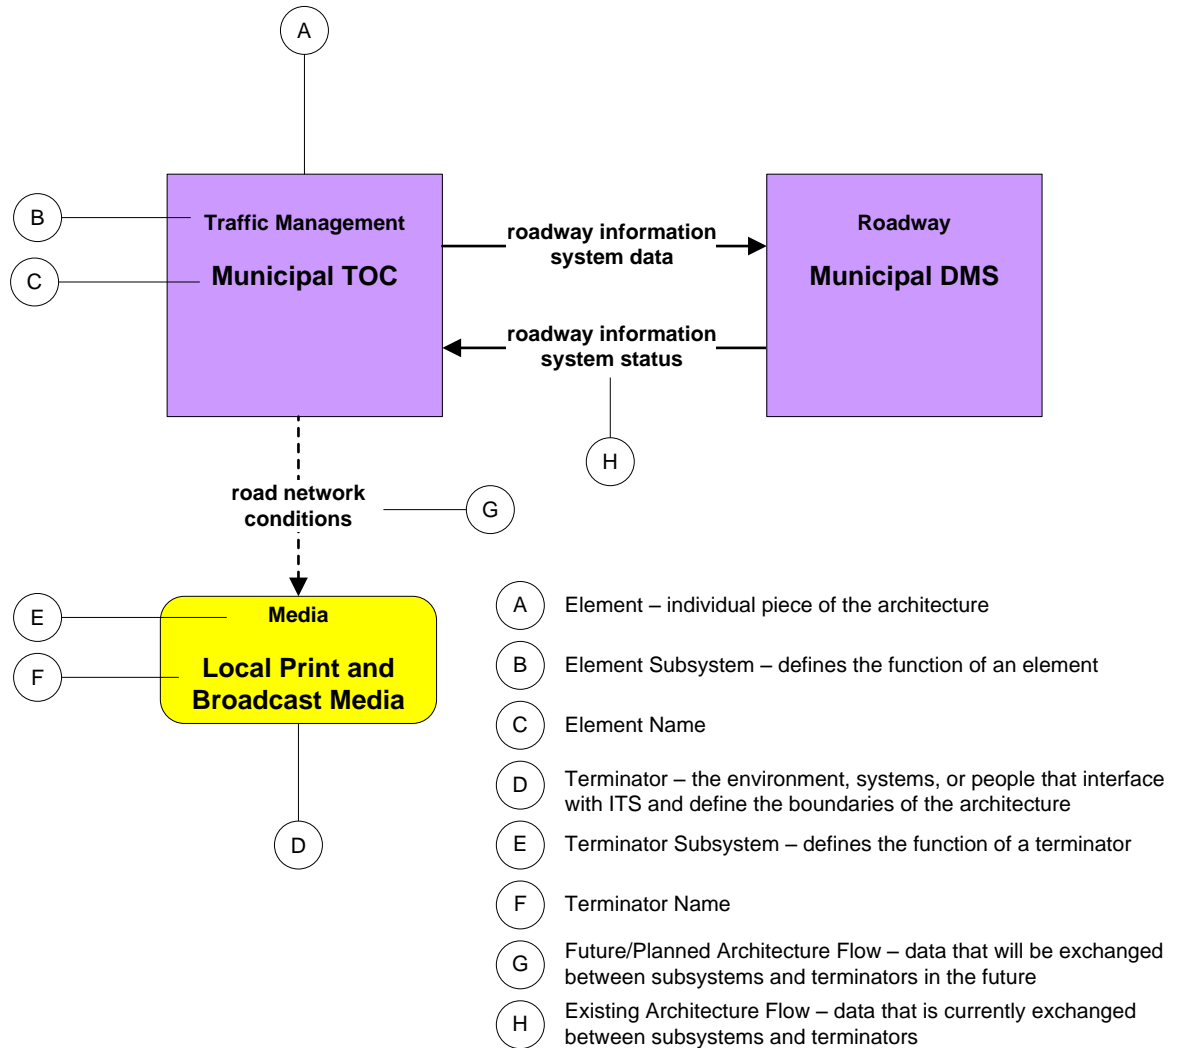

### 5.1 ITS Service Packages

In the National ITS Architecture, services that are provided by ITS are referred to as ITS service packages. ITS service packages can include several stakeholders and elements that work together to provide a service in the Region. Examples of ITS service packages from the National ITS Architecture include Network Surveillance, Traffic Information Dissemination, and Transit Vehicle Tracking. There are currently a total of 97 ITS service packages identified in the National ITS Architecture Version 7.0, which was the most recent version available of the National ITS Architecture at the time of the 2015 Jackson Regional ITS Architecture update. As noted in Section 1.1, in the previous version of the Jackson Regional ITS Architecture, ITS service packages were referred to as ITS market packages. The name change has been made to be consistent with the terminology that is now used in Version 7.0 of the National ITS Architecture.

#### 5.1.1 Overview of ITS Service Package Structure

An ITS service package is made up of elements and data flows. Each identified system or component in the Jackson regional ITS inventory, which is documented in the previous

section, was mapped to a subsystem or terminator in the National ITS Architecture. Subsystems and terminators represent the various functional categories that define the role of an element in ITS and the regional architecture. The elements are connected together by architecture flows that document the existing and planned flow of information. **Figure 3** depicts a sample service package with each of the components identified. Additional explanation of the terminology used can be found after the figure.

**Figure 3 – Overview of ITS Service Package Structure**

*Elements* represent the ITS inventory for the Region. Both existing and planned elements have been included in the inventory and incorporated into the architecture through the development of the service package diagrams.

*Subsystems* are the highest level building blocks of the physical architecture, and the National ITS Architecture groups them into four major classes: Centers, Field, Vehicles, and Travelers. Each of these major classes includes various subsystems that represent a set

of transportation functions (or processes). Each set of functions is grouped under one agency, jurisdiction, or location, and correspond to physical elements such as: traffic operations centers, traffic signals, or vehicles. Each element is assigned to one or more subsystems.

*Terminators* are the people, systems, other facilities, and environmental conditions outside of ITS that need to communicate or interface with ITS subsystems. Terminators help define the boundaries of the National ITS Architecture as well as a regional system. Examples of terminators include drivers, weather services, and information service providers.

*Architecture Flows* provide a standardized method for documenting the types of information that transfer between elements. A flow can be shown as either existing or future/planned. Existing flows indicate a connection that has already been established to share at least a portion of the desired information, but showing a flow as existing is not meant to imply that the function is complete. For example, the traffic information coordination flow between traffic management agencies includes the sharing of video images, incident information and other relevant data. The flow could be shown as existing to capture the sharing of video images while incident information is still a desired expansion of functionality. Many of the architecture flows have associated technical specifications, known as standards, which define the format of the data being shared.

### 5.1.2 Selection and Prioritization of Regional ITS Service Packages

In the Jackson Region, the National ITS Architecture service packages were reviewed by the stakeholders and selected based on the relevance of the functionality that the ITS service package could provide to the Region. Stakeholders selected 37 ITS service packages for implementation in the Region, and they are identified in **Table 5**. Stakeholders prioritized the selected service packages during the interviews and stakeholder reviews, and the table organizes the service packages into service areas and priority groupings.

TDOT is leading a separate effort to develop and implement the CVISN program. CVISN addresses commercial vehicle operations, including ITS, on a statewide level and includes such applications as electronic clearance, safety enforcement, and registration. Unless a specific need was identified in the Jackson Region that could be addressed locally, the commercial vehicle operations service packages were not selected and instead will be covered in the CVISN effort to ensure consistency.

After selecting the ITS service packages that were applicable for the Region, stakeholders reviewed each ITS service package and the elements that could be included to customize it for the Region. This customization is discussed further in the next section (Section 5.1.3).

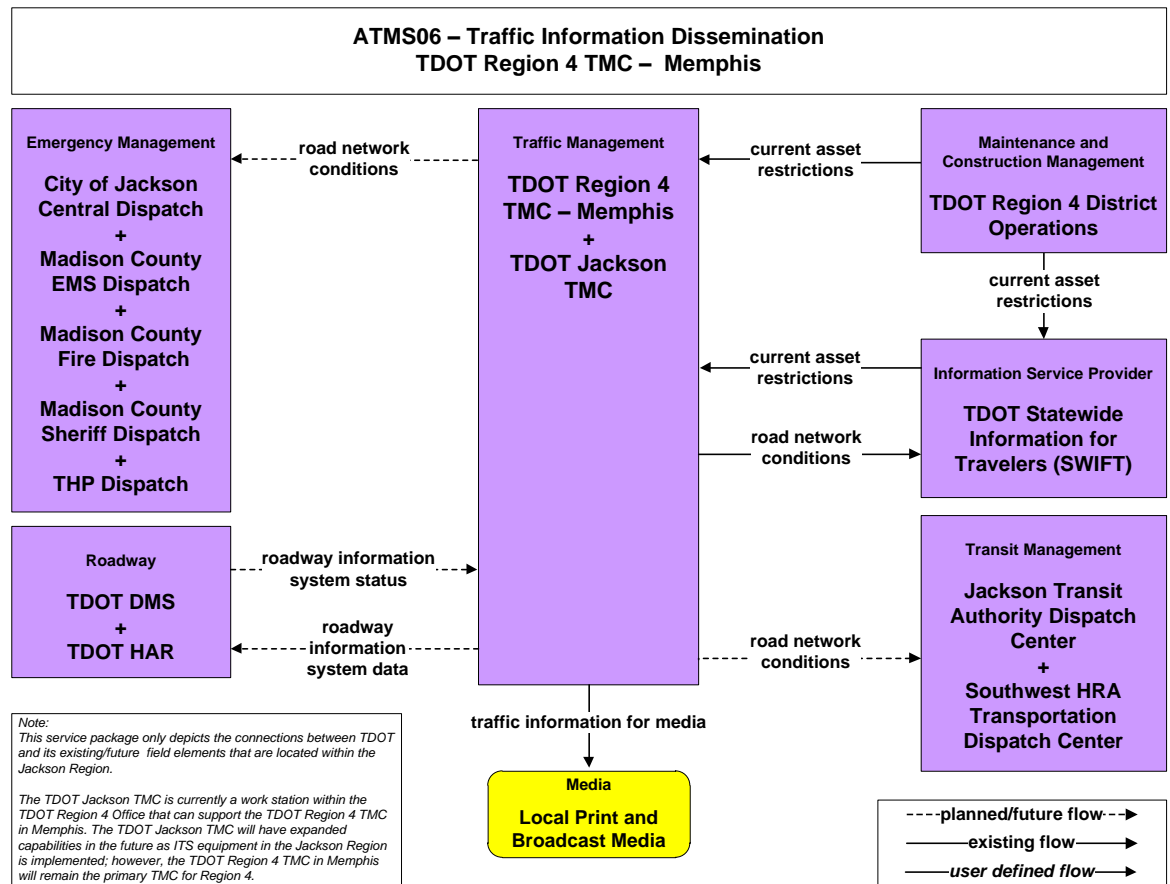

**Table 5 – Jackson Regional ITS Service Package Prioritization by Functional Area**

High Priority Service Packages	Medium Priority Service Packages	Low Priority Service Packages
<b><i>Travel and Traffic Management</i></b>		
ATMS01 Network Surveillance ATMS02 Traffic Probe Surveillance ATMS03 Traffic Signal Control ATMS04 Traffic Metering ATMS06 Traffic Information Dissemination ATMS08 Traffic Incident Management System ATMS26 Mixed Use Warning Systems	ATMS07 Regional Traffic Control ATMS13 Standard Railroad Grade Crossing	ATMS22 Variable Speed Limits ATMS24 Dynamic Roadway Warning
<b><i>Emergency Management</i></b>		
EM01 Emergency Call-Taking and Dispatch EM02 Emergency Routing EM06 Wide-Area Alert EM10 Disaster Traveler Information	EM04 Roadway Service Patrols EM08 Disaster Response and Recovery EM09 Evacuation and Reentry Management	
<b><i>Maintenance and Construction Management</i></b>		
MC03 Road Weather Data Collection MC04 Weather Information Processing and Distribution MC08 Work Zone Management MC10 Maintenance and Construction Activity Coordination	MC01 Maintenance and Construction Vehicle and Equipment Tracking MC07 Roadway Maintenance and Construction	
<b><i>Public Transportation Management</i></b>		
APTS01 Transit Vehicle Tracking APTS02 Transit Fixed-Route Operations APTS03 Demand Response Transit Operations APTS05 Transit Security	APTS04 Transit Fare Collection Management APTS07 Multi-modal Coordination APTS08 Transit Traveler Information	APTS06 Transit Fleet Maintenance APTS11 Multimodal Connection Protection
<b><i>Traveler Information</i></b>		
ATIS01 Broadcast Traveler Information ATIS02 Interactive Traveler Information		
<b><i>Archived Data Management</i></b>		
	AD1 ITS Data Mart	AD3 Virtual ITS Data Warehouse

### 5.1.3 Customization of Regional ITS Service Packages

The ITS service packages in the National ITS Architecture were customized to reflect the unique systems, subsystems, and terminators in the Jackson Region. ITS service packages represent a service that will be deployed as an integrated capability. Each service package is shown graphically with the service package name, local agencies involved, and desired data flows. The data flows are shown as either existing or planned/future. Data flows shown as existing indicate that in at least one location within the jurisdiction, the connection exists. Data flows shown as existing should not be interpreted to mean that deployment of that service is complete as there are many cases where a data flow exists in a service, but a need has been identified to expand the service to additional locations.

**Figure 4** is an example of an Advanced Traffic Management System (ATMS) service package for traffic information dissemination that has been customized for the Region. This instance focuses on the activities of TDOT. The ITS service package shows the distribution of traffic information from the TDOT Region 4 TMC to THP dispatch and the media as well as in the future to local emergency dispatch and transit management agencies. Messages are also placed on DMS and HAR and entered into SWIFT for inclusion on the SmartWay website and mobile phone app as well as 511. Data flows between the subsystems indicate what information is being shared. The remainder of the ITS service packages that were customized for the Jackson Region are shown in **Appendix B**.

**Figure 4 – Example ITS Service Package Diagram: ATMS06 – Traffic Information Dissemination (TDOT Region 4 TMC - Memphis)**

#### 5.1.4 *Regional Needs and Corresponding ITS Service Packages*

Input received from stakeholders at the Jackson ITS Architecture workshop and stakeholder interviews provided valuable input for the ITS service package customization process. The needs identified in the ITS Architecture workshop, as well as needs from Jackson Area MPO's 2040 Long Range Transportation Plan (LRTP) are identified in **Table 6**. The table also identifies which ITS service packages could be implemented to address the particular need.

**Table 6 – Jackson Regional ITS Needs and Corresponding ITS Service Packages**

ITS Need	Corresponding ITS Service Packages
<b>Traffic Management and Traveler Information</b>	
Need to manage and operate an efficient transportation system	ATMS01 – Network Surveillance ATMS02 – Traffic Probe Surveillance ATMS03 – Traffic Signal Control ATMS04 – Traffic Metering ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management System ATMS22 – Variable Speed Limits
Need to support multi-modal and mobility needs	ATMS03 – Traffic Signal Control ATMS26 – Mixed use Warning Systems APTS01 – Transit Vehicle Tracking APTS02 – Transit Fixed-Route Operations APTS03 – Demand Response Transit Operations APTS07 – Multi-modal Coordination APTS08 – Transit Traveler Information APTS11 – Multimodal Connection Protection
Need to develop a safe and secure transportation system	ATMS01 – Network Surveillance ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management ATMS22 – Variable Speed Limits ATMS24 – Dynamic Roadway Warning EM02 – Emergency Routing EM04 – Roadway Service Patrols EM06 – Wide Area Alerts EM10 – Disaster Traveler Information
Need to reduce traffic congestion along major routes within the MPO area	ATMS01 – Network Surveillance ATMS02 – Traffic Probe Surveillance ATMS03 – Traffic Signal Control ATMS04 – Traffic Metering ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management System ATMS22 – Variable Speed Limits ATMS24 – Dynamic Roadway Warning EM04 – Roadway Service Patrols MC08 – Work Zone Management MC10 – Maintenance and Construction Coordination

**Table 6 – Jackson Regional ITS Needs and Corresponding ITS Service Packages (continued)**

ITS Need	Corresponding ITS Service Packages
<b><i>Traffic Management and Traveler Information (continued)</i></b>	
Need to expand the interconnected traffic signal system network	ATMS03 – Traffic Signal Control
Need to integrate CCTV camera coverage throughout the Region	ATMS01 – Network Surveillance
Need for better coordination among various agencies during large-scale events	ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management System EM01 – Emergency Call Taking and Dispatch EM02 – Emergency Routing EM08 – Disaster Response and Recovery EM09 – Evacuation and Reentry Management EM10 – Disaster Traveler Information MC10 – Maintenance and Construction Activity Coordination APTS07 – Multi-modal Coordination
Need to convey information to drivers through dynamic message signs, highway advisory radio, social media, television, or other methods	ATMS06 – Traffic Information Dissemination ATMS24 – Dynamic Roadway Warning ATIS01 – Broadcast Traveler Information ATIS02 – Interactive Traveler Information
Need to monitor rail crossing and convey blockages to drivers	ATMS13 – Standard Railroad Grade Crossing
<b><i>Emergency Management</i></b>	
Need to assist emergency vehicle movement with traffic signal preemption and monitoring	ATMS03 – Traffic Signal Control EM01 – Emergency Call-Taking and Dispatch EM02 – Emergency Routing
Need to expand roadway service patrols for motorist assistance and incident management	ATMS08 – Traffic Incident Management System EM04 – Roadway Service Patrols
<b><i>Maintenance and Construction Management</i></b>	
Need to monitor roadway weather conditions and provide accurate dissemination to agencies and travelers	ATMS06 – Traffic Information Dissemination ATMS24 – Dynamic Roadway Warning EM07 – Early Warning System MC03 – Road Weather Data Collection MC04 – Weather Information Processing and Distribution MC06 – Winter Maintenance
Need for better coordination between TDOT and local agencies during maintenance and construction. Focus in the coming years will be on widening of I-40.	MC08 – Work Zone Management MC10 – Maintenance and Construction Coordination

**Table 6 – Jackson Regional ITS Needs and Corresponding ITS Service Packages  
(continued)**

ITS Need	Corresponding ITS Service Packages
<b><i>Public Transportation Management</i></b>	
Need to improve coordination among transit agencies	APTS02 – Transit Fixed-Route Operations APTS03 – Demand Response Transit Operations APTS07 – Multi-modal Coordination APTS11 – Multimodal Connection Protection
Need to implement smart card system for both fixed-route and demand response vehicles that is compatible with other transit agencies	APTS04 – Transit Fare Collection Management APTS07 – Multi-modal Coordination
Need to continue to improve the dissemination of real-time transit information for riders bus stop DMS and the website	APTS08 – Transit Traveler Information ATIS02 – Interactive Traveler Information
<b><i>Archived Data Management</i></b>	
Need to archive data gathered through ITS to make it more accessible to regional stakeholders	AD1 – ITS Data Warehouse AD2 – ITS Virtual Data Warehouse

## 5.2 Architecture Interfaces

While it is important to identify the various systems and stakeholders that are part of a regional ITS, a primary purpose of the ITS architecture is to identify the connectivity between transportation systems in the Jackson Region. The system interconnect diagram shows the high-level relationships of the subsystems and terminators in the Jackson Region and the associated local projects and systems. The customized service packages represent services that can be deployed as an integrated capability, and the service package diagrams show the information flows between the subsystems and terminators that are most important to the operation of the service packages. How these systems interface with each other is an integral part of the overall ITS architecture.

### 5.2.1 Top Level Regional System Interconnect Diagram

A system interconnect diagram, or “sausage diagram”, shows the systems and primary interconnects in the Region. The National ITS Architecture interconnect diagram has been customized for the Jackson Region based on the system inventory and information gathered from the stakeholders. **Figure 5** summarizes the existing and planned ITS elements for the Jackson Region in the context of a physical interconnect. Subsystems and elements specific to the Region are called out in the boxes surrounding the main interconnect diagram, and these are color-coded to the subsystem with which they are associated.

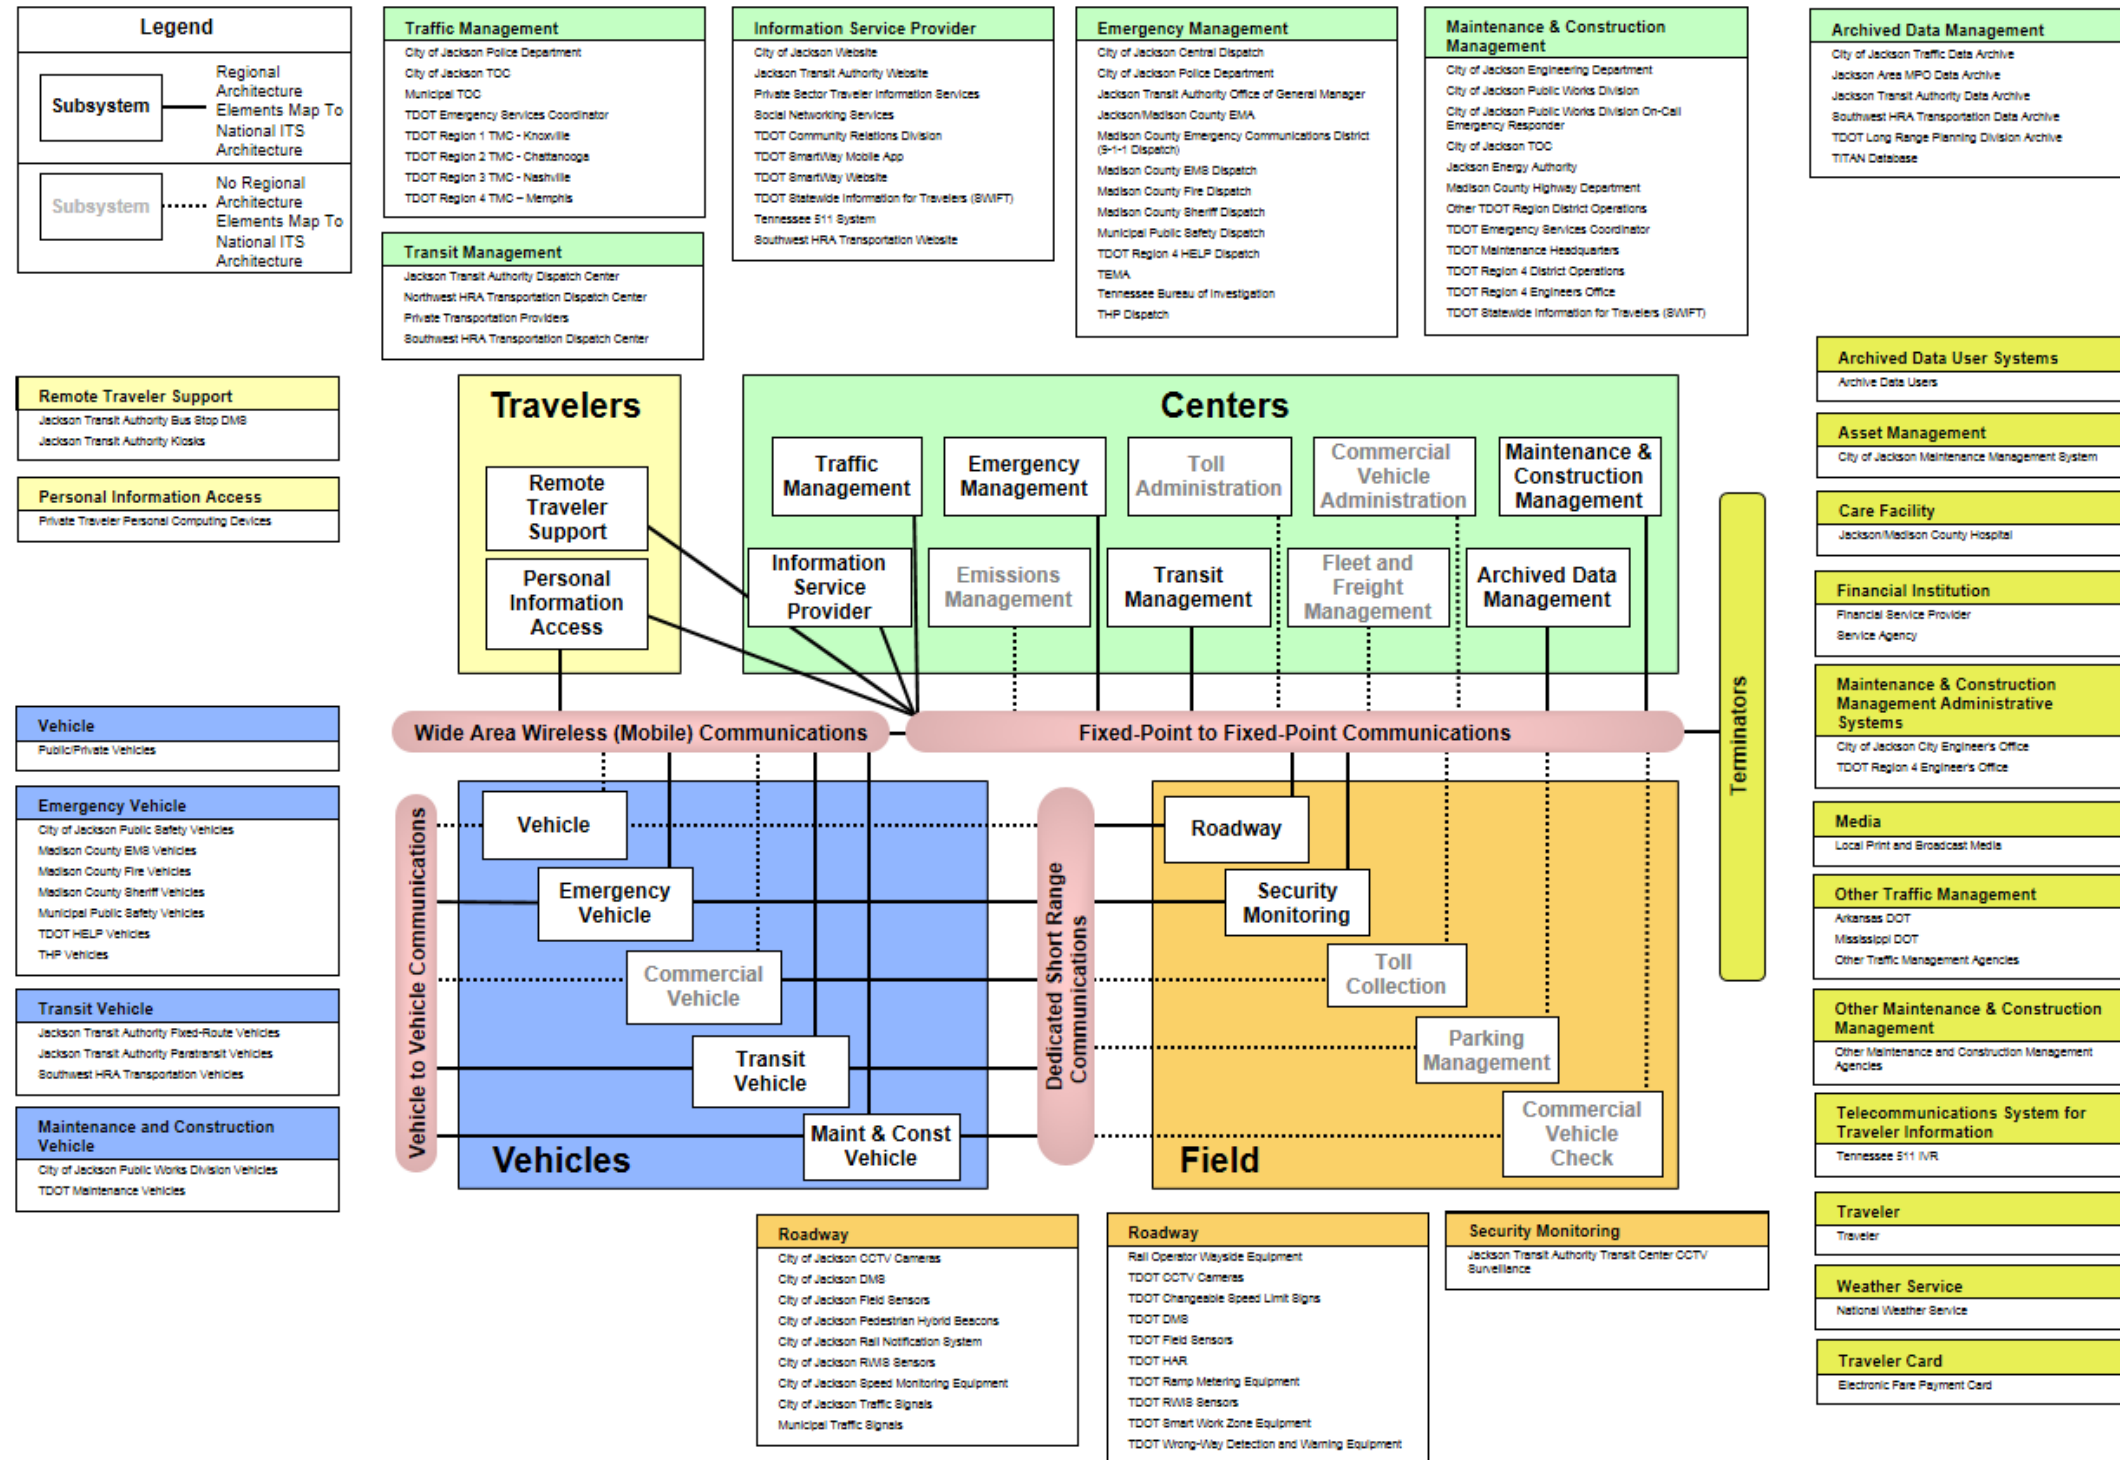

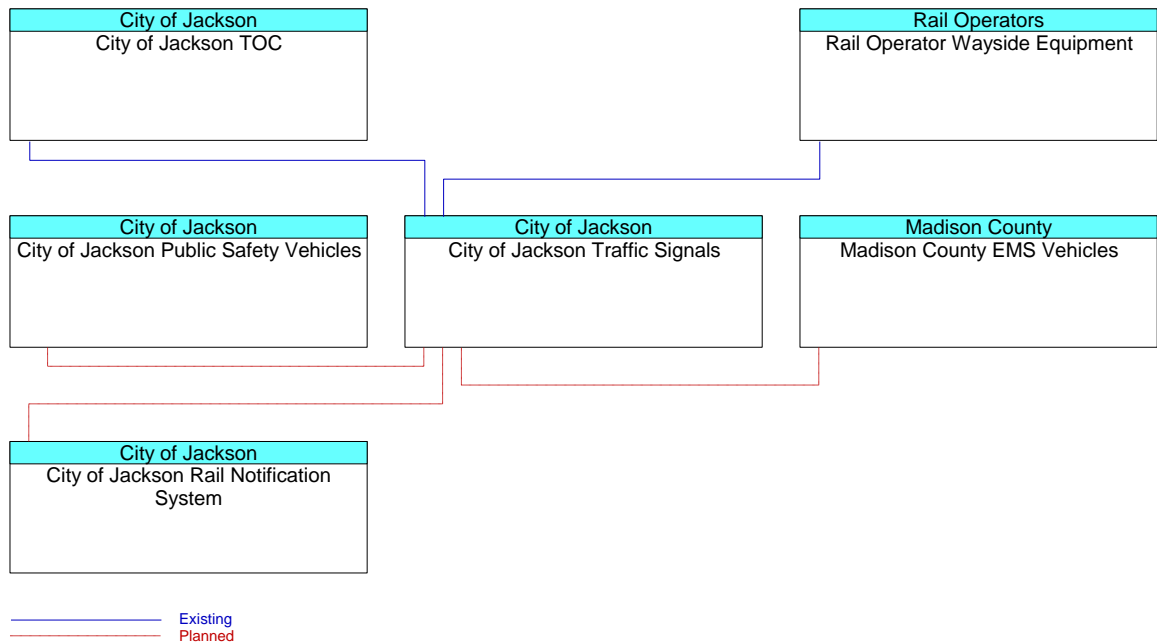

Figure 5 – Jackson Regional System Interconnect Diagram

### 5.2.2 Element Connections

A number of different elements are identified as part of the Jackson Regional ITS Architecture. These elements include transportation management centers, transit vehicles, dispatch systems, emergency management agencies, media outlets, and others—essentially, all of the existing and planned physical components that contribute to the regional ITS. Interfaces have been identified for each element in the Jackson Regional ITS Architecture and each element has been mapped to those other elements with which it must interface. The Turbo Architecture software can generate interconnect diagrams for each element in the Region that show which elements are connected to one another. **Figure 6** is an example of an interconnect diagram from the Turbo database output. This particular interconnect diagram is for the City of Jackson Traffic Signals, which shows existing connections in addition to connections that could be made in the future.

**Figure 6 – Example Interconnect Diagram: City of Jackson Traffic Signals**

### 5.2.3 Data Flows Between Elements

In the service package diagrams, flows between the subsystems and terminators define the specific information (data) that is exchanged between the elements and the direction of the exchange. The data flows could be requests for information, alerts and messages, status requests, broadcast advisories, event messages, confirmations, electronic credentials, and other key information requirements. Turbo Architecture can be used to output flow diagrams and can be filtered by service package for ease of interpretation; however, it is important to remember that custom data flows will not show up in diagrams that are filtered by service package. An example of a flow diagram for the Jackson Transit Authority that has been filtered for the APTS02 – Transit Fixed Route Operations service package is shown in **Figure 7**. The diagram shows existing and planned data flows between elements that support network surveillance.

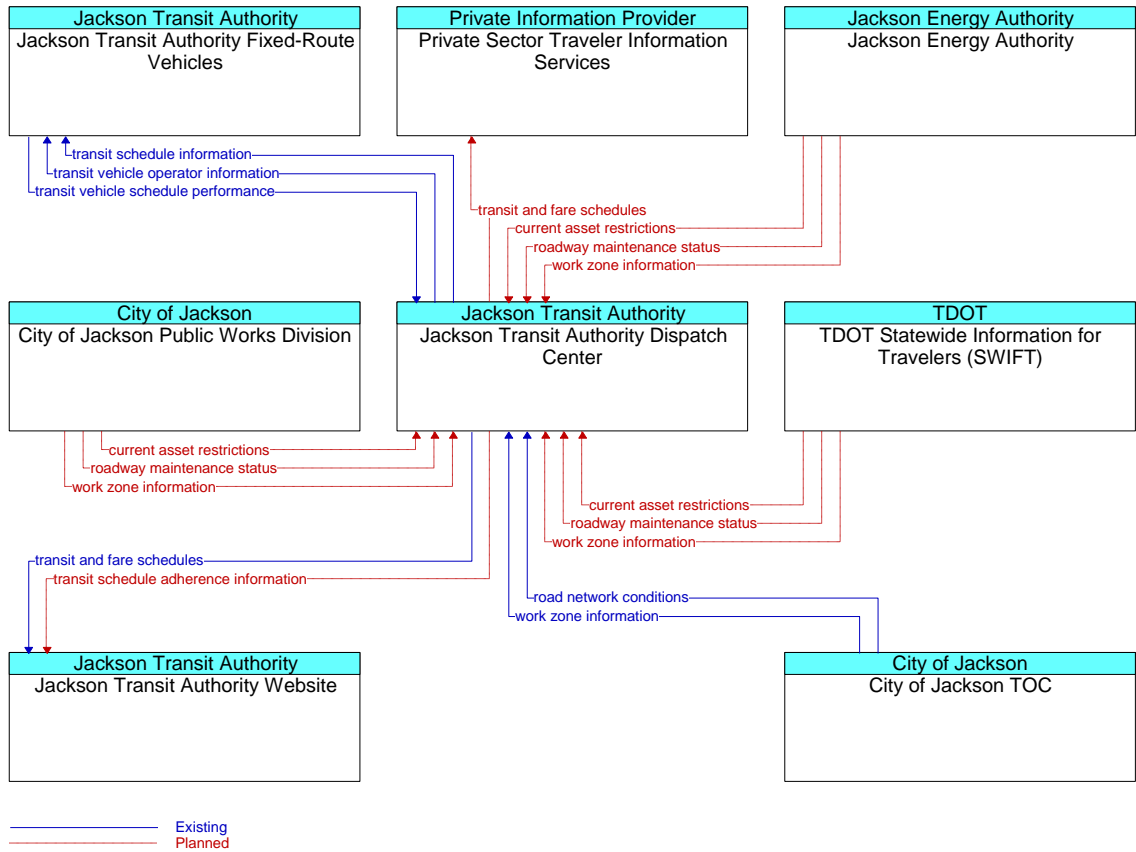

Figure 7 – Example Flow Diagram: APTS02 – Transit Fixed Route Operations

### 5.3 Functional Requirements

Functions are a description of what the system has to do. In the National ITS Architecture, functions are defined at several different levels, ranging from general subsystem descriptions through somewhat more specific equipment package descriptions to Process Specifications that include substantial detail. Guidance from the USDOT on developing a Regional ITS Architecture recommends that each Region determine the level of detail of the functional requirements for their Region. In the Jackson Region, it is recommended that the development of detailed functional requirements such as the “shall” statements included in process specifications for a system be developed at the project level. These detailed “shall” statements identify all functions that a project or system needs to perform.

For the Jackson Regional ITS Architecture, functional requirements have been identified at two levels. The customized service packages, discussed previously in Section 5.1.3, describe the services that ITS needs to provide in the Region and the architecture flows between the elements. These service packages and data flows describe what ITS in the Jackson Region has to do and the data that needs to be shared among elements.

At a more detailed level, functional requirements for the Jackson Region are described in terms of functions that each element in the architecture performs or will perform in the future. **Appendix C** contains a table that summarizes the functions by element excluding terminators. In addition to Appendix C, the requirements tab within the Turbo Architecture database also includes the functional requirements that have been identified for each of the elements in the Jackson Region.

These functional requirements include the “shall” statements that describe what the system does. The “shall” statements should be reviewed during future project level planning and design phases, and stakeholders should determine which of the “shall” statements are existing, which need to be implemented, and which are not needed based on their specific project needs. Section 7.2 contains additional information on the use of functional requirements when performing a systems engineering analysis on a project.

## 5.4 Standards

Standards are an important tool that will allow efficient implementation of the elements in the Jackson Regional ITS Architecture over time. Standards facilitate deployment of interoperable systems at local, regional, and national levels without impeding innovation as technology advances, vendors change, and as new approaches evolve. The USDOT’s ITS Joint Program Office is supporting Standards Development Organizations (SDOs) with an extensive, multi-year program of accelerated, consensus-based standards development to facilitate successful ITS deployment in the United States. **Table 7** identifies each of the ITS standards that could apply to the Jackson Regional ITS Architecture. These standards are based on the physical subsystem architecture flows previously identified in Section 5.2.3 and shown in the service package diagrams in **Appendix B**.

While **Table 7** does not match the standards to specific architecture flows, that information is available through the National ITS Architecture website and Turbo Architecture. Since the website is updated more frequently than the software and links directly to additional information about the applicable standard, the website is the preferred method for determining which standards apply to a particular architecture flow. To locate this information do the following:

- Go to the main page of the National Architecture website at <http://www.iteris.com/itsarch/>;
- In the menu bar on the left hand side select the tab for Physical Architecture;
- Select the Architecture Flows link embedded in the descriptive paragraph about the Physical Architecture;
- From the alphabetical list of flows that appears locate and select the desired flow;
- Architecture flows are often used between multiple subsystems so scrolling may be required to find the appropriate information associated with the particular use of the flow, in the descriptive information any applicable standards will be identified; and
- For additional information on the applicable standards the standard name is a link that when selected leads to a more detailed description of the standard.

**Table 7 – Jackson Regional ITS Standards**

SDO	Document ID	Title

### 5.5 Operational Concepts

An operational concept documents each stakeholder’s current and future roles and responsibilities across a range of transportation services, as grouped in the Operational Concepts section of Turbo Architecture, in the operation of the Regional ITS Architecture. The services covered are:

- **Traffic Signal Control** – The development of signal systems that react to changing traffic conditions and provide coordinated intersection timing over a corridor, an area, or multiple jurisdictions.
- **Freeway Traffic Metering Management** – The development of systems to monitor freeway traffic flow and roadway conditions, and provide strategies such as ramp metering or lane access control to improve the flow of traffic on the freeway. Includes systems to provide information to travelers on the roadway.
- **Incident Management** – The development of systems to provide rapid and effective response to incidents. Includes systems to detect and verify incidents, along with coordinated agency response to the incidents.
- **Emergency Management** – The development of systems to provide emergency call taking, public safety dispatch, and emergency operations center operations.
- **Maintenance and Construction Management** – The development of systems to manage the maintenance of roadways in the Region, including winter snow and ice clearance. Includes the managing of construction operations and coordinating construction activities.
- **Transit Management** – The development of systems to more efficiently manage fleets of transit vehicles or transit rail. Includes systems to provide transit traveler information both pre-trip and during the trip.
- **Traveler Information** – The development of systems to provide static and real-time transportation information to travelers.
- **Archived Data Management** – The development of systems to collect transportation data for use in non-operational purposes (e.g., planning and research).

**Table 8** identifies the roles and responsibilities of key stakeholders for a range of transportation services.

**Table 8 – Jackson Region Stakeholder Roles and Responsibilities**

<b>Transportation Service</b>	<b>Stakeholder</b>	<b>Roles/Responsibilities</b>
Archived Data Systems	City of Jackson	Collect and maintain data from regional traffic, transit, and emergency management agencies.
	Jackson Transit Authority	Collect and maintain transit archive data.
	Northwest Tennessee Human Resource Agency	Collect and maintain transit archive data.
	Southeast Tennessee Human Resource Agency	Collect and maintain transit archive data.
	TDOT	Collect and maintain traffic archive data.
	THP	Collect and maintain crash record information from regional emergency management agencies.
Emergency Management	City of Jackson	911 Dispatch - Participate in regional emergency planning to support large-scale incidents and disasters.
		911 Dispatch - Responsible for the dispatch of emergency vehicles to incidents and tracking of their location and status.
		911 Dispatch - Responsible for the routing of emergency vehicles to facilitate the safest/quickest arrival at an incident.
	Jackson/Madison County Emergency Management Agency	EMA - Lead evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
		EMA - Lead regional efforts for emergency planning to support large-scale incidents and disasters.
		EMA - Operates the Emergency Operations Center (EOC) for Madison County including the City of Jackson in the event of a disaster or other large-scale emergency situation.
		EMA - Participate in evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
		EMA - Responsible for tactical decision support, resource coordination, and communications integration among emergency management agencies in the County.
	Madison County	911 Dispatch - Participate in regional emergency planning to support large-scale incidents and disasters.
		911 Dispatch - Responsible for emergency call-taking for Madison County, including the City of Jackson, as the 911 Public Safety Answering Point (PSAP).
		911 Dispatch - Responsible for the dispatch of emergency vehicles to incidents and tracking of their location and status.

**Table 8 – Jackson Region Stakeholder Roles and Responsibilities (continued)**

Transportation Service	Stakeholder	Roles/Responsibilities
Emergency Management (continued)	Madison County (continued)	911 Dispatch - Responsible for the routing of emergency vehicles to facilitate the safest/quickest arrival at an incident.
		EMA - Participate in evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
	Municipal Government	911 Dispatch - Participate in regional emergency planning to support large-scale incidents and disasters.
		911 Dispatch - Responsible for the dispatch of emergency vehicles to incidents and tracking of their location and status.
		911 Dispatch - Responsible for the routing of emergency vehicles to facilitate the safest/quickest arrival at an incident.
		EMA - Participate in evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
	TEMA	Lead evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
		Lead statewide efforts for emergency planning to support large-scale incidents and disasters.
		Operates the Emergency Operations Center (EOC) for the State of Tennessee in the event of a disaster or other large-scale emergency situation.
		Responsible for tactical decision support, resource coordination, and communications integration among emergency management agencies in the State.
	Tennessee Bureau of Investigation	Responsible for the initiation of AMBER alerts.
	THP	Participate in evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
		Participate in regional emergency planning to support large-scale incidents and disasters.
		Responsible for the dispatch of emergency vehicles to incidents and tracking of their location and status.
Responsible for the routing of emergency vehicles to facilitate the safest/quickest arrival at an incident.		

**Table 8 – Jackson Region Stakeholder Roles and Responsibilities (continued)**

Transportation Service	Stakeholder	Roles/Responsibilities
Freeway Traffic Metering Management	TDOT	Operate dynamic message signs (DMS) and highway advisory radio (HAR) for the distribution of traffic information and roadway conditions to travelers on the roadway.
		Operate dynamic roadway warning equipment for wrong-way driver detection and warning.
		Operate motorist assistance patrol (HELP) to facilitate special event traffic control and incident management.
		Operate network surveillance equipment including CCTV cameras and vehicle detection on state roadways.
		Operate ramp metering equipment to manage vehicles entering a controlled access facility
		Operate variable speed limit signs based on weather and traffic conditions.
Incident Management	City of Jackson	911 Dispatch - Responsible for emergency call-taking for Madison County, including the City of Jackson, as the 911 Public Safety Answering Point (PSAP).
		Coordinate incident response with other public safety agencies, the City of Jackson TOC, and the TDOT Region 4 TMC in Memphis for incidents on state facilities.
		Coordinate maintenance resources for incident response with the City of Jackson Public Works Department.
		Dispatch public safety vehicles for incidents.
		Operate dynamic message signs for the distribution of incident information to travelers on the roadway.
		Remotely control traffic and video sensors to support incident detection and verification.
		Responsible for coordination with other traffic operations centers and emergency management agencies for coordinated incident management.
		Responsible for the dissemination of traffic related data to other centers and the media.
	Madison County	Coordinate incident response with other public safety agencies, the City of Jackson TOC, and the TDOT Region 4 TMC in Memphis for incidents on state facilities.
		Dispatch public safety vehicles for incidents.
	Municipal Government	Coordinate incident response with other public safety agencies as well as the TDOT Region 4 TMC in Memphis for incidents on state facilities.
		Dispatch public safety vehicles for incidents.
	TDOT	Operate dynamic message signs and highway advisory radio for the distribution of incident information to travelers on the roadway.
		Remotely control traffic and video sensors to support incident detection and verification.
		Responsible for coordination with other traffic operations centers and emergency management agencies for coordinated incident management.

**Table 8 – Jackson Region Stakeholder Roles and Responsibilities (continued)**

Transportation Service	Stakeholder	Roles/Responsibilities
Incident Management (continued)	TDOT (continued)	Responsible for the development, coordination and execution of special traffic management strategies during an evacuation.
		Responsible for the dissemination of traffic related data to other centers and the media.
	THP	Coordinate incident response with other public safety and traffic management agencies as well as the TDOT Region 4 TMC in Memphis for incidents on state facilities.
		Dispatch public safety vehicles for incidents.
Maintenance and Construction Management	City of Jackson	Disseminates work zone activity schedules and current asset restrictions to other agencies.
		Monitors environmental sensors and distributes information about road weather conditions.
		Responsible for the tracking and dispatch of maintenance vehicles.
		Supports coordinated response to incidents.
		Supports work zone activities including the dissemination of work zone information through portable DMS and sharing of information with other groups.
	Madison County	Disseminates work zone activity schedules and current asset restrictions to other agencies.
		Supports coordinated response to incidents.
		Supports work zone activities including the dissemination of work zone information through portable DMS and sharing of information with other groups.
	TDOT	Disseminates work activity schedules and current asset restrictions to other agencies.
		Monitors environmental sensors and distributes information about road weather conditions.
		Operates work zone traffic control equipment including portable surveillance equipment, dynamic message signs, and highway advisory radio transmitters.
		Responsible for the tracking and dispatch of maintenance vehicles.
Supports coordinated response to incidents.		
Supports work zone activities including the dissemination of work zone information through portable DMS, highway advisory radio, and sharing of information with other groups.		
Traffic Signal Control	City of Jackson	Operate and maintain traffic signal systems within the City.
		Operate DMS for the distribution of traffic information and roadway conditions to travelers on the roadway.
		Operate network surveillance equipment including CCTV cameras and vehicle detection on roadways within the City to facilitate traffic signal operations.
		Provide traffic signal preemption for emergency vehicles.

**Table 8 – Jackson Region Stakeholder Roles and Responsibilities (continued)**

Transportation Service	Stakeholder	Roles/Responsibilities
Traffic Signal Control (continued)	City of Jackson (continued)	Remotely operate traffic signal controllers to implement traffic management strategies at signalized intersections based on traffic conditions, incidents, and emergency vehicle preemptions.
	Municipal Government	Operate and maintain traffic signal systems within the municipality.
		Operate network surveillance equipment including CCTV cameras and vehicle detection on roadways within the municipality to facilitate traffic signal operations.  Remotely operate traffic signal controllers to implement traffic management strategies at signalized intersection based on traffic conditions, incidents, and emergency vehicle preemptions.
Transit Management	Jackson Transit Authority	Coordinate transit service with other regional transit providers.
		EMA - Participate in evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
		Operate on-board systems to provide next stop annunciation.
		Operates demand response and fixed-route transit services from a central dispatch facility responsible for tracking their location and status.
		Provide schedule and fare information on transit kiosks.
		Provide transit passenger electronic fare payment on fixed-route and demand response transit vehicles.
		Provide transit security on transit vehicles and at transit terminals through silent alarms and surveillance systems.
	Provide transit traveler information to the agency website, local private sector traveler information services, and the Tennessee 511 system.	
	Northwest Tennessee Human Resource Agency	Coordinate transit service with other regional transit providers.
		Operates demand response transit services from a central dispatch facility responsible for tracking their location and status.
		Provide transit traveler information to the agency website, local private sector traveler information services, and the Tennessee 511 system.
	Southwest Tennessee Human Resource Agency	Coordinate transit service with other regional transit providers.
		EMA - Participate in evacuation planning and coordination to manage evacuation and reentry in the vicinity of a disaster or other emergency situation.
Operates demand response transit services from a central dispatch facility responsible for tracking their location and status.		
Provide transit passenger electronic fare payment on demand response transit vehicles.		

**Table 8 – Jackson Region Stakeholder Roles and Responsibilities (continued)**

Transportation Service	Stakeholder	Roles/Responsibilities
Transit Management (continued)	Southwest Tennessee Human Resource Agency (continued)	Provide transit security on transit vehicles through silent alarms and surveillance systems.
		Provide transit traveler information to the agency website, local private sector traveler information services, and the Tennessee 511 system.
Traveler Information	City of Jackson	Responsible for the collection and distribution of emergency information to the traveling public, including evacuation information and wide-area alerts.
		Responsible for the collection and distribution of traveler information including incident information and maintenance and construction closure information.
	Jackson Transit Authority	Provide transit traveler information to the agency website, local private sector traveler information services, and the Tennessee 511 system.
	TDOT	Collection, processing, storage, and broadcast dissemination of traffic, transit, maintenance and construction, event and weather information to travelers via the SmartWay Website and Mobile Phone App and the Tennessee 511 system.
		Operate DMS and HAR to distribute traffic information and roadway conditions to travelers on the roadway.
		Provide transportation network condition data to private sector information service providers.

## 5.6 Potential Agreements

The Regional ITS Architecture for the Jackson Region has identified many agency interfaces, information exchanges, and integration strategies needed to provide the ITS services and systems identified by the stakeholders in the Region. Interfaces and data flows among public and private entities in the Region will require agreements among agencies that establish parameters for sharing agency information to support traffic management, incident management, provide traveler information, and perform other functions identified in the Regional ITS Architecture.

With the implementation of ITS technologies, integrating systems from one or more agencies, and the anticipated level of information exchange identified in the Regional ITS Architecture; it is likely that formal agreements between agencies will be needed in the future. These agreements, while perhaps not requiring a financial commitment from agencies in the Region, should outline specific roles, responsibilities, data exchanges, levels of authority, and other facets of regional operations. Some agreements will also outline specific funding responsibilities, where appropriate and applicable.

Agreements should avoid being specific with regards to technology when possible. Technology is likely to change, and changes to technology could require an update of the agreement if the agreement was not technology neutral. The focus of the agreement should be on the responsibilities of the agencies and the high level information that needs to be exchanged. Depending on the type of agreement being used, agencies need to be prepared for the process to complete an agreement to take several months to years. Agencies must first reach consensus on the content of an agreement and then proceed through the approval process. The approval process for formal agreements varies by agency. The process often is lengthy; agencies should plan ahead to ensure that the agreement does not delay the project.

When implementing an agreement for ITS, it is recommended that as a first step, any existing agreements to determine if amendments or modifications to the existing agreement can include the additional requirements of deploying a system. If there are no existing agreements to modify or use for ITS implementation, then a new agreement will need to be developed. The formality and type of agreement used is a key consideration. If the arrangement will be in effect for an extended duration or involve any sort of long-term maintenance, then written agreements should be used. Often during long-term operations, staff may change and a verbal agreement between agency representatives is not communicated to new staff.

Common agreement types and potential applications include:

- *Handshake Agreement:* Handshake agreements are often used in the early stage of a project. This type of informal agreement depends very much on relationships between agencies and may not be appropriate for long-term operations where staff is likely to change.
- *Memorandum of Understanding (MOU):* A MOU demonstrates general consensus but is not typically very detailed. MOUs often identify high-level goals and partnerships
- *Interagency and Intergovernmental Agreements:* These agreements between public agencies can be used for operation, maintenance, or funding projects and systems. They can include documentation on the responsibility of each agency, functions each will provide, and liability.
- *Funding Agreements:* Funding agreements document the funding arrangements for ITS projects. At a minimum, funding agreements include a detailed scope, services to be performed, and a detailed project budget. Agency funding expectations or funding sources are also typically identified.
- *Master Agreements:* Master agreements include standard contract language for an agency and serve as the main agreement between two entities that guides all business transactions. Use of

a master agreement can allow an agency to do business with another agency or private entity without having to go through the often lengthy development of a formal agreement each time.

**Table 9** provides a list of existing and potential agreements for the Jackson Region based on the interfaces identified in the Regional ITS Architecture. It is important to note that as ITS services and systems are implemented in the Region, part of the planning and review process for those projects should include a review of potential agreements that would be needed for implementation or operations.

In **Appendix E**, copies of the existing agreements that were available have been included. These agreements include:

- Memorandum of Understanding among TDOT, TDOSHS, and local governments for the quick clearance of incidents along the State Highway System;
- Agreement developed by TDOT for live CCTV video access and information sharing for governmental agency users; and
- Agreement developed by TDOT for live CCTV video access for private entity users.

**Table 9 – Jackson Region Potential Agreements**

Status	Agreement and Agencies	Agreement Description
Existing	<b>Data Sharing and Usage (Public-Private)</b> –TDOT and Media	Agreement to allow private sector media and information service providers to access and broadcast public sector transportation agency CCTV camera video feeds, real time traffic speed and volume data, and incident data. Agreements should specify the control priority to allow traffic agencies first priority to control cameras during incidents or other events. The ability of the traffic agency to deny access to video and data feeds if a situation warrants such action is also part of the agreement.
Existing	<b>Data Sharing and Usage (Public-Public)</b> –TDOT and Local Responder Entity Users	Agreement to define the parameters, guidelines, and policies for inter-agency ITS data sharing between public sector agencies including CCTV camera feeds. Allows local governmental agencies the ability to view live TDOT SmartWay cameras through TDOT's new SmartView Program. Local governments are required to share traffic related information with TDOT that may negatively impact interstates or state routes in addition to attending incident management training.
Existing	<b>Open Roads Policy (Public-Public)</b> – TDOT, THP (TDOSHS), and Municipalities/Counties	Memorandum of Understanding among TDOT, THP (TDOSHS), and local governments that establishes guidelines to accelerate the removal of vehicles or debris on the State Highway System to restore the flow of traffic following an incident.
Future	<b>Maintenance Agreements (Public-Public)</b> – City of Jackson, and TDOT	Agreement that would allow multiple public agencies to pool their funding together to hire a single maintenance contractor to maintain ITS devices throughout the Region.
Future	<b>Incident Data Sharing and Usage (Public-Public)</b> – (TDOT, City of Jackson, THP, Madison County 911 PSAP, Madison County Public Safety Agencies)	Agreement would define the parameters, guidelines, and policies for inter-agency sharing of incident data between transportation and emergency management agencies in the Region. Incident information could be sent directly to computer-aided dispatch systems and include information on lane closures, travel delays, and weather.
Future	<b>Joint Operations Agreement (Public-Public)</b> – City of Jackson, Madison County, TDOT	Agreement to operate the system from a shared control facility that could include traffic, transit, and emergency management. Examples could include a regional TMC or a combined TMC and EOC. Agreement will need to identify such issues as sharing of data and control of devices, cost sharing of the facilities, and standard operating procedures. Shared field equipment, such as a CCTV camera that can be accessed by multiple agencies could also be covered under this type of agreement.
Future	<b>ITS and Traffic Signal Timing Data Sharing and Usage (Public-Public)</b> – City of Jackson, Madison County, Municipal Government	Agreement would define the parameters, guidelines, and policies for inter-agency ITS and traffic signal timing sharing between cities, counties, and any other agencies that might maintain their traffic signal system.
Future	<b>Data Sharing and Usage (Public-Private)</b> – City of Jackson, Media	Agreement would allow private sector media and information service providers to access and broadcast public transportation agency CCTV camera video feeds, real time traffic speed and volume data, and incident data. Agreements should specify the control priority to allow traffic agencies first priority to control cameras during incidents or other events. The ability of the traffic agency to deny access to video and data feeds if a situation warrants such action should also be part of the agreement.

## 5.7 Phases of Implementation

The Jackson Regional ITS Architecture will be implemented over time through a series of projects. Key foundation systems will need to be implemented in order to support other systems identified in the Regional ITS Architecture. The deployment of all of the systems required to achieve the final Regional ITS Architecture build out will occur over many years.

A sequence of projects and their respective timeframes were identified in the Jackson Regional ITS Deployment Plan presented in Section 6. These projects were sequenced over a time period that coincides with the 2040 Long Range Transportation Plan, with projects identified for deployment in the short-term (0 to 5 years), mid-term (5 to 10 years), and long-term (beyond 10 years.)

Some of the key service packages that will provide the functions for the foundation systems in the Jackson Region are listed below. Projects associated with these and other service packages identified for the Region were included in the Jackson Regional ITS Deployment Plan.

- ATMS01 – Network Surveillance;
- ATMS02 – Traffic Probe Surveillance;
- ATMS03 – Traffic Signal Control;
- ATMS06 – Traffic Information Dissemination;
- ATMS07 – Regional Traffic Management;
- ATMS08 – Traffic Incident Management System;
- MC01 – Maintenance and Construction Vehicle Equipment Tacking;
- MC03 – Road Weather Data Collection;
- MC04 – Weather Information Processing and Distribution;
- APTS02 – Transit Fixed-Route Operations;
- APTS03 – Demand Response Transit Operations;
- APTS04 – Transit Fare Collection Management;
- APTS07 – Multi-modal Coordination;
- APTS08 – Transit Traveler Information;
- ATIS02 – Interactive Traveler Information; and
- AD1 – ITS Data Mart.

## 6. REGIONAL ITS DEPLOYMENT PLAN

The Regional ITS Deployment Plan serves as a tool for the Jackson Region to identify specific projects that should be deployed in order to achieve the desired functionality identified in the Regional ITS Architecture. The Regional ITS Deployment Plan builds on the Regional ITS Architecture by outlining specific ITS project recommendations and strategies for the Region and identifying deployment timeframes so that the recommended projects and strategies can be implemented over time.

The Regional ITS Deployment Plan also shows the correlation between each project and the Regional ITS Architecture by identifying the ITS service packages that correspond to each project. If projects were identified that did not correspond to an ITS service package, the ITS service packages in the Regional ITS Architecture were revised while the Regional ITS Architecture was still in draft format; therefore, the resulting ITS deployment projects are supported by the Regional ITS Architecture.

The Jackson Regional ITS Deployment Plan provides stakeholders with a list of regionally significant ITS projects that are consistent with the Regional ITS Architecture and assists with addressing transportation needs in the Region. It is important to note that the Regional ITS Deployment Plan is not fiscally constrained. The projects in the plan represent those projects that stakeholders would like to implement; however, funding will still be needed in order for these projects to actually be implemented.

### 6.1 Project Development and Selection

An overview of the process used to develop the Regional ITS Deployment Plan is provided in **Figure 8**. This figure demonstrates that a variety of inputs were used to gather information and develop a set of ITS projects for selection by stakeholders, including a review of the regional needs, ITS service package priorities, and regional and local plans.

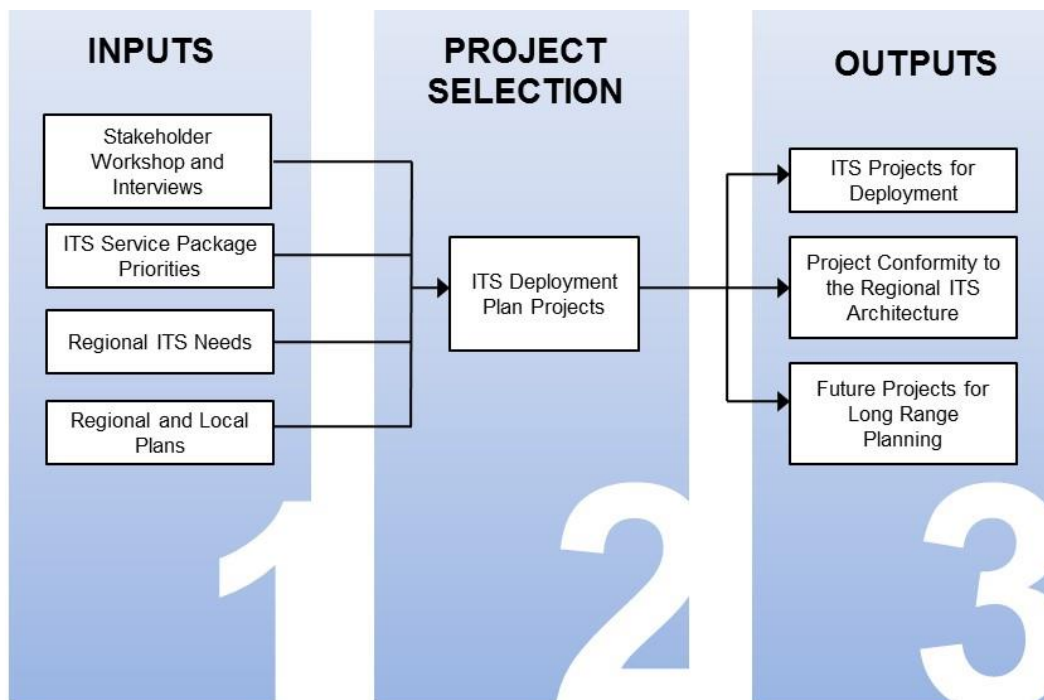

Figure 8 – Project Development and Selection Process

Stakeholder input in Step 1 was gathered through a stakeholder workshop where the regional ITS needs, ITS service package priorities, and planned ITS projects were discussed. A series of interviews were also conducted to discuss this same information in more detail with key agencies in the Region. A review of regional and local plans was conducted as well to identify potential project ideas.

The inputs in Step 1 led to the project selection in Step 2. Projects selected in the ITS Deployment Plan were reviewed by stakeholders when the Regional ITS Architecture document was in draft format.

The outputs of the plan, shown in Step 3, will provide stakeholders and the Jackson Area MPO with a list of priority ITS projects for the Jackson Region. Each of the projects recommended in the plan has been checked against the Jackson Regional ITS Architecture to ensure they are in conformance. This should assist agencies deploying these projects in the future with meeting FHWA and FTA requirements for ITS architecture conformity. The projects in the plan could also feed into the long-range planning process and provide agencies with a list of priority ITS projects for consideration during future calls for projects from the MPO.

## 6.2 ITS Project Recommendations

In order to achieve the ITS deployment levels outlined in their Regional ITS Architecture, a region must deploy carefully developed projects that provide the functionality and interoperability identified in their Regional ITS Architecture. A key step toward achieving the Jackson Region's ITS vision, as established in the Regional ITS Architecture, is the development of an ITS Deployment Plan that identifies specific projects, timeframes, and responsible agencies.

Input from all stakeholders is required for stakeholders to have ownership of the ITS Deployment Plan and to ensure that the plan has realistically identified projects and timeframes for deployment. Cost is another important factor—cost can vary a great deal for many ITS elements, depending on the level of deployment, maturity of the technology, type of communications, etc. For example, freeway network surveillance could be adequately achieved for one region by the deployment of still frame CCTV cameras only at freeway interchanges. In another region, full motion cameras may be deployed at one-mile intervals to provide complete coverage of the freeway. The infrastructure and telecommunications costs for these two projects would vary a great deal, yet either one could be suitable for a particular region.

Regional projects are identified in **Table 10** through **Table 13**. The tables are divided by the primary responsible agency as follows:

- **Table 10** – State ITS Deployment Plan Projects
- **Table 11** – Local ITS Deployment Plan Projects
- **Table 12** – Transit ITS Deployment Plan Projects
- **Table 13** – Other ITS Deployment Plan Projects

The projects identified in the tables represent priority projects for each agency that are needed in order to implement the ITS services that were identified as part of the Regional ITS Architecture development. Projects that have been funded using federal transportation funds will be included in the Regional Transportation Improvement Plan (TIP). Projects that are funded with non-federal funding may also be included in the TIP, but are not required to be included. Many of the projects identified in the plan do not yet have funding. Identification of a funding source will likely be the most significant challenge in getting the projects implemented.

For each project, the following categories are discussed:

- **Project** – Identifies the project name including the agency responsible for implementation where applicable.
- **Description** – Provides a description of the project including notes on time-frames for deployment and costs if applicable. The level of detail in the project descriptions varies depending on the implementing agency and how much detail they wanted to include regarding a project. In some cases, projects had not been discussed beyond a very high conceptual level and there was limited or no information available on cost and scale of the potential project.
- **Deployment Timeframe and Responsible Agency** – Provides a recommended timeframe for deployment for each project. Timeframes have been identified as short-term (deployment recommended in 0-5 years), mid-term (deployment recommended in 5-10 years), and long-term (deployment recommended beyond 10 years). Recommendations for deployment timeframes were based on input from each agency and considered the project priority, possibility of funding, and dependency on other project deployments.
- **Funding Status** – Indicates whether funding has been identified or is still needed for the project.
- **Applicable ITS Service Packages** – Identifies the ITS service packages from the Regional ITS Architecture that each project will assist in implementing. Knowing which ITS service packages each project identifies is an important part of an ITS architecture conformance review.

**Table 10 – State ITS Deployment Plan Projects**

Project	Project Description	Deployment Timeframe and Responsible Agency <sup>1</sup>	Funding Status	Applicable ITS Service Packages
<p>TDOT SmartView Access for Local Governments</p>	<p>SmartView is a software program that is currently used internally by TDOT to view real-time CCTV camera video in addition to other functions. In the future, this program will allow local government agencies the ability to view TDOT CCTV cameras feeds and offer additional viewing capabilities that are not available to the general public on the SmartWay website. TDOT is currently working with local agencies to obtain signed MOUs regarding access to SmartView and data sharing. Estimated project cost for the SmartView video distribution software and a five year support contract is \$3,300,000. The project is funded through State funds.</p>	<p>Short-Term: TDOT and Counties/ Municipalities</p>	<p>Funding Identified: Yes</p>	<p>ATMS01 – Network Surveillance ATMS07 – Regional Traffic Management</p>
<p>TDOT SmartWay Installation on I-40</p>	<p>Install SmartWay ITS field components on I-40 as part of the five year widening project planned for I-40 in Madison County. ITS field components may include CCTV camera, DMS, HAR, and communications infrastructure. HELP service patrol vehicles could also be deployed as part of this project.</p>	<p>Short-Term to Mid-Term: TDOT</p>	<p>Funding Identified: No</p>	<p>ATMS01 – Network Surveillance ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management System</p>
<p>TDOT Jackson TMC Workstation Expansion</p>	<p>Expand the existing workstation within the TDOT Region 4 Office in coordination with the installation of SmartWay ITS field components along I-40. Expansion will include three to four workstations as well as monitors. The expansion will provide the TDOT Region 4 staff in Jackson with the ability to monitor and control SmartWay ITS field components on I-40 during normal working hours, with the TDOT Region 4 TMC in Memphis providing after hours support.</p>	<p>Short-Term to Mid-Term: TDOT</p>	<p>Funding Identified: No</p>	<p>ATMS01 – Network Surveillance ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management System</p>

**Table 10 – State ITS Deployment Plan Projects (continued)**

Project	Project Description	Deployment Timeframe and Responsible Agency <sup>1</sup>	Funding Status	Applicable ITS Service Packages
TDOT Jackson TMC Staffing	Provide staffing necessary for the TDOT Jackson TMC to monitor and operate future SmartWay ITS deployments on I-40. The TDOT Jackson TMC will provide operational capabilities during normal working hours, with the TDOT Region 4 TMC in Memphis providing after hours support. Additional staffing is also needed for the TDOT Region 4 TMC in Memphis to operate on a 24 hour basis.	Short-Term to Mid-Term: TDOT	Funding Identified: No	ATMS01 – Network Surveillance ATMS06 – Traffic Information Dissemination ATMS07 – Regional Traffic Management ATMS08 – Traffic Incident Management System
TDOT HELP Service Patrol Expansion on I-40	If TDOT does deploy SmartWay on I-40 in Madison County, the HELP service patrol may also be implemented on I-40.	Mid-Term: TDOT	Funding Identified: No	EM04 – Roadway Service Patrols

<sup>1</sup>Deployment timeframes include short-term (0-5 years), mid-term (5-10 years), and long-term (10+ years).

**Table 11 – Local ITS Deployment Plan Projects**

Project	Project Description	Deployment Timeframe and Responsible Agency <sup>1</sup>	Funding Status	Applicable ITS Service Packages
City of Jackson TOC Phase 1	Establish a Traffic Operations Center (TOC) for the City of Jackson. Phase 1 of the TOC will support the management of the closed loop traffic signal system and control of CCTV cameras. Estimated total project costs of both the establishment of a TOC and signal system upgrades is \$350,000. These projects are funded through local funds.	Short-Term: City of Jackson	Funding Identified: Yes	ATMS01 – Network Surveillance ATMS03 – Traffic Signal Control ATMS07 – Regional Traffic Control
City of Jackson Signal System Upgrades Phase 1	Upgrade and expand the City of Jackson traffic signal system to include a closed loop signal system and communications system on Highland Avenue (US-45). Estimated total project costs of both the establishment of a TOC and signal system upgrades is \$350,000. These projects are funded through local funds.	Short-Term: City of Jackson	Funding Identified: Yes	ATMS01 – Network Surveillance ATMS03 – Traffic Signal Control
City of Jackson CCTV Camera Deployment	Deploy CCTV cameras on Highland Avenue (US-45) and other locations with communications in place to support cameras.	Short-Term: City of Jackson	Funding Identified: No	ATMS01 – Network Surveillance
City of Jackson Emergency Vehicle Signal Preemption	Implement emergency vehicle signal preemption at traffic signals in the City of Jackson to improve incident response times and emergency responder safety.	Short-Term: City of Jackson Fire Department	Funding Identified: Not	EM02 – Emergency Routing
City of Jackson TOC Coordination with TDOT SmartWay Center	Establish a communications connection between the City of Jackson TOC and Memphis SmartWay Center for the coordination of traffic information.	Mid-Term: City of Jackson and TDOT	Funding Identified: No	ATMS07 – Regional Traffic Control ATMS08 – Traffic Incident Management MC04 – Weather Information Processing and Distribution MC10 – Maintenance and Construction Activity Coordination

**Table 11 – Local ITS Deployment Plan Projects (continued)**

Project	Project Description	Deployment Timeframe and Responsible Agency <sup>1</sup>	Funding Status	Applicable ITS Service Packages
City of Jackson Signal System Upgrades Phase 2	Continue upgrade of the City of Jackson traffic signal system to include a closed loop signal system and communications system.	Mid-Term: City of Jackson	Funding Identified: No	ATMS01 – Network Surveillance ATMS03 – Traffic Signal Control
City of Jackson Arterial DMS	Deploy arterial dynamic message signs (DMS) to provide traveler information on arterials for real-time traveler information, incident management and special event management capabilities. The arterial DMS could also be used to provide information on freeway conditions prior to travelers entering freeways.	Long-Term: City of Jackson	Funding Identified: No	ATMS06 – Traffic Information Dissemination

<sup>1</sup>Deployment timeframes include short-term (0-5 years), mid-term (5-10 years), and long-term (10+ years).

**Table 12 – Transit ITS Deployment Plan Projects**

Project	Project Description	Deployment Timeframe and Responsible Agency <sup>1</sup>	Funding Status	Applicable ITS Service Packages
Jackson Transit Authority AVL	Install AVL for real-time vehicle location of the Jackson Transit Authority fleet. FTA funding of \$100,000 is currently identified for this project.	Short-Term: Jackson Transit Authority	Funding Identified: Yes	APTS01 – Transit Vehicle Tracking APTS08 – Transit Traveler Information
Jackson Transit Authority SmartBus	Retrofit existing Jackson Transit Authority buses with stop annunciation technology to improve traveler information and accessibility by the sight impaired. Stop annunciation will use GPS to determine what the next stop is and makes an announcement to travelers. This information is also frequently displayed on a dynamic sign within the vehicle so that hearing impaired patrons can also benefit from the information.	Short-Term: Jackson Transit Authority	Funding Identified: No	APTS08 – Transit Traveler Information
Jackson Transit Authority Transit Vehicle Security Cameras	Implement video surveillance on Jackson Transit Authority vehicles to improve patron and driver safety. Cameras would be for on-board recording only. FTA funding of \$125,000 has been identified, a portion of which will be used to fund security camera implementation.	Short-Term: Jackson Transit Authority	Funding Identified: Partial	APTS05 – Transit Security
Jackson Transit Authority Real Time Bus Arrival Information	Install message boards to provide real-time vehicle location information at permanent covered stops.	Short-Term: Jackson Transit Authority	Funding Identified: No	APTS1 – Transit Vehicle Tracking APTS08 – Transit Traveler Information
Jackson Transit Authority Bus Stop Security Monitoring	Implement video surveillance at permanent covered stops to improve patron and driver safety. Cameras would be monitored by the City of Jackson Police Department.	Short-Term: Jackson Transit Authority	Funding Identified: No	APTS05 – Transit Security
Jackson Transit Authority Electronic Fare Collection System	Implement electronic fare collection system on Jackson Transit Authority vehicles.	Mid-Term: Jackson Transit Authority	Funding Identified: No	APTS04 – Transit Fare Collection Management

<sup>1</sup>Deployment timeframes include short-term (0-5 years), mid-term (5-10 years), and long-term (10+ years).

**Table 13 – Other ITS Deployment Plan Projects**

Project	Project Description	Deployment Timeframe and Responsible Agency <sup>1</sup>	Opinion of Probable Cost and Funding Status	Applicable ITS Service Packages
Jackson Area MPO Data Warehouse Implementation	Develop a transportation data warehouse that includes region-wide transportation data gathered from the ITS network and various agencies.	Long-Term: Jackson MTPO	Funding Identified: No	AD1 – ITS Data Mart AD3 – ITS Virtual Data Warehouse

<sup>1</sup>Deployment timeframes include short-term (0-5 years), mid-term (5-10 years), and long-term (10+ years).

## 7. USE AND MAINTENANCE PLAN

The Regional ITS Architecture developed for the Jackson Region addresses the Region's vision for ITS implementation at the time the plan was developed. As the Region grows, needs will change and as technology progresses, new ITS opportunities will arise. Shifts in regional needs and focus as well as changes in the National ITS Architecture will necessitate that the Jackson Regional ITS Architecture be updated periodically to remain a useful resource for the Region. As projects are developed and deployed, it will be important that those projects conform to the Regional ITS Architecture so that they are consistent with both the Region's vision for ITS as well as the National standards described in the Regional ITS Architecture. In some cases, if projects do not conform, it may be necessary to modify the Regional ITS Architecture to reflect changes in the Region's vision for ITS rather than modify the project. In this Section, a process for determining architecture conformity of projects is presented and a plan for how to maintain and update the Regional ITS Architecture is described.

In 2001 the FHWA issued Final Rule 23 CFR 940, which required that ITS projects using federal funds (or ITS projects that integrate with systems that were deployed with federal funds) conform to a regional ITS architecture and also be developed using a systems engineering process. The purpose of Section 7 of this report is to discuss how the Jackson Regional ITS Architecture can be used to support meeting the ITS architecture conformity and systems engineering requirements. A process for maintaining the Regional ITS Architecture, including the Regional ITS Deployment Plan, which has been incorporated as Section 6 of the Regional ITS Architecture, is also presented. In Section 7.2 the systems engineering analysis requirements and the guidance provided by TDOT and the FHWA Tennessee Division are discussed. In Section 7.3, the process for determining ITS architecture conformity of an ITS project is presented.

The Regional ITS Architecture is considered a living document. Shifts in regional focus and priorities, changes and new developments in technology, and changes to the National ITS Architecture will necessitate that the Jackson Regional ITS Architecture be updated to remain a useful resource for the Region. In the Regional ITS Architecture, a process for maintaining the plan was developed in coordination with stakeholders. The process covers both major updates to the Regional ITS Architecture as well as minor changes that may be needed between major updates of the documents. These processes have been included in this document in Sections 7.3 and 7.4.

### 7.1 Incorporation into the Regional Planning Process

Stakeholders invested a considerable amount of effort in the development of the Regional ITS Architecture for the Jackson Region. The plan needs to be incorporated into the regional planning process so that the ITS vision for the Region is considered when implementing ITS projects in the future, and to ensure that the Region remains eligible for federal funding. The FHWA and FTA require that any project that is implemented with federal funds conform to the Regional ITS Architecture. Many metropolitan or transportation planning organizations around the country now require that an agency certify that a project with ITS elements conforms to the Regional ITS Architecture before allowing the project to be included in the Transportation Improvement Program (TIP).

Stakeholders in the Jackson Region agreed that as projects are submitted for inclusion in the TIP, each project should be evaluated by the submitting agency to determine if the project includes any ITS elements. If the project contains any ITS elements, then the project needs to be reviewed to determine if the ITS elements are in conformance with the Regional ITS Architecture. The submitting agency will perform this examination as part of the planning process using the procedure outlined in Section 7.3, and the Jackson Area MPO will review each project to confirm it does conform to the Regional ITS Architecture.

## 7.2 Systems Engineering Analysis

In order to assist agencies with meeting the requirements of the TDOT Traffic Design Manual Chapter 8 – Intelligent Transportation Systems, TDOT and the FHWA Tennessee Division Office developed a guidance document entitled “Standardized Procedures for Implementing ITS Regulations.” The guidance document indicates that unless projects are categorically excluded, a systems engineering analysis must be performed. Projects may be categorically excluded because they do not use federal funding or they are an ITS system expansion that do not add new functionality. For example, installation of an isolated traffic signal or expansion of a freeway management system through the deployment of additional CCTV cameras would be categorically excluded and not require a systems engineering analysis. It should be noted that Chapter 8 of the TDOT Traffic Design Manual is currently being updated, and should be complete by the end of 2015. Additionally, the TDOT Local Programs Development Office has developed similar guidance associated with performing a systems engineering analysis, which is available in the TDOT Local Government Guidelines for the Management of Federal and State Funded Transportation Projects. The Local Government Guidelines reference the Chapter 8 of the TDOT Traffic Design Manual for additional guidance.

The goal of performing a systems engineering analysis is to systematically think through the project deployment process. Thorough upfront planning has been shown to help control costs and ensure schedule adherence. The Tennessee procedures indicate that the following should be included in a systems engineering analysis:

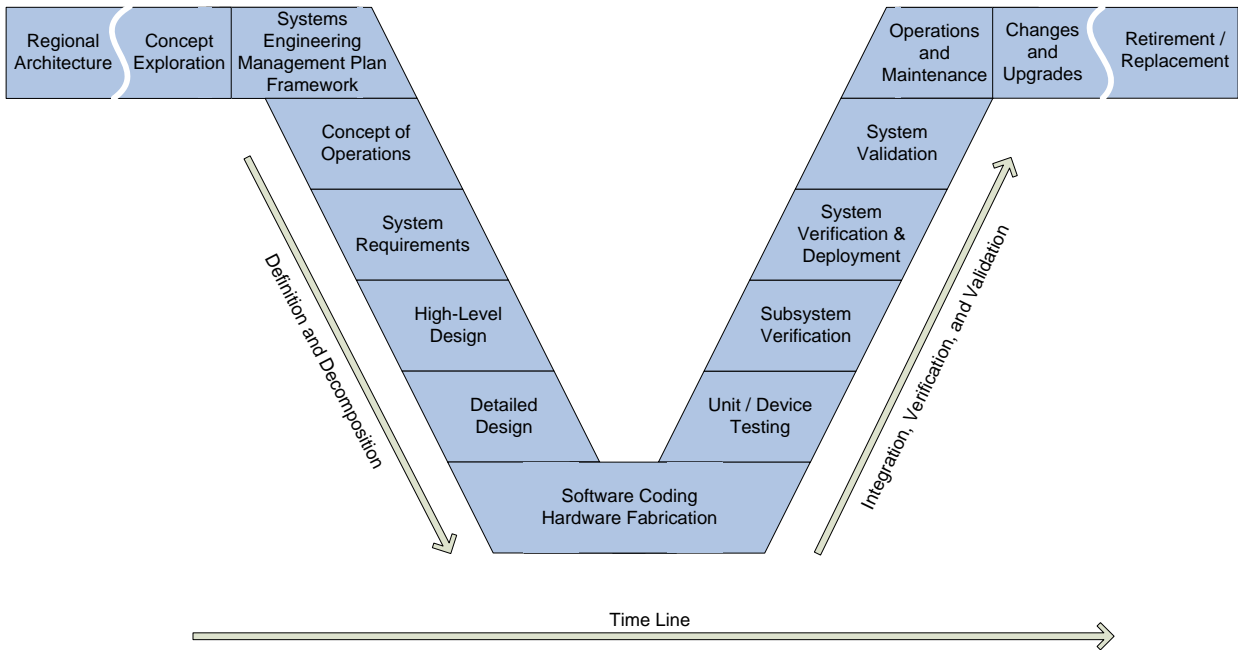

- Identification of portions of the Regional ITS Architecture being implemented;
- Identification of participating agencies roles and responsibilities;
- Definition of system requirements;
- Analysis of alternative system configurations and technology options that meet the system requirements;
- Identification of various procurement options;
- Identification of applicable ITS standards and testing procedures; and
- Documentation of the procedures and resources necessary for operations and management of the system.

The Jackson Regional ITS Architecture and associated Turbo Architecture database can supply information for many of the required components for a systems engineering analysis. These include:

- Portions of the Regional ITS Architecture being implemented (discussed in Section 7.3);
- Participating agencies roles and responsibilities;
- Definition of system requirements (identified in the Jackson Regional ITS Architecture Turbo Architecture database equipment packages); and
- Applicable ITS standards (identified using the ITS service package data flows from the Jackson Regional ITS Architecture document and the National standards associated with the ITS service package data flows).

The Vee Diagram, shown as **Figure 9**, is frequently used in systems engineering discussions to demonstrate where the Regional ITS Architecture and systems engineering process fits into the life cycle of an ITS project. The Regional ITS Architecture is shown unattached from the rest of the diagram because it is not specifically project related, and an undetermined amount of time can pass between the architecture development and the beginning of project implementation. Traveling along the diagram, the systems engineering process addresses concept exploration, the

systems engineering management plan framework, concept of operations, and systems requirements.

**Figure 9 – Systems Engineering Vee Diagram**

The Tennessee guidance document contains an example worksheet to aid in the preparation of a systems engineering analysis. During the process, if it is determined that a project is not adequately addressed in the Regional ITS Architecture, the Regional ITS Architecture maintenance process should be used to document the necessary changes.

**7.3 Process for Determining Architecture Conformity**

The Jackson Regional ITS Architecture documents the customized service packages that were developed as part of the ITS architecture process. To satisfy federal requirements and remain eligible to use federal funds, a project must be accurately documented. The steps of the process are as follows:

- Identify the ITS components in the project;
- Identify the corresponding service packages(s) from the Regional ITS Architecture;
- Locate the component within the service package;
- Compare the connections to other agencies or elements documented in the ITS architecture as well as the information flows between them to the connections that will be part of the project ; and
- Document any changes necessary to the ITS Architecture or the project to ensure there is conformance.

The steps for determining ITS architecture conformity of a project are described in more detail below.

### **Step 1 – Identify the ITS Components**

ITS components can be fairly apparent in an ITS focused project such as CCTV or DMS deployments, but could also be included in other types of projects where they are not as apparent. For example, an arterial widening project could include the installation of signal system interconnect, signal upgrades, and the incorporation of the signals in the project limits into a city's closed loop signal system. These are all ITS functions and should be included in the ITS Architecture.

### **Step 2 – Identify the Corresponding Service Packages**

If a project was included in the list of projects identified in the Jackson Regional ITS Deployment Plan, then the applicable service package(s) for that project were also identified. However, ITS projects are not required to be included in the ITS Deployment Plan in order to be eligible for federal funding; therefore, service packages might need to be identified for projects that have not been covered in the ITS Deployment Plan. In that case, the service packages selected and customized for the Jackson Region should be reviewed to determine if they adequately cover the project. Service packages selected for the Jackson Region are identified in **Table 5** of this document and detailed service package definitions are located in **Appendix A**.

### **Step 3 – Identify the Component within the Service Package**

The customized service packages for the Jackson Region are located in **Appendix B**. Once the element is located within the appropriate service package, the evaluator should determine if the element name used in the service package is accurate or if a change to the name is needed. For example, a future element called Municipal TOC was included in the Jackson Regional ITS Architecture. Municipal is used as a general stakeholder name for a municipal government. Detailed planning for additional centers in the Region has not begun and it would not be unusual for a City to select a different name for the TOC once planning and implementation is underway. However, Municipal would be replaced with the City's name. Such a name change should be documented using the process outlined in Section 7.5.

### **Step 4 – Evaluate the Connections and Flows**

The connections and architecture flows documented in the service package diagrams were selected based on the information available at the time the Regional ITS Architecture was developed. As the projects are designed, decisions will be made on the system layout that might differ from what is shown in the service package. These changes in the project should be documented in the ITS service packages using the process outlined in Section 7.5.

### **Step 5 – Document Required Changes**

If any changes are needed to accommodate the project under review, Section 7.5 describes how those changes should be documented. Any changes will be incorporated during the next Regional ITS Architecture update. Conformance will be accomplished by documenting how the service package(s) should be modified so that the connections and data flows are consistent with the project.

### 7.4 Regional ITS Architecture Maintenance Process

The Jackson Area MPO will be responsible for leading the process to update the Jackson Regional ITS Architecture and Deployment Plan in coordination with the TDOT Traffic Operations Division. **Table 14** summarizes the maintenance process agreed upon by stakeholders in the Region.

**Table 14 – Jackson Regional ITS Architecture Maintenance Summary**

Maintenance Details	Regional ITS Architecture and Deployment Plan	
	Minor Update	Full Update
<b>Timeframe for Updates</b>	As needed	Review every 4 years in the year preceding the Metropolitan Transportation Plan update to determine if a full update is required
<b>Scope of Update</b>	Review and update service packages to satisfy architecture compliance requirements of projects or to document other changes that impact the Regional ITS Architecture.	Entire Regional ITS Architecture and Deployment Plan
<b>Lead Agency</b>	Jackson Area MPO in Coordination with TDOT	
<b>Participants</b>	Stakeholders impacted by service package modifications	Entire stakeholder group
<b>Results</b>	ITS service package or other change(s) documented for next complete update	Updated Regional ITS Architecture and Deployment Plan document, Appendices, and Turbo Architecture database

It was agreed that a review of the Regional ITS Architecture should occur approximately every four years in the year preceding the Long Range Transportation Plan (LRTP) update to determine if a full update of the Regional ITS Architecture is necessary. The need for an update will depend on the level of ITS implemented in the region since the previous update as well as changes that may have occurred in the National ITS Architecture. The Jackson Area MPO will coordinate with TDOT to determine if an update is required.

By completing a full update of the Regional ITS Architecture in the year prior to the LRTP update (if an update is needed), stakeholders will be able to determine the ITS needs and projects that are most important to the Region and document those needs and projects for consideration when developing the LRTP. The Jackson Area MPO, in coordination with the TDOT Traffic Operations Division, will be responsible for completing the full update. During the update process, all of the stakeholder agencies that participated in the original development of the Regional ITS Architecture and Deployment Plan should be included as well as any other agencies in the Region that are deploying or may be impacted by ITS projects.

Minor changes to the Regional ITS Architecture and Deployment Plan should occur as needed between full updates of the plan. In Section 7.5 of this document, the procedure for submitting a change to the Regional ITS Architecture is documented. Documentation of changes to the Regional ITS Architecture is particularly important if a project is being deployed and requires a change to the Regional ITS Architecture in order to establish conformity.

## 7.5 Procedure for Submitting ITS Architecture Changes between Major Updates

Updates to the Jackson Regional ITS Architecture will occur on a regular basis as described in Section 7.4 to maintain the architecture as a useful planning tool. Between major plan updates, smaller modifications will likely be required to accommodate ITS projects in the Region. Section 7.3 contains step by step guidance for determining whether or not a project requires architecture modifications to the Regional ITS Architecture.

For situations where a change is required, an Architecture Maintenance Documentation Form was developed and is included in **Appendix F**. This form should be completed and submitted to the architecture maintenance contact person identified on the form whenever a change to the Regional ITS Architecture is proposed. There are several key questions that need to be answered when completing the Architecture Maintenance Documentation Form including those described below.

**Change Information:** The type of change that is being requested can include an Administrative Change, Functional Change – Single Agency, Functional Change – Multiple Agency, or a Project Change. A description of each type of change is summarized below.

- **Administrative Change – Basic changes** that do not affect the structure of the ITS service packages in the Regional ITS Architecture. Examples include changes to stakeholder or element names, element status, or data flow status.
- **Functional Change – Single Agency:** Structural changes to the ITS service packages that impact only one agency in the Regional ITS Architecture. Examples include the addition of a new ITS service package or changes to data flow connections of an existing service package. The addition or change would only impact a single agency.
- **Functional Change – Multiple Agencies:** Structural changes to the ITS service packages that have the potential to impact multiple agencies in the Regional ITS Architecture. Examples include the addition of a new ITS service package or changes to data flow connections of an existing ITS service package. The addition or changes would impact multiple agencies and require coordination between the agencies.
- **Project Change – Addition, modification, or removal** of a project in the Regional ITS Deployment Plan Section of the Regional ITS Architecture.

**Description of the requested change:** A brief description of the type of change being requested should be included.

**Service packages being impacted by the change:** Each of the ITS service packages that are impacted by the proposed change should be listed on the ITS Architecture Maintenance Documentation Form. If the proposed change involves creating or modifying an ITS service package, then the agency completing the ITS Architecture Maintenance Documentation Form is asked to include a sketch of the new or modified service package.

**Impact of proposed change on other stakeholders:** If the proposed change is expected to have any impact on other stakeholders in the Region, then those stakeholders should be listed on the ITS Architecture Maintenance Documentation Form. A description of any coordination that has occurred with other stakeholders that may be impacted by the change should be also included. Ideally all stakeholders that may be impacted by the change should be contacted and consensus should be reached on any new or modified ITS service packages that will be included as part of the Regional ITS Architecture.

The Jackson Area MPO will review and accept the proposed changes and forward the form to the TDOT Traffic Operations Division for their records. When a major update is performed, all of the documented changes should be incorporated into the Regional ITS Architecture.

## **APPENDIX A – SERVICE PACKAGE DEFINITIONS**

Service Package	Service Package Name	Description
<b>Traffic Management Service Area</b>		
ATMS01	Network Surveillance	Includes traffic detectors, CCTV cameras, other surveillance equipment, supporting field equipment and fixed point to point communications to transmit the collected data back to a traffic management center.
ATMS02	Traffic Probe Surveillance	Provides an alternative approach for surveillance of the roadway network. Probe vehicles are tracked, and the vehicle's position and speed information are utilized to determine road network conditions such as average speed and congestion conditions.
ATMS03	Traffic Signal Control	Provides the central control and monitoring equipment, communication links, and the signal control equipment that support traffic control at signalized intersections. This service package is consistent with typical traffic signal control systems.
ATMS04	Traffic Metering	Includes central monitoring and control, communications, and field equipment that support metering of traffic. It supports the complete range of metering strategies including ramp, interchange, and mainline metering.
ATMS05	HOV Lane Management	Manages HOV lanes by coordinating freeway ramp meters and connector signals with HOV lane usage signals.
ATMS06	Traffic Information Dissemination	Provides driver information using roadway equipment such as dynamic message signs or highway advisory radio. Information can include traffic and road conditions, closure and detour information, incident information, emergency alerts and driver advisories.
ATMS07	Regional Traffic Management	Sharing of traffic information and control among traffic management centers to support a regional management strategy. The nature of optimization and extent of information and control sharing is determined through working arrangements between jurisdictions.
ATMS08	Traffic Incident Management System	Manages both unexpected incidents and planned events so that the impact to the transportation network and traveler safety is minimized. This service package includes incident detection capabilities and coordination with other agencies. It supports traffic operations personnel in developing an appropriate response in coordination with emergency management, maintenance and construction management, and other incident response personnel.
ATMS09	Traffic Decision Support and Demand Management	Recommends courses of action to traffic operations personnel based on an assessment of current and forecast road network performance. All recommendations are based on historical evaluation, real-time assessment, and forecast of the roadway network performance based on predicted travel demand patterns. This service package also collects air quality, parking availability, transit usage, and vehicle occupancy data to support TDM, where applicable.
ATMS10	Electronic Toll Collection	Provides toll operators with the ability to collect tolls electronically and detect and process violations.
ATMS11	Emissions Monitoring and Management	Monitors individual vehicle emissions and provides general air quality monitoring using distributed sensors to collect the data.
ATMS12	Roadside Lighting System Control	Manages electrical lighting systems by monitoring operational conditions and using the lighting controls to vary the amount of light provided along the roadside.
ATMS13	Standard Railroad Grade Crossing	Manages highway traffic at highway-rail intersections (HRIs) where rail operational speeds are less than 80 mph.
ATMS14	Advanced Railroad Grade Crossing	Manages highway traffic at highway-rail intersections (HRIs) where operational speeds are greater than 80 mph. Augments Standard Railroad Grade Crossing service package with additional safety features to mitigate the risks associated with higher rail speeds.
ATMS15	Railroad Operations Coordination	Provides an additional level of strategic coordination between freight rail operations and traffic management centers. Could include train schedules, maintenance schedules or any other anticipated HRI closures.

Service Package	Service Package Name	Description
<b>Traffic Management Service Area (continued)</b>		
ATMS16	Parking Facility Management	Provides enhanced monitoring and management of parking facilities. Service package assists in the management of parking operations, coordinates with transportation authorities, and supports electronic collection of parking fees.
ATMS17	Regional Parking Management	Supports communication and coordination between parking facilities as well as coordination between parking facilities and traffic and transit management systems.
ATMS18	Reversible Lane Management	Provides for the management of reversible lane facilities and includes the field equipment, physical lane access controls, and associated control electronics.
ATMS19	Speed Warning and Enforcement	Monitors vehicle speeds and supports warning drivers when their speed is excessive. Also the service includes notifications to an enforcement agency to enforce the speed limit of the roadway.
ATMS20	Drawbridge Management	Supports systems that manage drawbridges at rivers and canals and other multimodal crossings. Includes control devices as well as traveler information systems.
ATMS21	Roadway Closure Management	Closes roadways to vehicular traffic when driving conditions are unsafe, maintenance must be performed, or other situations. Service package covers general road closures applications; specific closure systems that are used at railroad grade crossings, drawbridges, reversible lanes, etc. are covered by other service packages.
ATMS22	Variable Speed Limits	Sets variable speed limits along a roadway to create more uniform speeds, to promote safer driving during adverse conditions (such as fog), and/or to reduce air pollution. Also known as speed harmonization, this service monitors traffic and environmental conditions along the roadway.
ATMS23	Dynamic Lane Management and Shoulder Use	Includes the field equipment, physical overhead lane signs and associated control electronics that are used to manage and control specific lanes and/or the shoulders along a roadway. This equipment can be used to change the lane configuration on the roadway according to traffic demand and lane destination along a typical roadway section or on approach to or access from a border crossing, multimodal crossing or intermodal freight depot. This package can be used to allow temporary or interim use of shoulders as travel lanes.
ATMS24	Dynamic Roadway Warning	Includes systems that dynamically warn drivers approaching hazards on a roadway. These dynamic roadway warning systems can alert approaching drivers via warning signs, flashing lights, in-vehicle messages, etc. Such systems can increase the safety of a roadway by reducing the occurrence of incidents.
ATMS25	VMT Road User Payment	Facilitates charging fees to roadway vehicle owners for using specific roadways with potentially differential payment rates based on time-of-day, which specific roadway is used, and class of vehicle (a local policy decision by each roadway owner).
ATMS26	Mixed Use Warning Systems	Supports the sensing and warning systems used to interact with pedestrians, bicyclists, and other vehicles that operate on the main vehicle roadways, or on pathways which intersect the main vehicle roadways. These systems could allow automated warning or active protection for this class of users.
<b>Emergency Management Service Area</b>		
EM01	Emergency Call-Taking and Dispatch	Provides basic public safety call-taking and dispatch services. Includes emergency vehicle equipment, equipment used to receive and route emergency calls, wireless communications and coordination between emergency management agencies.
EM02	Emergency Routing	Supports automated vehicle location and dynamic routing of emergency vehicles. Traffic information, road conditions and suggested routing information are provided to enhance emergency vehicle routing. Includes signal preemption and priority applications.

Service Package	Service Package Name	Description
<b>Emergency Management Service Area (continued)</b>		
EM03	Mayday and Alarms Support	Allows the user to initiate a request for emergency assistance and enables the emergency management subsystem to locate the user, gather information about the incident and determine the appropriate response.
EM04	Roadway Service Patrols	Supports the roadway service patrol vehicles that aid motorists, offering rapid response to minor incidents (flat tire, crashes, out of gas) to minimize disruption to the traffic stream. This service package monitors service patrol vehicle locations and supports vehicle dispatch.
EM05	Transportation Infrastructure Protection	Includes the monitoring of transportation infrastructure (e.g. bridges, tunnels and management centers) for potential threats using sensors, surveillance equipment, barriers and safeguard systems to preclude an incident, control access during and after an incident or mitigate the impact of an incident. Threats can be acts of nature, terrorist attacks or other incidents causing damage to the infrastructure.
EM06	Wide-Area Alert	Uses ITS driver and traveler information systems to alert the public in emergency situations such as child abductions, severe weather, civil emergencies or other situations that pose a threat to life and property.
EM07	Early Warning System	Monitors and detects potential, looming and actual disasters including natural, technological and man-made disasters.
EM08	Disaster Response and Recovery	Enhances the ability of the surface transportation system to respond to and recover from disasters. Supports coordination of emergency response plans, provides enhanced access to the scene and better information about the transportation system in the vicinity of the disaster, and maintains situation awareness.
EM09	Evacuation and Reentry Management	Supports evacuation of the general public from a disaster area and manages subsequent reentry to the disaster area. This service package supports both anticipated, well-planned and orderly evacuations such as for a hurricane, as well as sudden evacuations with little or no time for preparation or public warning such as a terrorist act. Employs a number of strategies to maximize capacity along an evacuation route including coordination with transit.
EM10	Disaster Traveler Information	Use of ITS to provide disaster-related traveler information to the general public, including evacuation and reentry information and other information concerning the operation of the transportation system during a disaster.
<b>Maintenance and Construction Management Service Area</b>		
MC01	Maintenance and Construction Vehicle and Equipment Tracking	Tracks the location of maintenance and construction vehicles and other equipment to ascertain the progress of their activities.
MC02	Maintenance and Construction Vehicle Maintenance	Performs vehicle maintenance scheduling and manages both routine and corrective maintenance activities. Includes on-board sensors capable of automatically performing diagnostics.
MC03	Road Weather Data Collection	Collects current road weather conditions using data collected from environmental sensors deployed on and about the roadway.
MC04	Weather Information Processing and Distribution	Processes and distributes the environmental information collected from the Road Weather Data Collection service package. This service package uses the environmental data to detect environmental hazards such as icy road conditions, high winds, dense fog, etc. so system operators can make decisions on corrective actions to take.
MC05	Roadway Automated Treatment	Automatically treats a roadway section based on environmental or atmospheric conditions. Includes the sensors that detect adverse conditions, automated treatment (such as anti-icing chemicals), and driver information systems.
MC06	Winter Maintenance	Supports winter road maintenance. Monitors environmental conditions and weather forecasts and uses the information to schedule winter maintenance activities.

Service Package	Service Package Name	Description
<b>Maintenance and Construction Management Service Area (continued)</b>		
MC07	Roadway Maintenance and Construction	Supports numerous services for scheduled and unscheduled maintenance and construction on a roadway system or right-of-way. Environmental conditions information is also received from various weather sources to aid in scheduling maintenance and construction activities.
MC08	Work Zone Management	Directs activity in work zones, controlling traffic through portable dynamic message signs and informing other groups of activity for better coordination management. Also provides speed and delay information to motorists prior to the work zone.
MC09	Work Zone Safety Monitoring	Includes systems that improve work crew safety and reduce collisions between the motoring public and maintenance and construction vehicles. Detects vehicle intrusions in work zones and warns workers and drivers of safety hazards when encroachment occurs.
MC10	Maintenance and Construction Activity Coordination	Supports the dissemination of maintenance and construction activity to centers that can utilize it as part of their operations. (i.e., traffic management, transit, emergency management)
MC11	Environmental Probe Surveillance	Collects data from vehicles in the road network that can be used to directly measure on infer current environmental conditions.
MC12	Infrastructure Monitoring	Monitors the condition of pavement, bridges, tunnels, associated hardware, and other transportation-related infrastructure using both fixed and vehicle-based infrastructure monitoring sensors. Monitors vehicle probes used to determine current pavement conditions.
<b>Public Transportation Service Area</b>		
APTS01	Transit Vehicle Tracking	Monitors current transit vehicle location using an automated vehicle location system. Location data may be used to determine real time schedule adherence and update the transit system's schedule in real time.
APTS02	Transit Fixed-Route Operations	Performs vehicle routing and scheduling, as well as operator assignment and system monitoring for fixed-route and flexible-route transit services.
APTS03	Demand Response Transit Operations	Performs vehicle routing and scheduling, as well as operator assignment and system monitoring for demand responsive transit services.
APTS04	Transit Fare Collection Management	Manages transit fare collection on-board transit vehicles and at transit stops using electronic means. Allows the use of a traveler card or other electronic payment device.
APTS05	Transit Security	Provides for the physical security of transit passengers and transit vehicle operators. Includes on-board security cameras and panic buttons.
APTS06	Transit Fleet Management	Supports automatic transit maintenance scheduling and monitoring for both routine and corrective maintenance.
APTS07	Multi-modal Coordination	Establishes two way communications between multiple transit and traffic agencies to improve service coordination.
APTS08	Transit Traveler Information	Provides transit users at transit stops and on board transit vehicles with ready access to transit information. Services include stop annunciation, imminent arrival signs and real-time transit schedule displays. Systems that provide custom transit trip itineraries and other tailored transit information services are also represented by this service package.
APTS09	Transit Signal Priority	Determines the need for transit priority on routes and at certain intersections and requests transit vehicle priority at these locations to improve on-time performance of the transit system.
APTS10	Transit Passenger Counting	Counts the number of passengers entering and exiting a transit vehicle using sensors mounted on the vehicle and communicates the collected passenger data back to the management center.
APTS11	Multi-modal Connection Protection	Supports the coordination of multimodal services to optimize the travel time of travelers as they move from mode to mode (or to different routes within a single mode).

Service Package	Service Package Name	Description
<b>Commercial Vehicle Operations Service Area</b>		
CVO01	Carrier Operations and Fleet Management	Provides the capabilities to manage a fleet of commercial vehicles. Vehicle routing and tracking as well as notification of emergency management of any troublesome route deviations (such as a HAZMAT vehicle) are part of this service package.
CVO02	Freight Administration	Tracks the movement of cargo and monitors the cargo condition.
CVO03	Electronic Clearance	Provides for automatic clearance at roadside check facilities. Allows a good driver/vehicle/carrier to pass roadside facilities at highway speeds using transponders and dedicated short range communications to the roadside.
CVO04	CV Administrative Processes	Provides for electronic application, processing, fee collection, issuance and distribution of CVO credentials and tax filing.
CVO05	International Border Electronic Clearance	Provides for automated clearance at international border crossings.
CVO06	Weigh-In-Motion	Provides for high speed weigh-in-motion with or without automated vehicle identification capabilities.
CVO07	Roadside CVO Safety	Provides for automated roadside safety monitoring and reporting. Automates commercial vehicle safety inspections at the roadside check facilities.
CVO08	On-board CVO Safety	Provides for on-board commercial vehicle safety monitoring and reporting, and includes support for collecting on-board safety data via transceivers or other means. The on-board safety data are assessed by an off-board system. In some cases the monitoring and safety assessment may occur remotely (i.e., not at a roadside site).
CVO09	CVO Fleet Maintenance	Supports maintenance of CVO fleet vehicles with on-board monitoring equipment and automated vehicle location capabilities.
CVO10	HAZMAT Management	Integrates incident management capabilities with commercial vehicle tracking to assure effective treatment of HAZMAT material and incidents.
CVO11	Roadside HAZMAT Security Detection and Mitigation	Provides the capability to detect and classify security sensitive HAZMAT on commercial vehicles using roadside sensing and imaging technology. Credentials information can be accessed to verify if the commercial driver, vehicle and carrier are permitted to transport the identified HAZMAT.
CVO12	CV Driver Security Authentication	Provides the ability for fleet and freight management to detect when an unauthorized commercial vehicle driver attempts to drive a vehicle based on stored identity information. If an unauthorized driver has been detected the commercial vehicle can be disabled.
CVO13	Freight Assignment Tracking	Provides for the planning and tracking of the commercial vehicle, freight equipment and the commercial vehicle driver.
<b>Traveler Information Service Area</b>		
ATIS01	Broadcast Traveler Information	Collects traffic conditions, advisories, general public transportation, toll and parking information, incident information, roadway maintenance and construction information, air quality and weather information, and broadly disseminates this information through existing infrastructures (radio, cell phones, etc.).
ATIS02	Interactive Traveler Information	Provides tailored information in response to a traveler request. The traveler can obtain current information regarding traffic conditions, roadway maintenance and construction, transit services, ride share/ride match, parking management, detours and pricing information.
ATIS03	Autonomous Route Guidance	Using vehicle location and other information, this service package enables route planning and detailed route guidance based on static, stored information.
ATIS04	Dynamic Route Guidance	Offers advanced route planning and guidance that is responsive to current conditions.
ATIS05	ISP Based Trip Planning and Route Guidance	Offers the user pre-trip route planning and en-route guidance services. Routes may be based on static or real time network conditions.

Service Package	Service Package Name	Description
<b>Traveler Information Service Area</b>		
ATIS06	Transportation Operations Data Sharing	Collects, processes, and stores current information on traffic and travel conditions and other information about the current state of the transportation network and makes the information available to transportation system operators.
ATIS07	Travel Service Information and Reservation	Provides travel information and reservation services to the user. This service package provides multiple ways for accessing information either while en route in a vehicle using wide-area wireless communications or pre-trip via fixed-point to fixed-point connections.
ATIS08	Dynamic Ridesharing	Provides dynamic ridesharing/ride matching services to travelers.
ATIS09	In Vehicle Signing	Supports the distribution of traffic and travel advisory information to drivers through in-vehicle devices.
ATIS10	Short Range Communications Traveler Information	Provides location-specific or situation-relevant information to travelers in vehicles using Dedicated Short Range Communications (DSRC) infrastructure supporting mobility applications for connected vehicles. Delivers real-time traveler information including travel times, incident information, road conditions, and emergency traveler information to vehicles as they pass DSRC roadside equipment along their route.
<b>Archived Data Management Service Area</b>		
AD1	ITS Data Mart	Provides a focused archive that houses data collected and owned by a single agency or other organization. Focused archive typically covers a single transportation mode and one jurisdiction.
AD2	ITS Data Warehouse	Includes all the data collection and management capabilities of the ITS Data Mart. Adds the functionality to allow collection of data from multiple agencies and data sources across modal and jurisdictional boundaries.
AD3	ITS Virtual Data Warehouse	Provides the same broad access to multimodal, multidimensional data from varied sources as in the ITS Data Warehouse Service Package, but provides this access using enhanced interoperability between physically distributed ITS archives that are each locally managed.
<b>Vehicle Safety Service Area</b>		
AVSS01	Vehicle Safety Monitoring	Diagnoses critical components of the vehicle and warns the driver of potential dangers. On-board sensors will determine the vehicle's condition, performance, and on-board safety data and display that information to the driver.
AVSS02	Driver Safety Monitoring	Determines the driver's condition and warns the driver of potential dangers. On-board sensors will determine the driver's condition, performance, and on-board safety data and display that information to the driver.
AVSS03	Longitudinal Safety Monitoring	Uses on-board safety sensors and collision sensors to monitor the areas in front of and behind the vehicle and present warnings to the driver about potential hazards.
AVSS04	Lateral Safety Warning	Uses on-board safety sensors and collision sensors to monitor the areas to the sides of the vehicle and present warnings to the driver about potential hazards.
AVSS05	Intersection Safety Warning	Determines the probability of a collision in an equipped intersection (either highway-highway or highway-rail) and provides timely warnings to drivers in response to hazardous conditions. Monitors in the roadway infrastructure assess vehicle locations and speeds near an intersection. Using this information, a warning is determined and communicated to the approaching vehicle using a short range communications system. Information can be provided to the driver through the ATIS09 – In-Vehicle Signing service package.
AVSS06	Pre-Crash Restraint Deployment	Provides in-vehicle sensors to monitor the vehicle's local environment (lateral and longitudinal gaps, weather, and roadway conditions), determine collision probability, and deploy a pre-crash safety system.

Service Package	Service Package Name	Description
<b>Vehicle Safety Service Area (continued)</b>		
AVSS07	Driver Visibility Improvement	Enhances the driver visibility using an enhanced vision system. On-board display hardware is needed.
AVSS08	Advanced Vehicle Longitudinal Control	Automates the speed and headway control functions on board the vehicle utilizing safety sensors and collision sensors combined with vehicle dynamics processing to control the throttle and brakes. Requires on-board sensors to measure longitudinal gaps and a processor for controlling the vehicle speed.
AVSS09	Advanced Vehicle Lateral Control	Automates the steering control on board the vehicle utilizing safety sensors and collision sensors combined with vehicle dynamics processing to control the steering. Requires on-board sensors to measure lane position and lateral deviations and a processor for controlling the vehicle steering.
AVSS10	Intersection Collision Avoidance	Determines the probability of an intersection collision and provides timely warnings to approaching vehicles so that avoidance actions can be taken. This service package builds on the intersection collision warning infrastructure and in-vehicle equipment and adds equipment in the vehicle that can take control of the vehicle in emergency situations.
AVSS11	Automated Vehicle Operations	Enables “hands-off” operation of the vehicle on the automated portion of the highway system. Implementation requires lateral lane holding, vehicle speed and steering control, and automated highway system check-in and check-out.
AVSS12	Cooperative Vehicle Safety Systems	Enhances the on-board longitudinal and lateral warning stand-alone systems by exchanging messages wirelessly with other surrounding vehicles. Vehicles send out information concerning their location, speed, and direction to any surrounding vehicles. Special messages from approaching emergency vehicles may also be received and processed.

## **APPENDIX B – CUSTOMIZED ITS SERVICE PACKAGES**

## APPENDIX B

### ITS SERVICE PACKAGE DIAGRAM COMPONENT AND TERMINOLOGY KEY

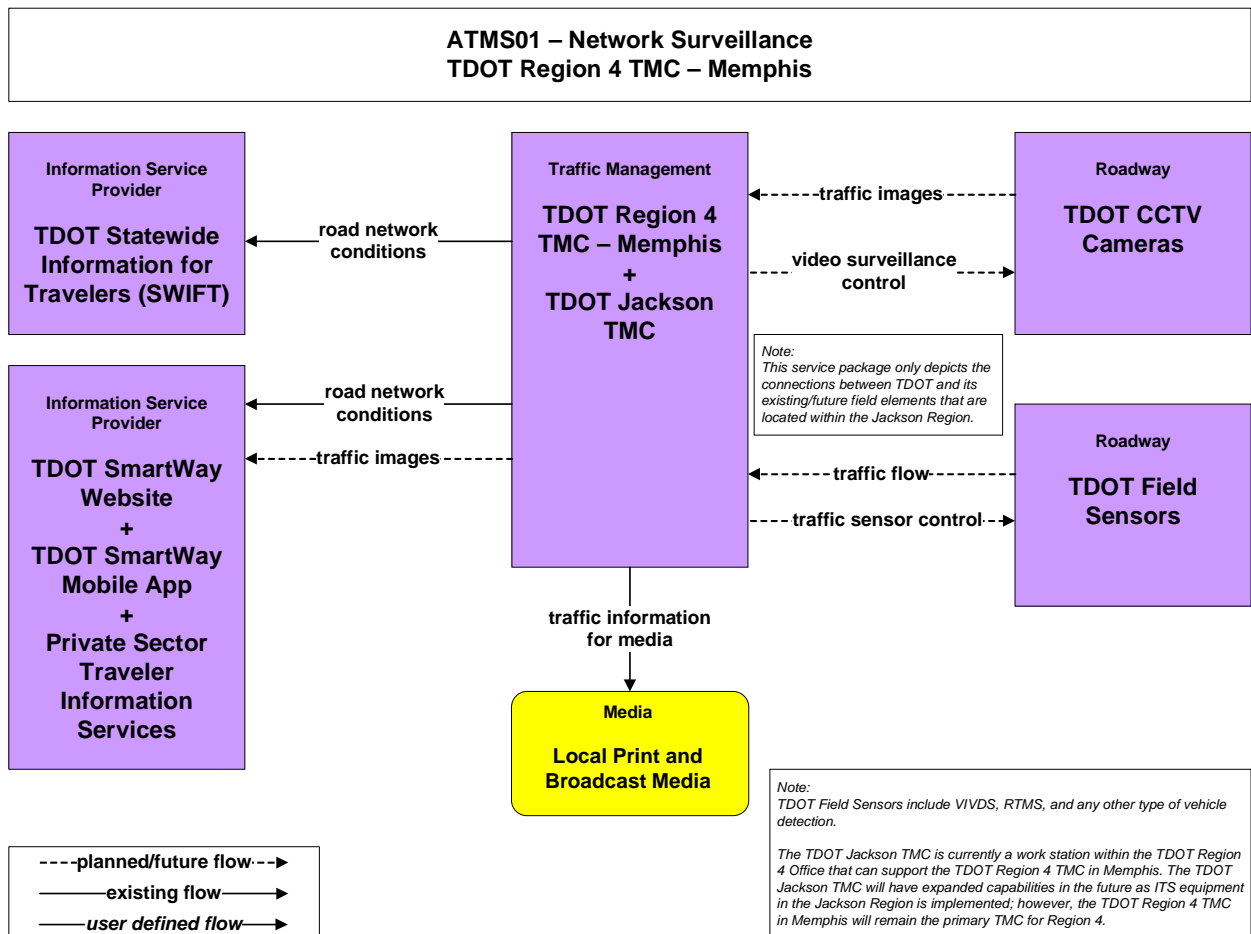

# Jackson Regional ITS Architecture Service Packages

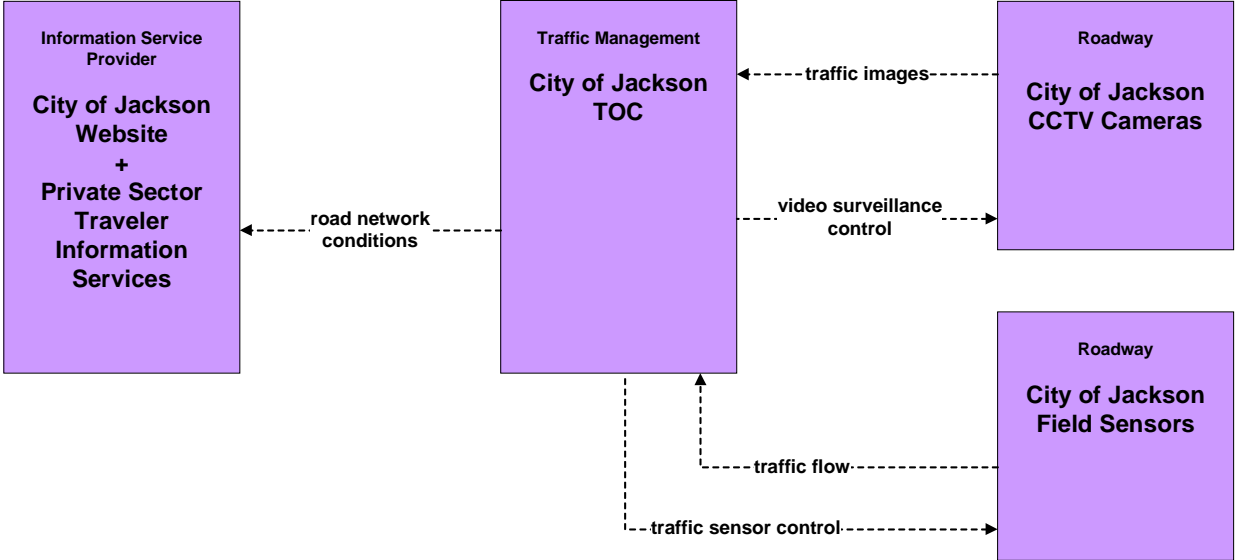

March 2015

Advanced Traffic Management System (ATMS).....	2
Emergency Management (EM).....	11
Maintenance and Construction Management (MC).....	20
Advanced Public Transportation System (APTS).....	26
Advanced Traveler Information System (ATIS).....	35
Archived Data Management (AD).....	38

# Advanced Traffic Management System

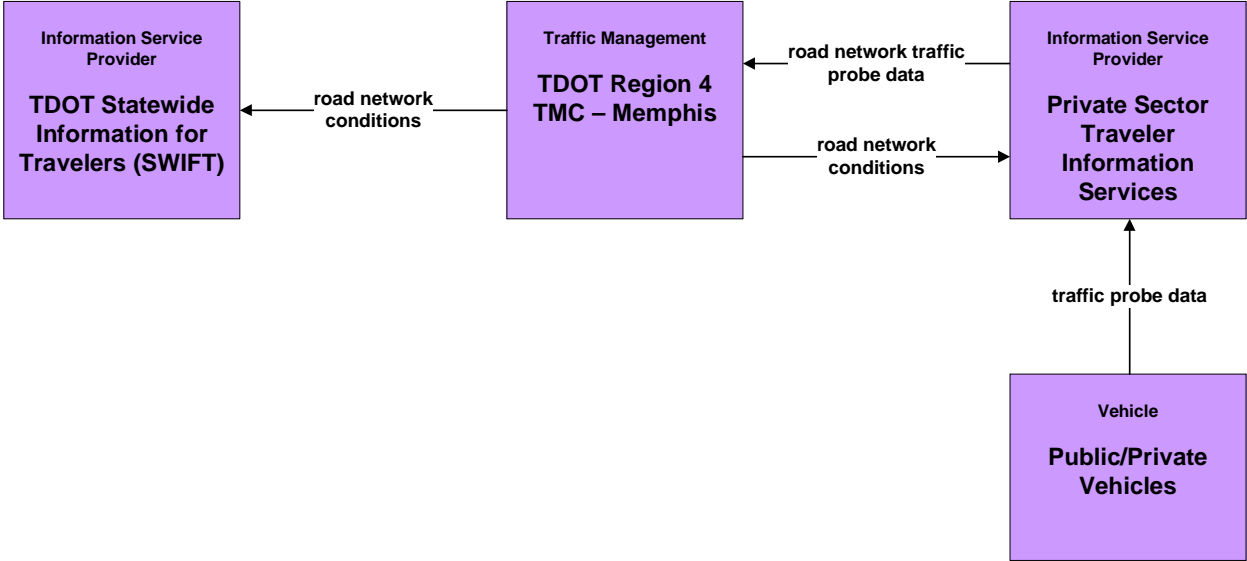

**ATMS01 – Network Surveillance  
City of Jackson**

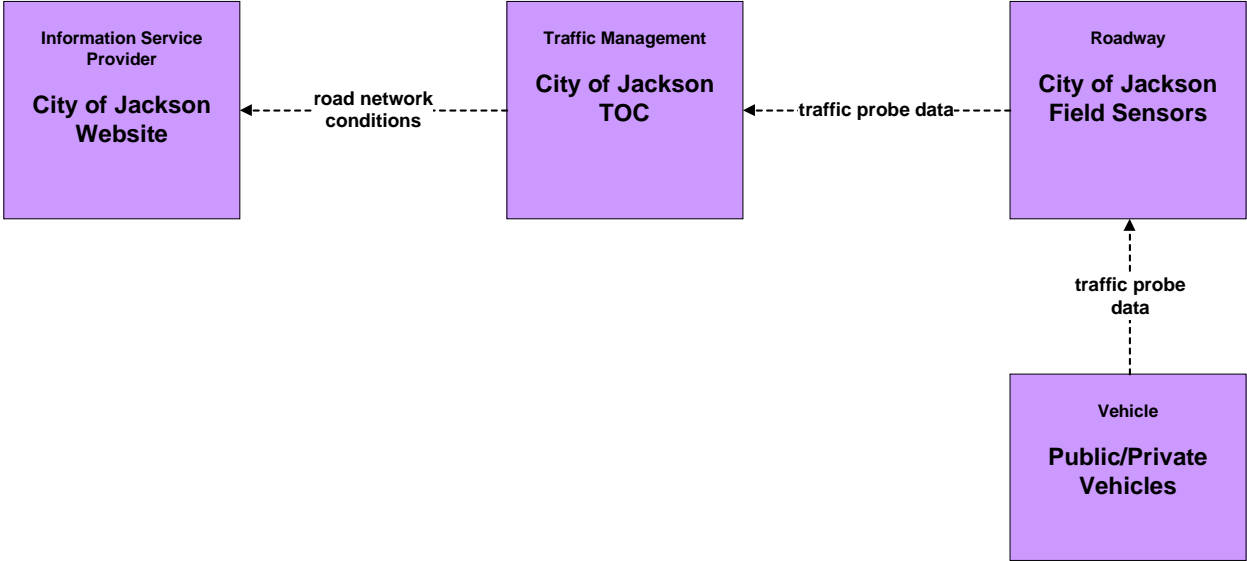

*Note:  
Jackson Field Sensors include VIVDS in-pavement sensing pucks and any other type of vehicle detection. Field Sensor data that includes count and classification data will be collected by the TOC and archived by the MPO as part of AD1.*

**ATMS02 – Traffic Probe Surveillance  
TDOT**

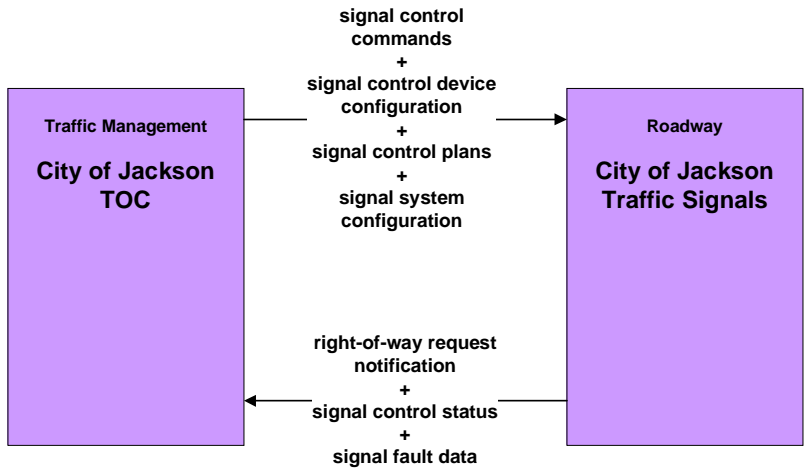

*Note:  
Private Sector Traveler Information Services includes traffic data from INRIX and Google Traffic*

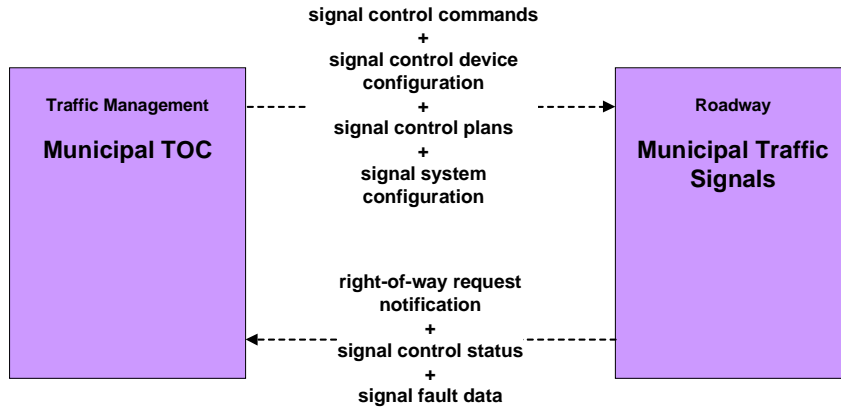

**ATMS02 – Traffic Probe Surveillance  
City of Jackson**

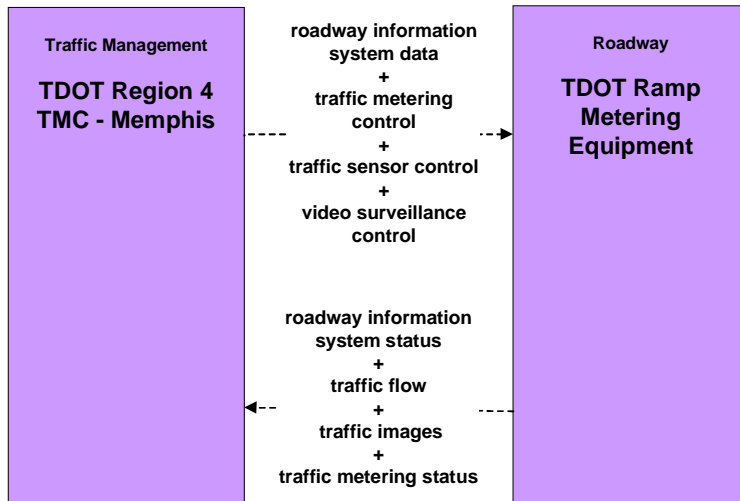

**ATMS03 – Traffic Signal Control  
City of Jackson Signal System**

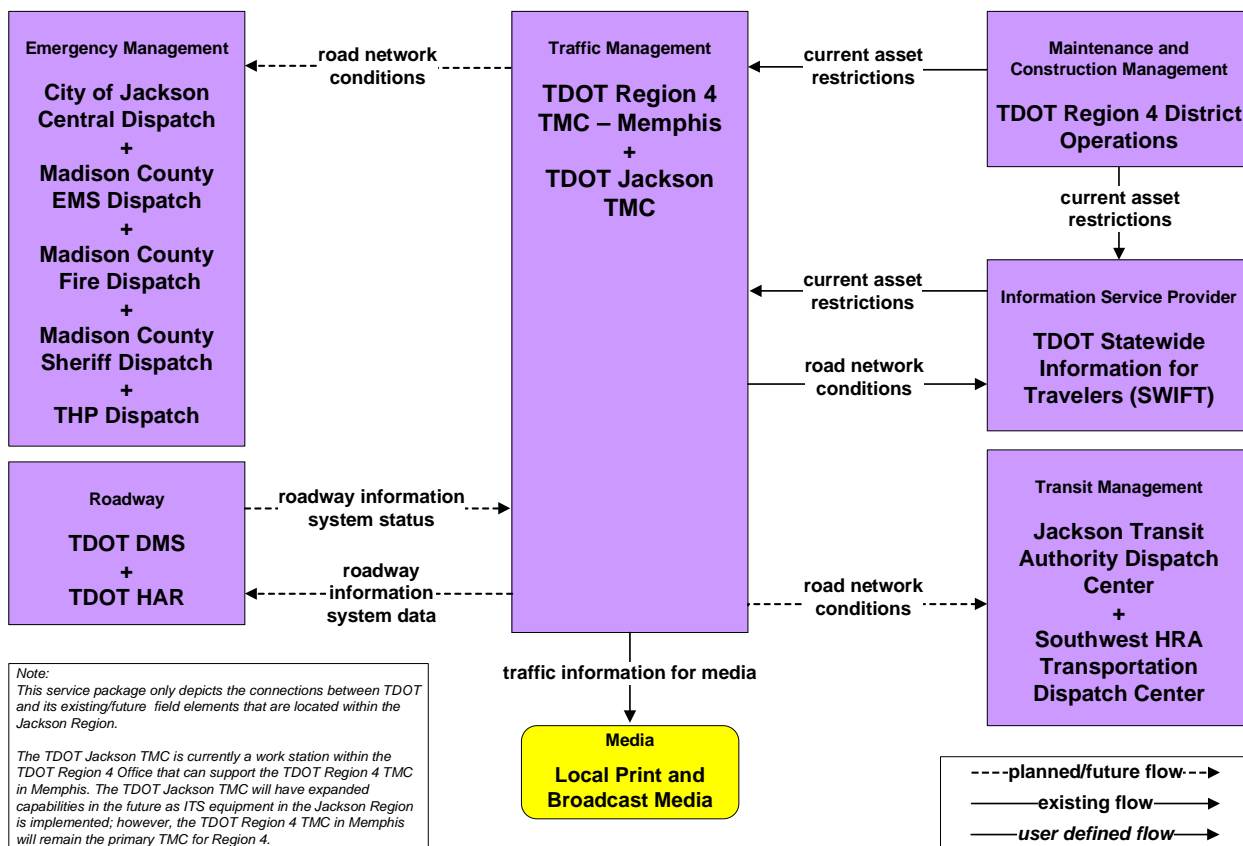

**ATMS03 – Traffic Signal Control  
Municipal Signal System**

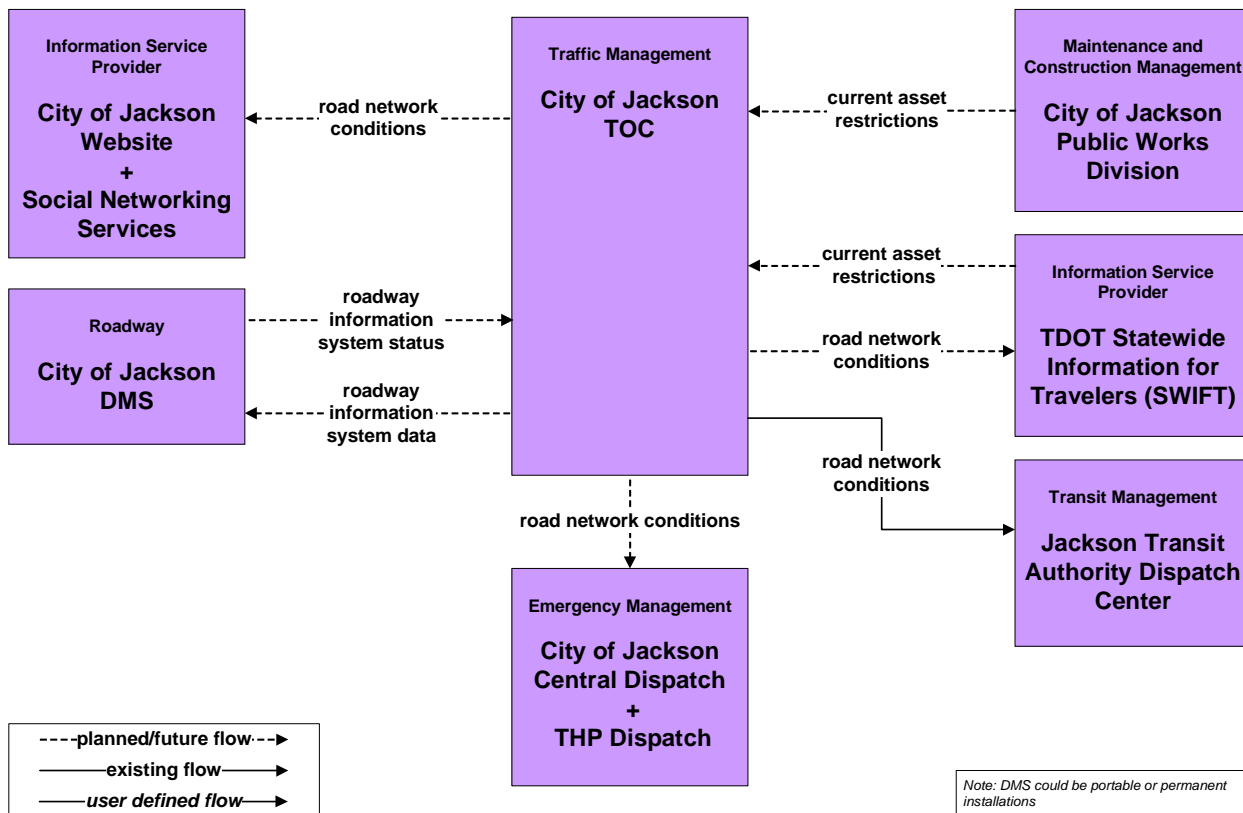

**ATMS04 – Traffic Metering  
TDOT**

**ATMS06 – Traffic Information Dissemination  
 TDOT Region 4 TMC – Memphis**

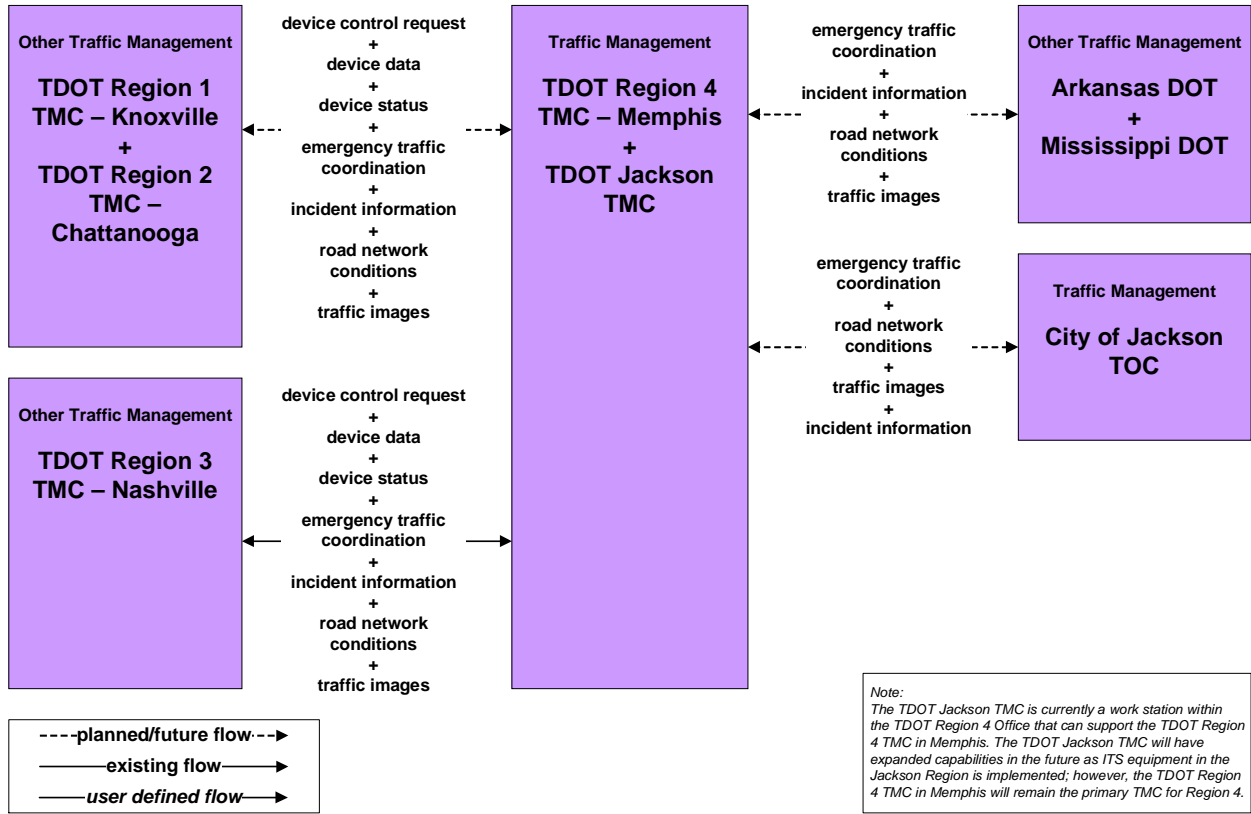

**ATMS06 – Traffic Information Dissemination  
 City of Jackson**

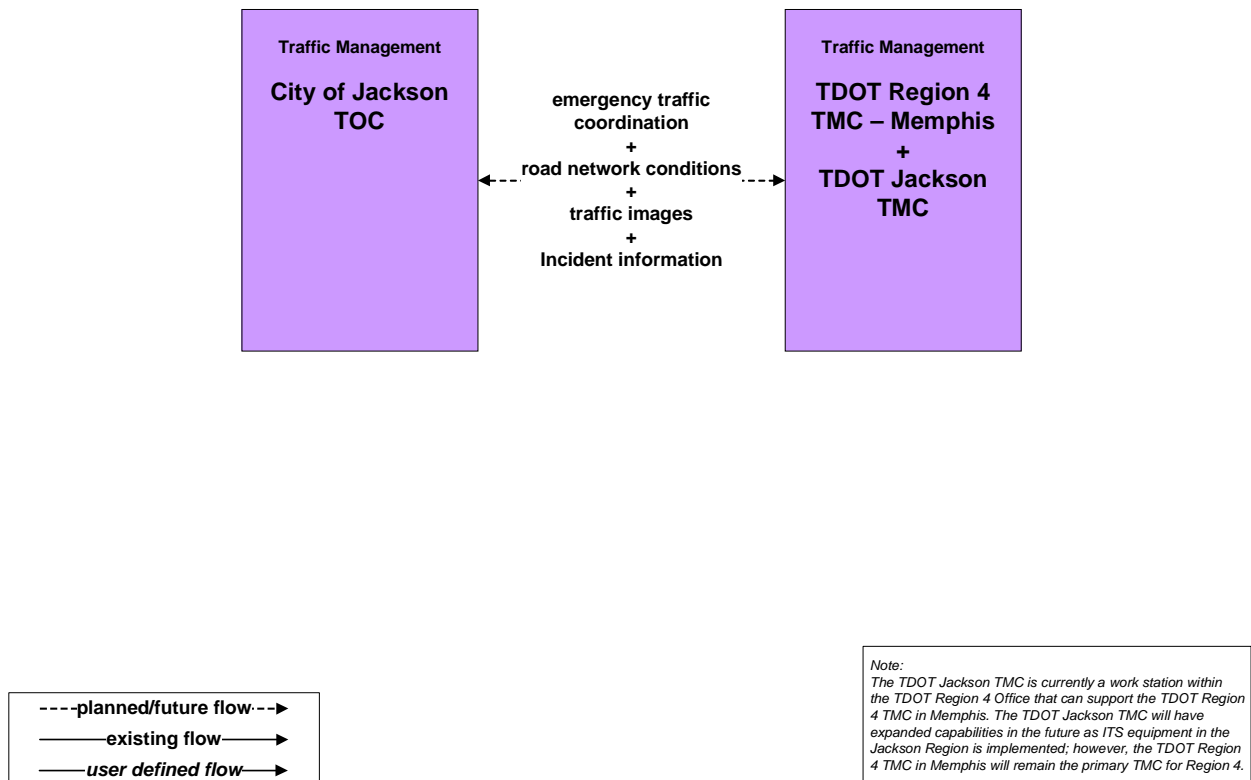

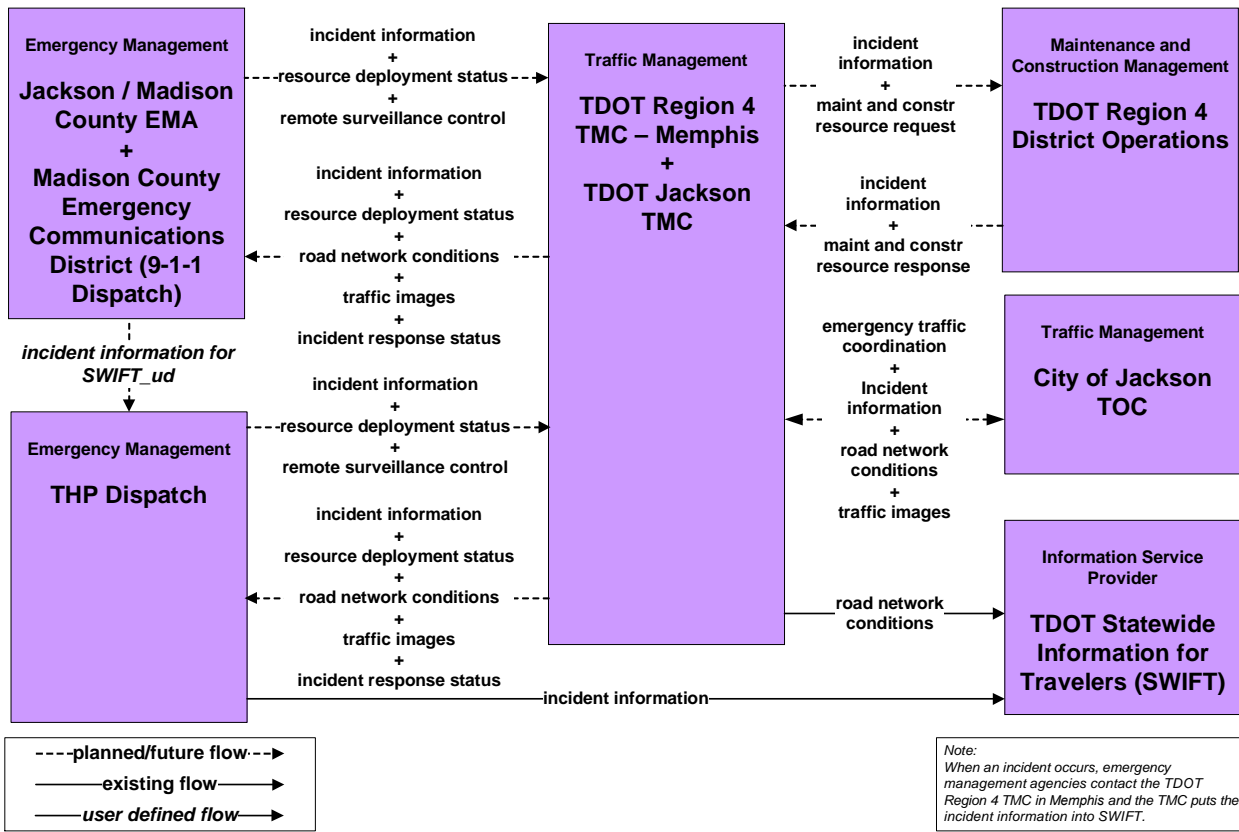

**ATMS07 – Regional Traffic Management  
 TDOT Region 4 TMC – Memphis**

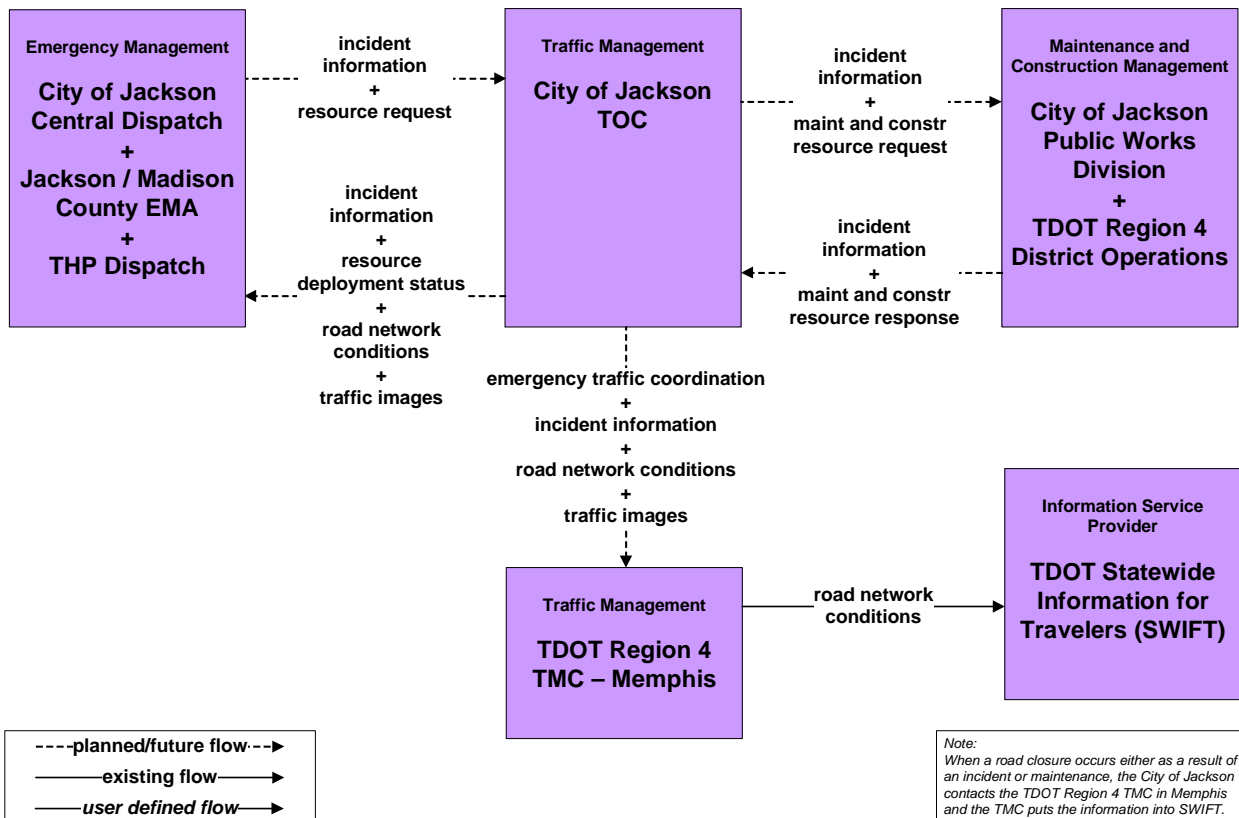

**ATMS07 – Regional Traffic Management  
 City of Jackson**

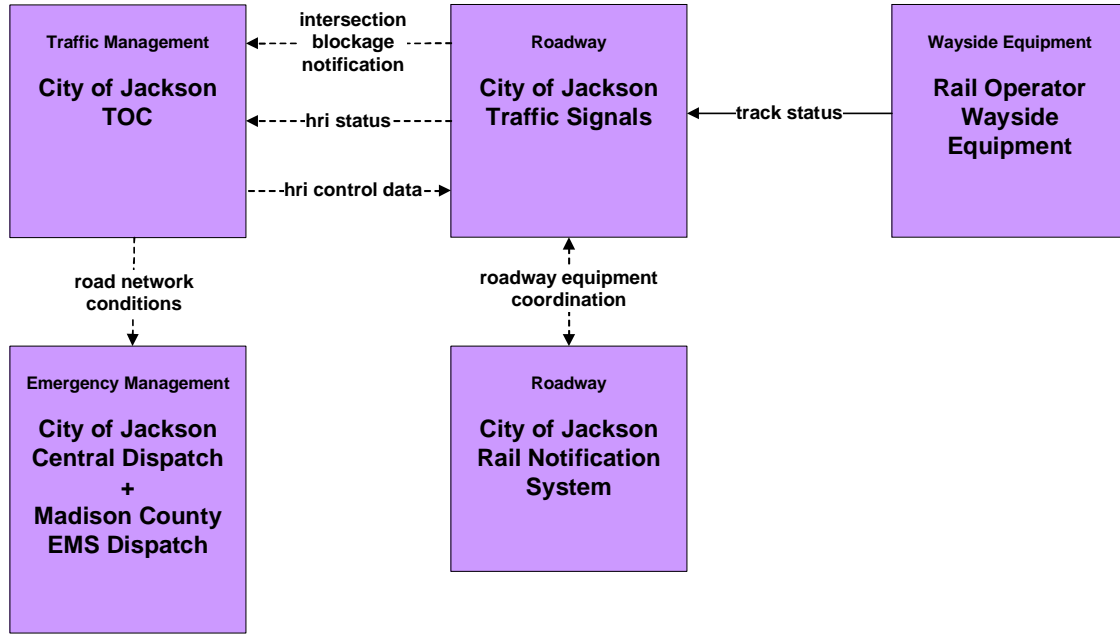

**ATMS08 – Incident Management  
TDOT Region 4 TMC – Memphis**

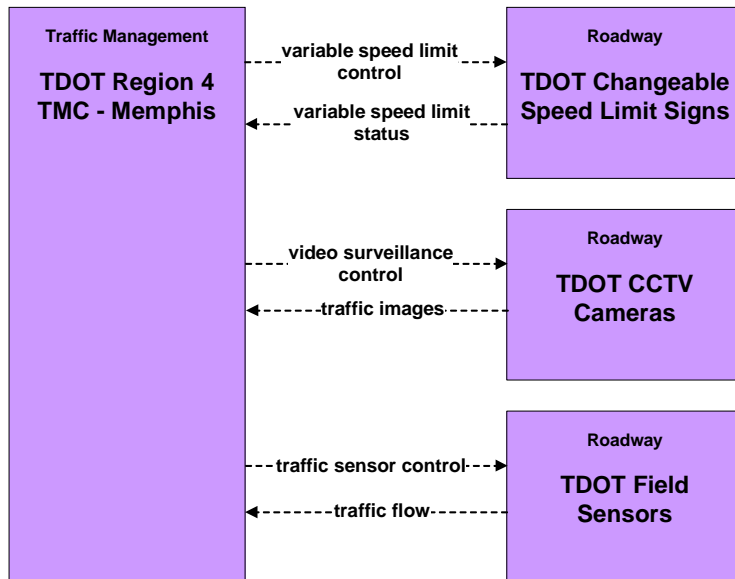

**ATMS08 – Incident Management  
City of Jackson TOC**

**ATMS13 – Standard Railroad Grade Crossing  
City of Jackson**

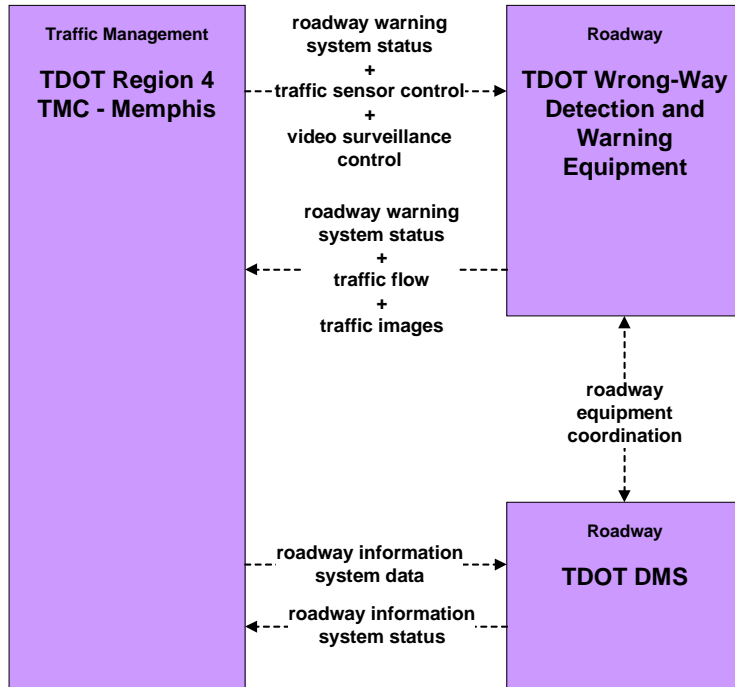

**ATMS22 – Variable Speed Limits  
TDOT Region 4 TMC - Memphis**

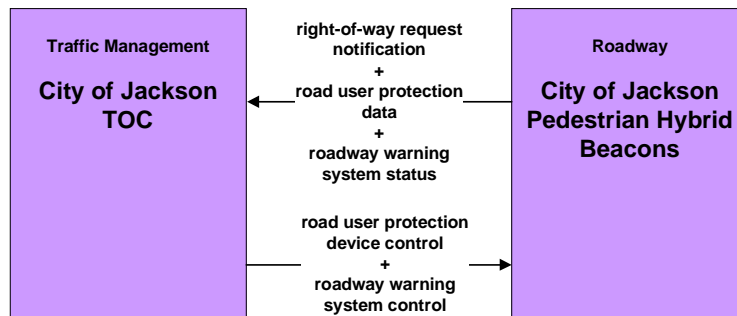

*Note:  
This service package only depicts the connections between TDOT and its existing/future field elements that are located within the Jackson Region.*

**ATMS24 – Dynamic Roadway Warning  
TDOT**

*Note:  
This service package only depicts the connections between TDOT and its existing/future field elements that are located within the Jackson Region.*

**ATMS26 – Mixed Use Warning Systems  
City of Jackson**

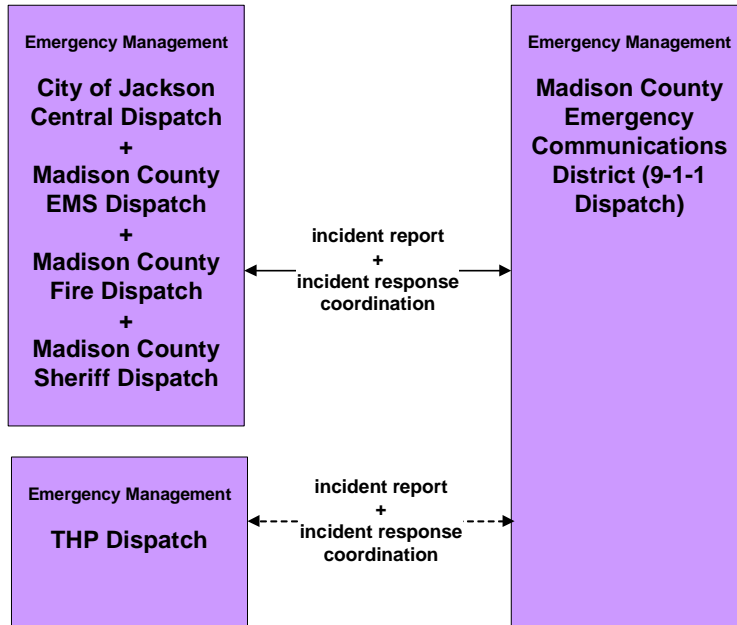

# Emergency Management

**EM01 – Emergency Call Taking and Dispatch  
Tennessee Highway Patrol**

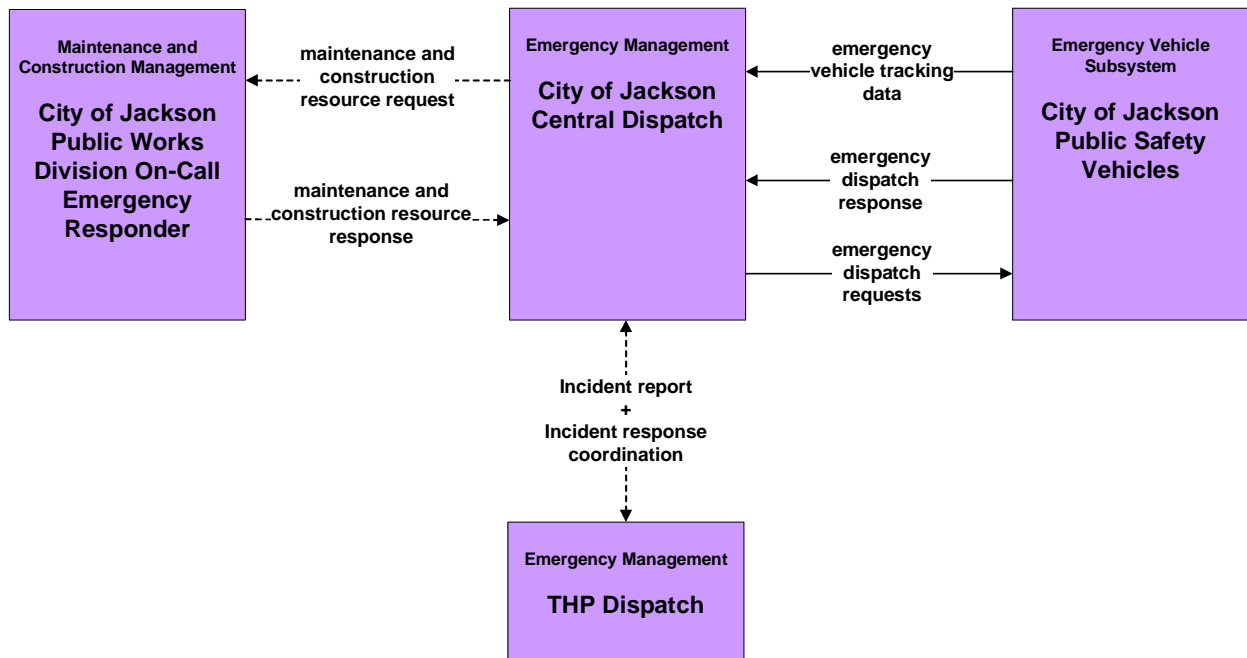

**EM01 – Emergency Call Taking and Dispatch  
Madison County Emergency Communications District (9-1-1 Dispatch)**

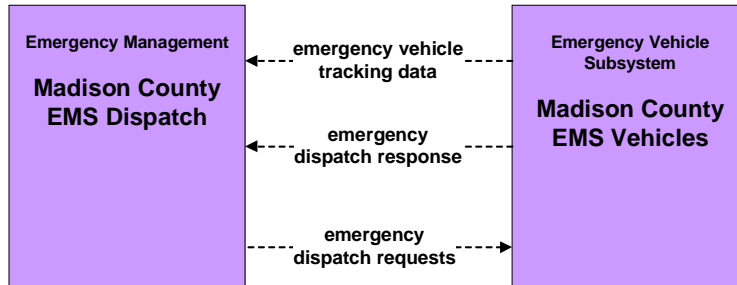

*Note:  
The Madison County Emergency Communications District (9-1-1 Dispatch) answers all 911 calls made from within the county and then forwards the call to the appropriate dispatcher.*

**EM01 – Emergency Call Taking and Dispatch  
City of Jackson Central Dispatch**

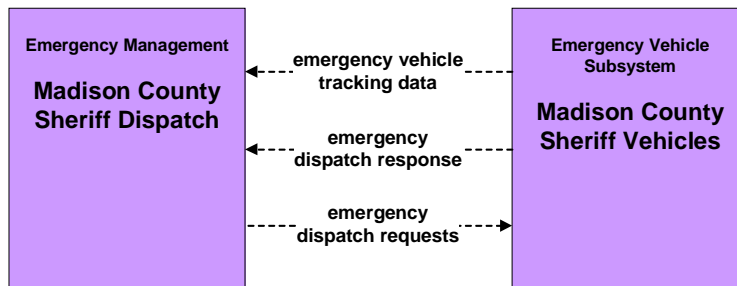

*Note:  
Public Safety Vehicles include City of Jackson Police patrol cars and well as helicopters.*

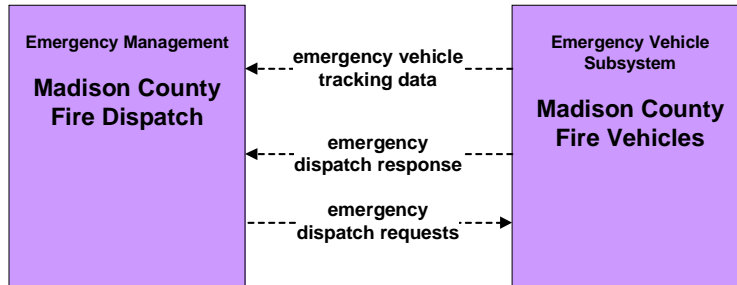

**EM01 – Emergency Call Taking and Dispatch  
Madison County EMS**

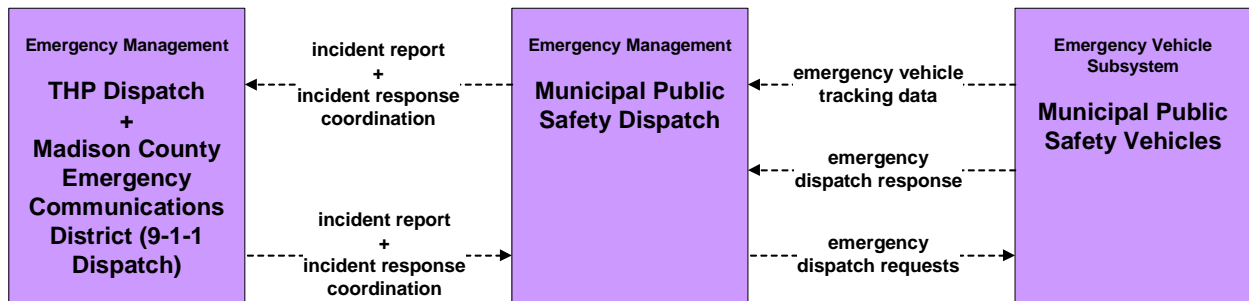

**EM01 – Emergency Call Taking and Dispatch  
Madison County Sheriff**

**EM01 – Emergency Call Taking and Dispatch  
Madison County Fire Dispatch**

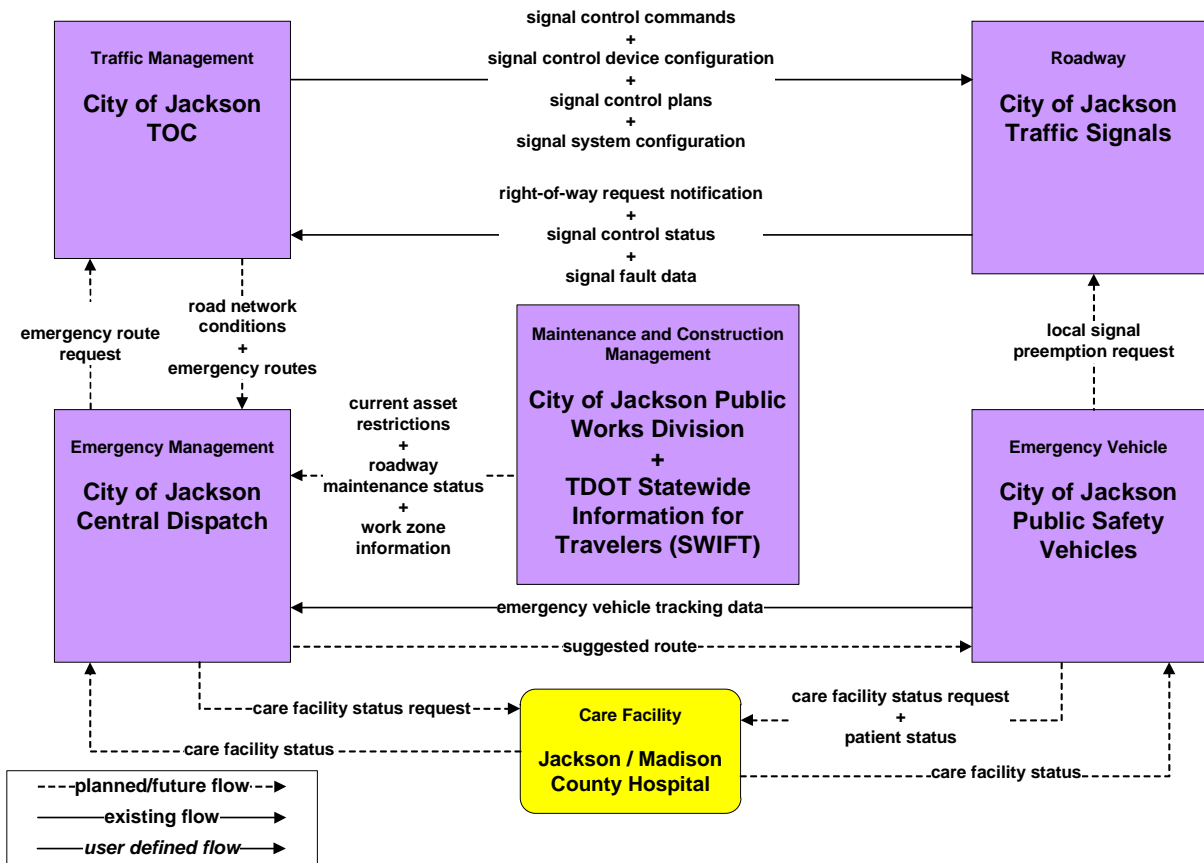

**EM01 – Emergency Call Taking and Dispatch  
Municipal Public Safety Dispatch**

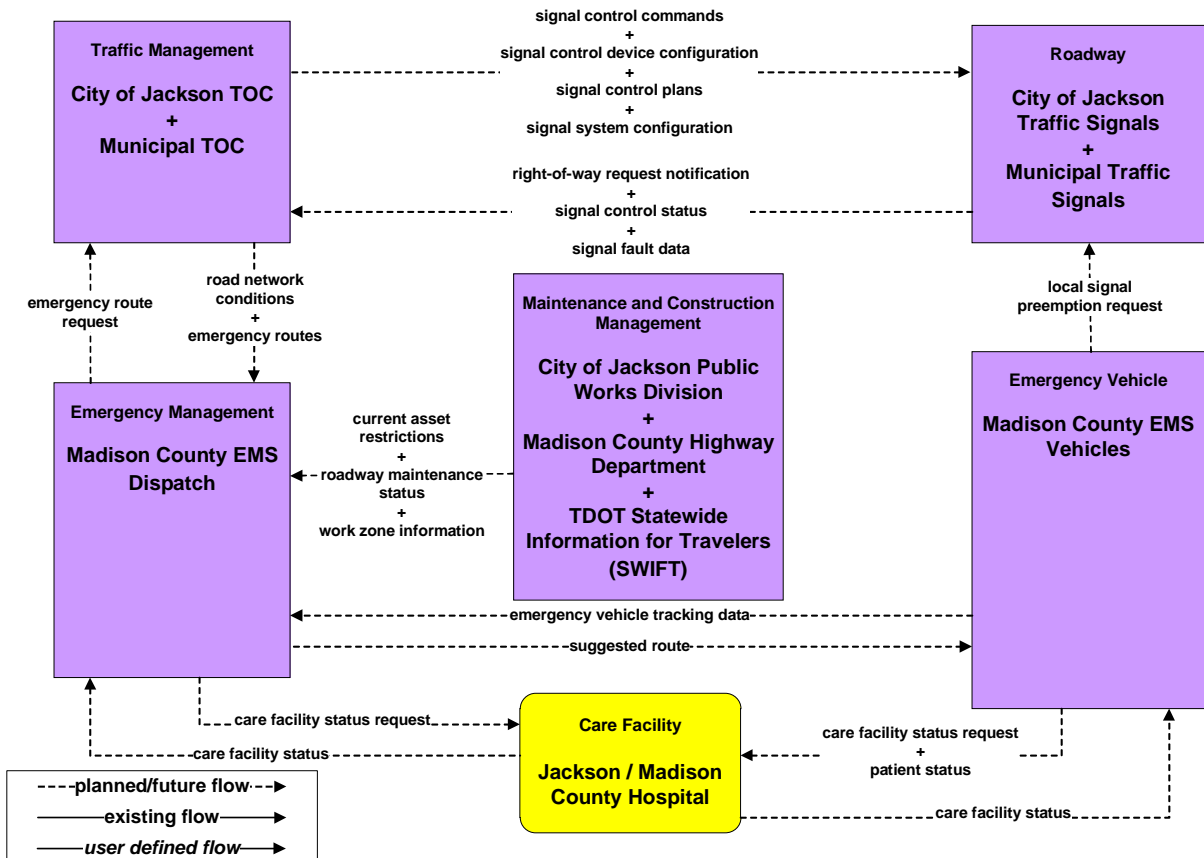

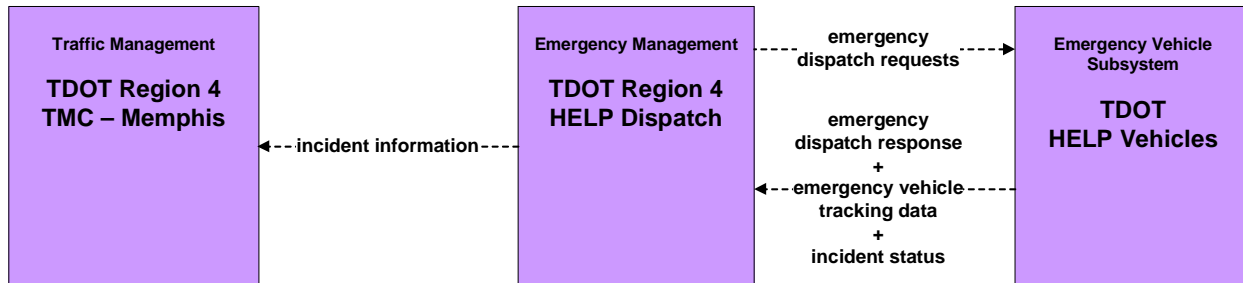

**EM02 – Emergency Routing  
City of Jackson Public Safety Department**

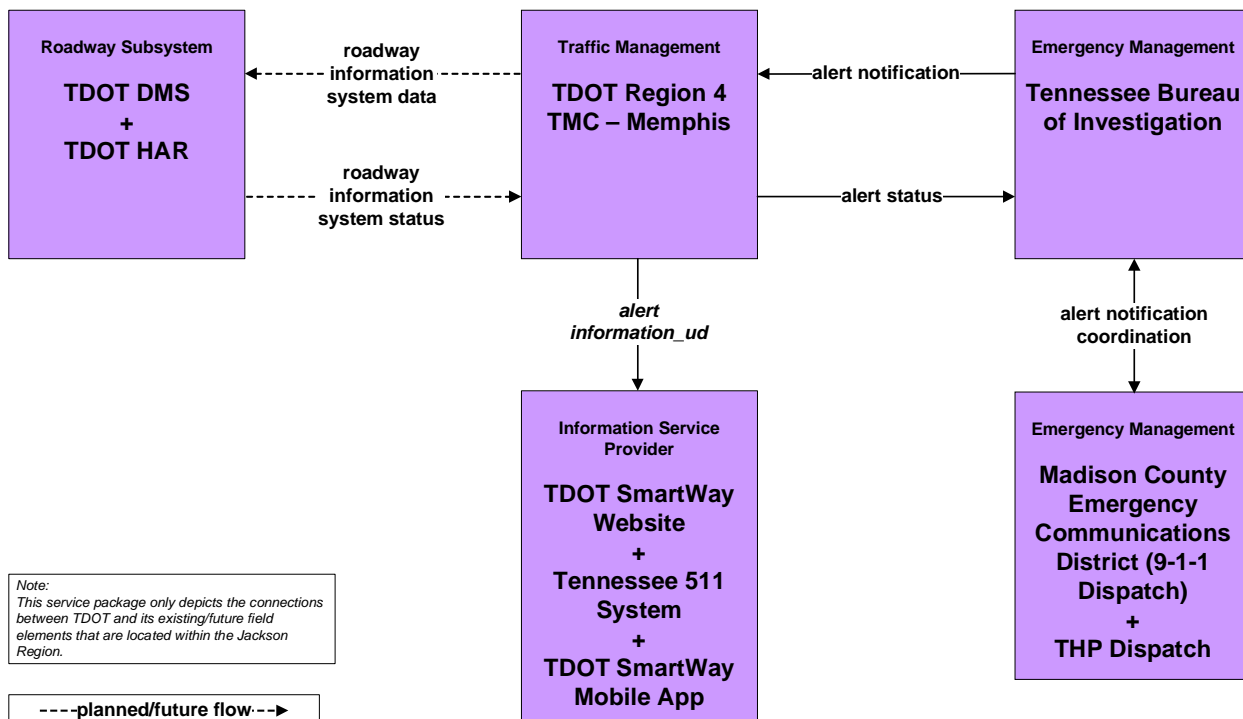

**EM02 – Emergency Routing  
Madison County EMS**

**EM04 – Roadway Service Patrols  
HELP**

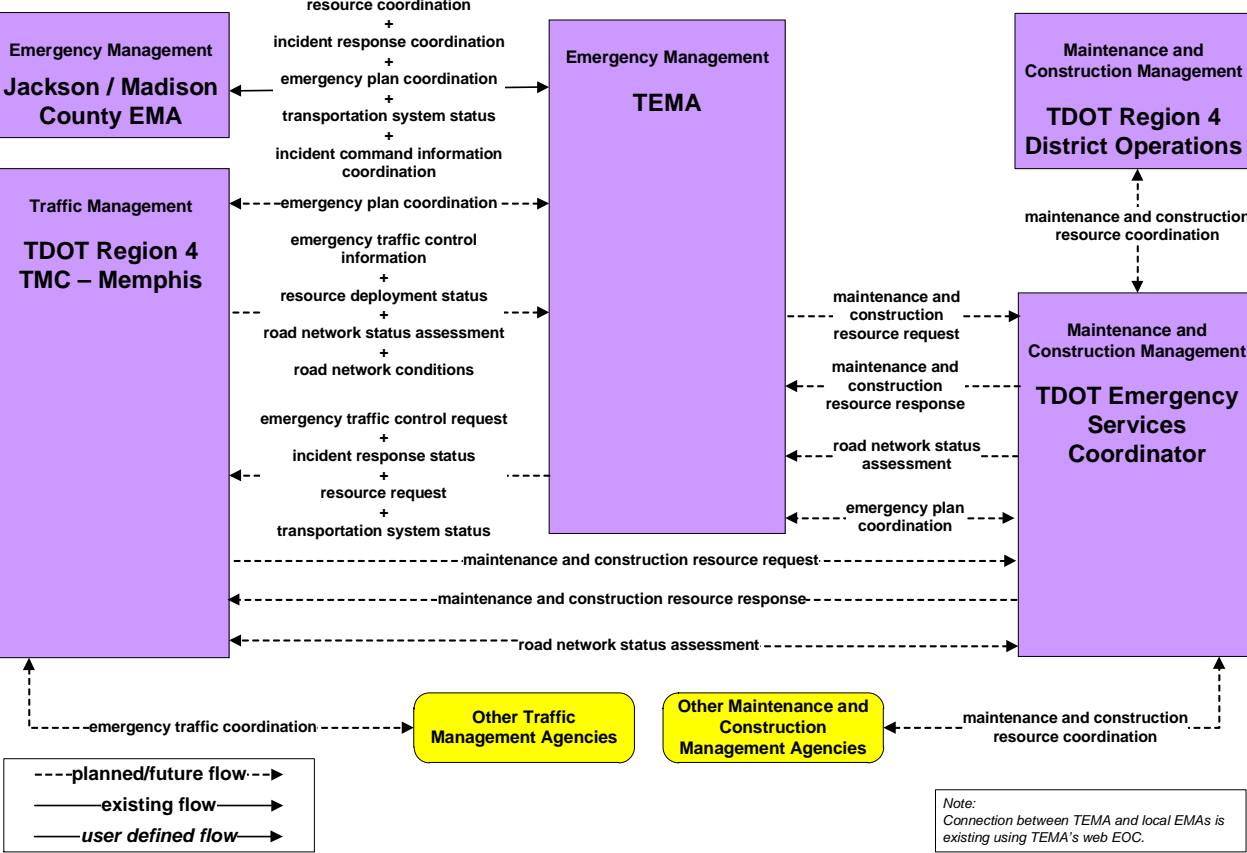

**EM06 – Wide-Area Alerts  
Tennessee AMBER Alert**

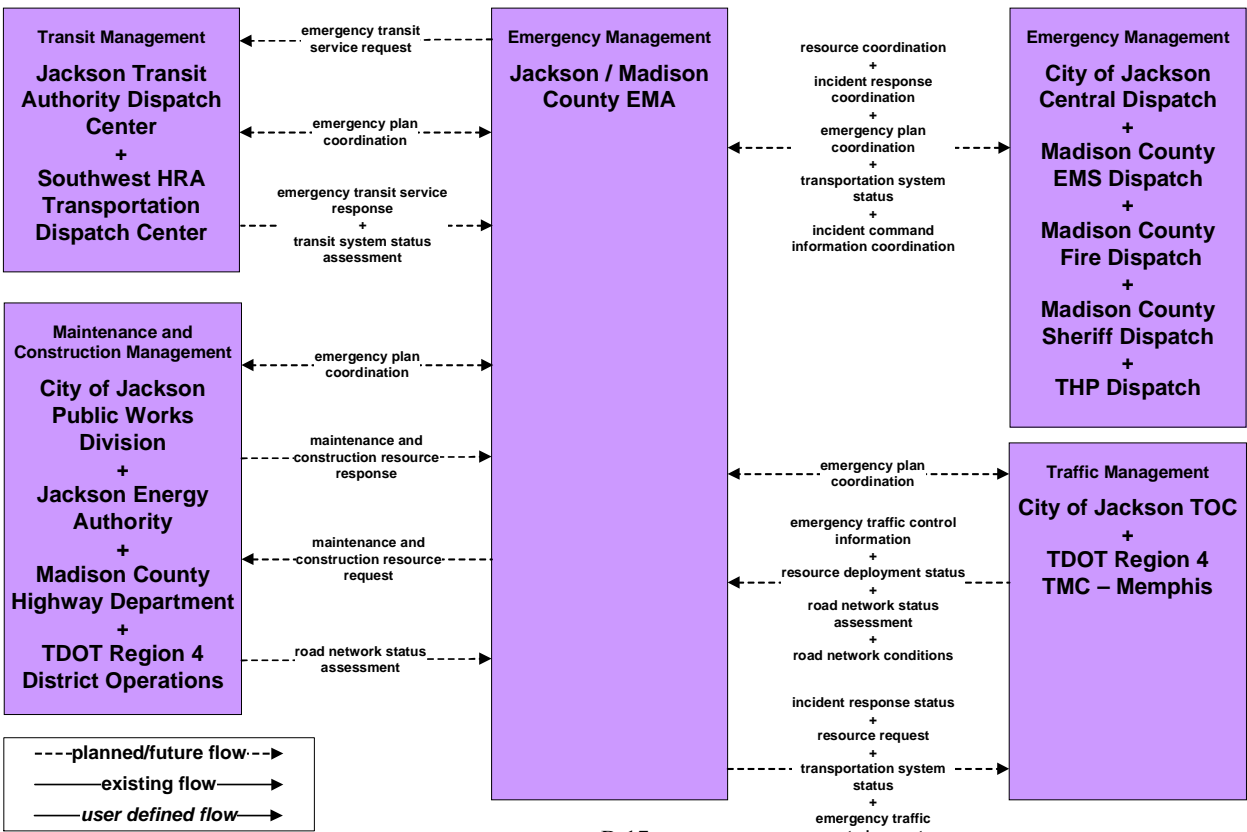

*Note:*  
This service package only depicts the connections between TDOT and its existing/future field elements that are located within the Jackson Region.

**EM08 – Disaster Response and Recovery  
TEMA**

**EM08 – Disaster Response and Recovery  
Jackson / Madison County EMA**

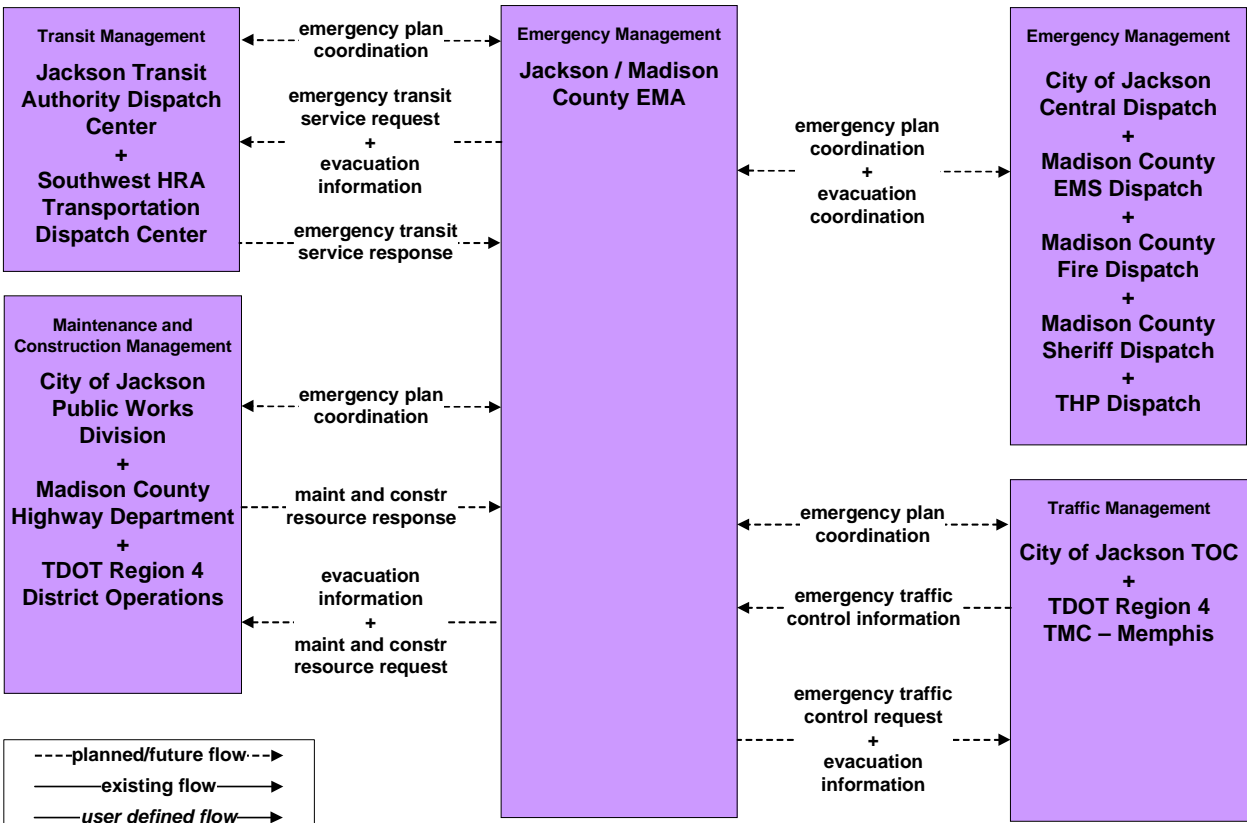

**EM09 – Evacuation and Reentry Management  
TEMA**

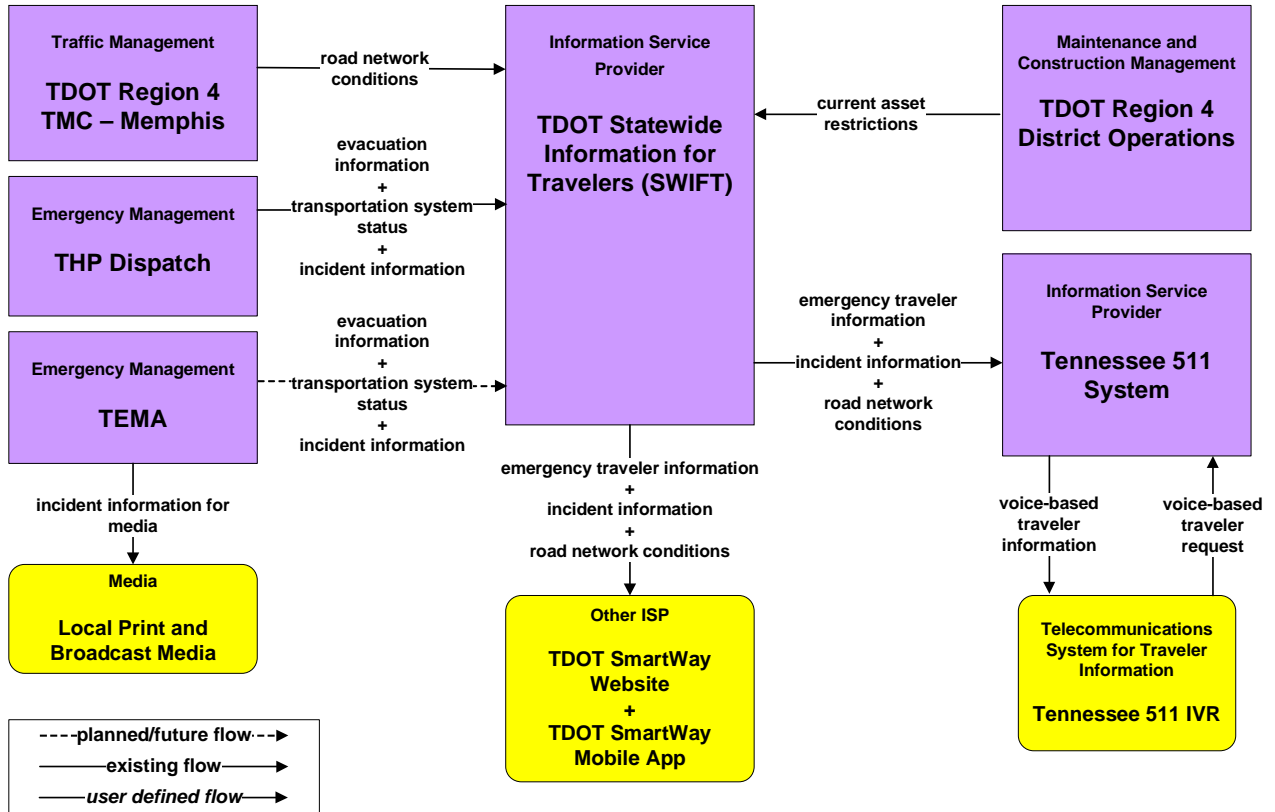

*Note:*  
Connection between TEMA and local EMAs is existing using TEMA's web EOC.

**EM09 – Evacuation and Reentry Management  
Jackson / Madison County EMA**

**EM10 – Disaster Traveler Information  
Tennessee 511 and SWIFT**

# Maintenance and Construction Management

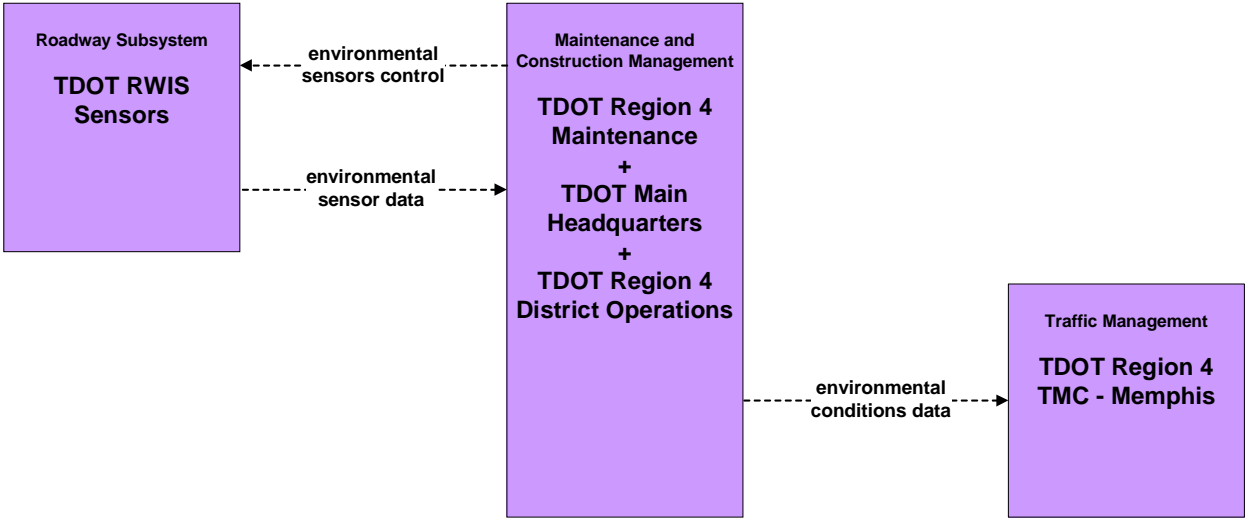

**MC01 – Maintenance and Construction Vehicle Tracking  
TDOT Region 4 District Operations**

**MC01 – Maintenance and Construction Vehicle Tracking  
City of Jackson**

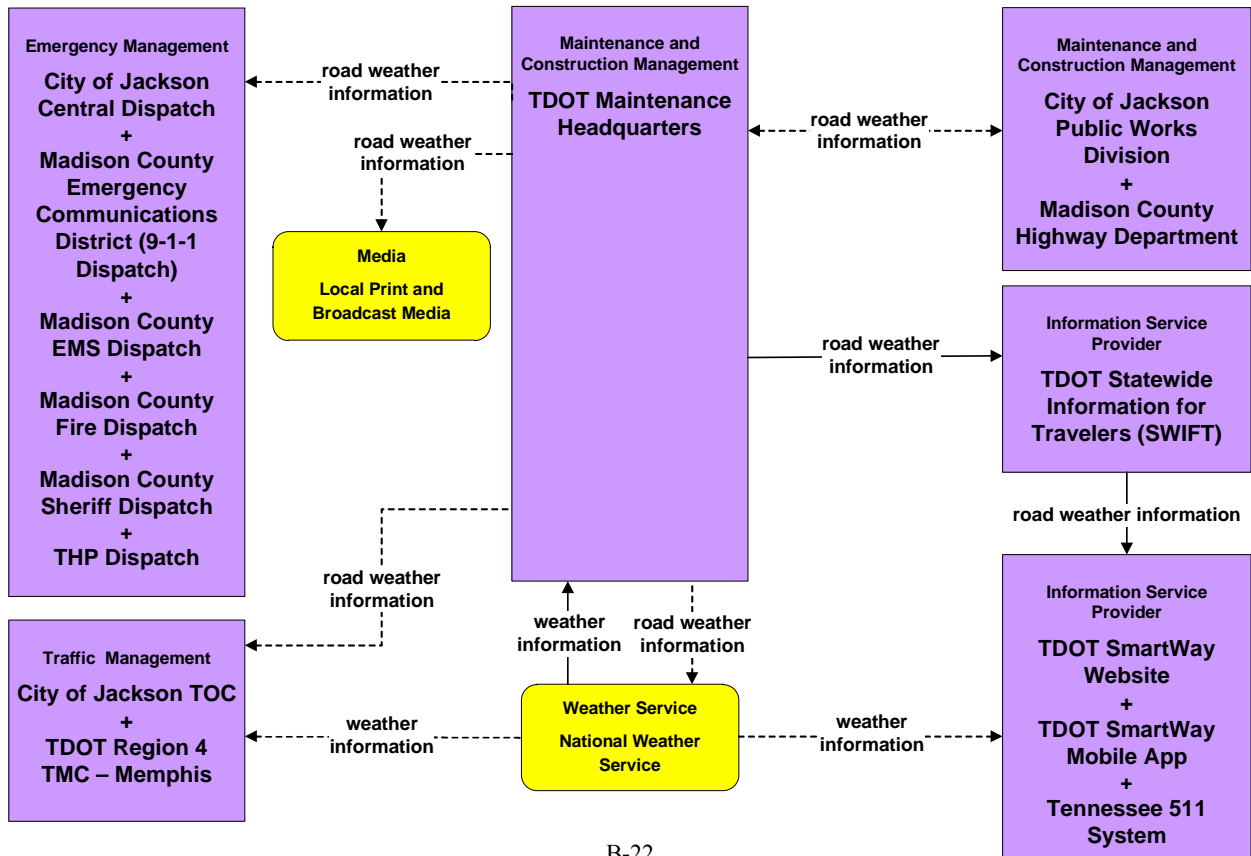

**MC03 – Road Weather Data Collection  
TDOT RWIS**

**MC03 – Road Weather Data Collection  
City of Jackson RWIS**

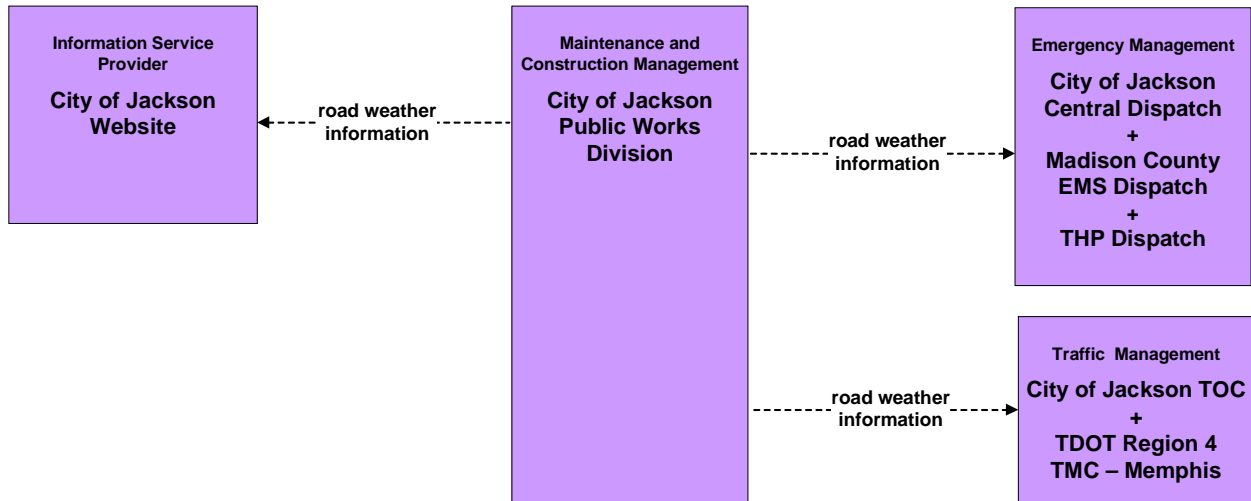

**MC04 – Weather Information Processing and Distribution  
TDOT Region 4 District Operations**

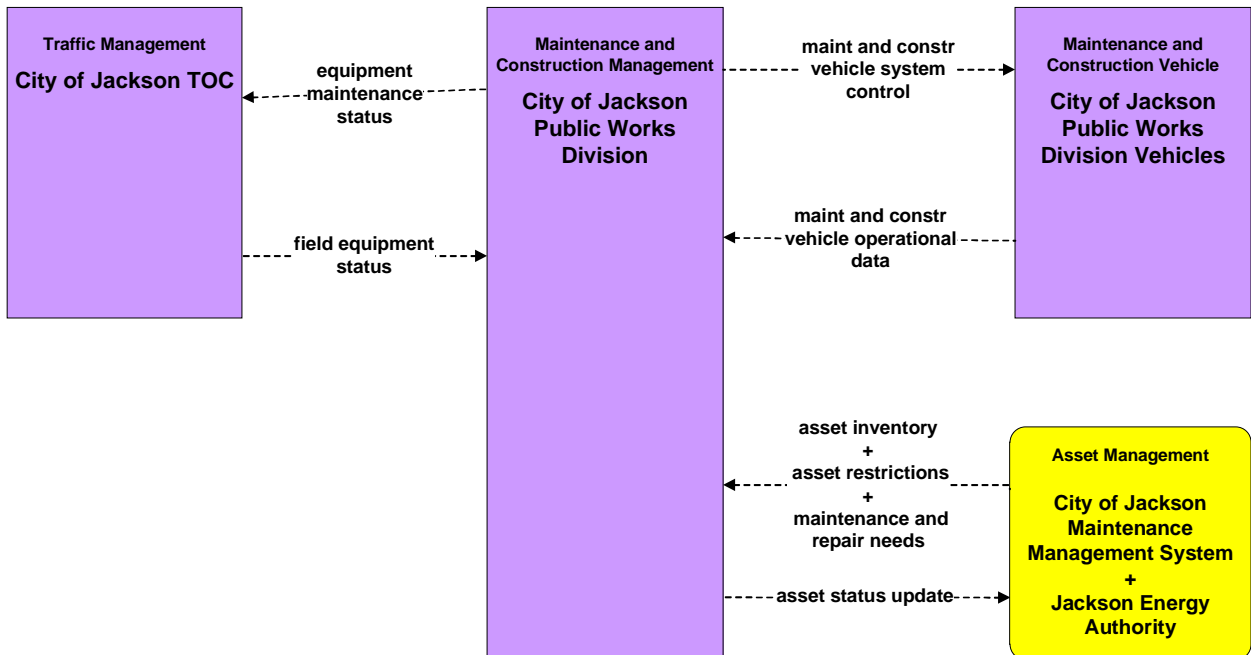

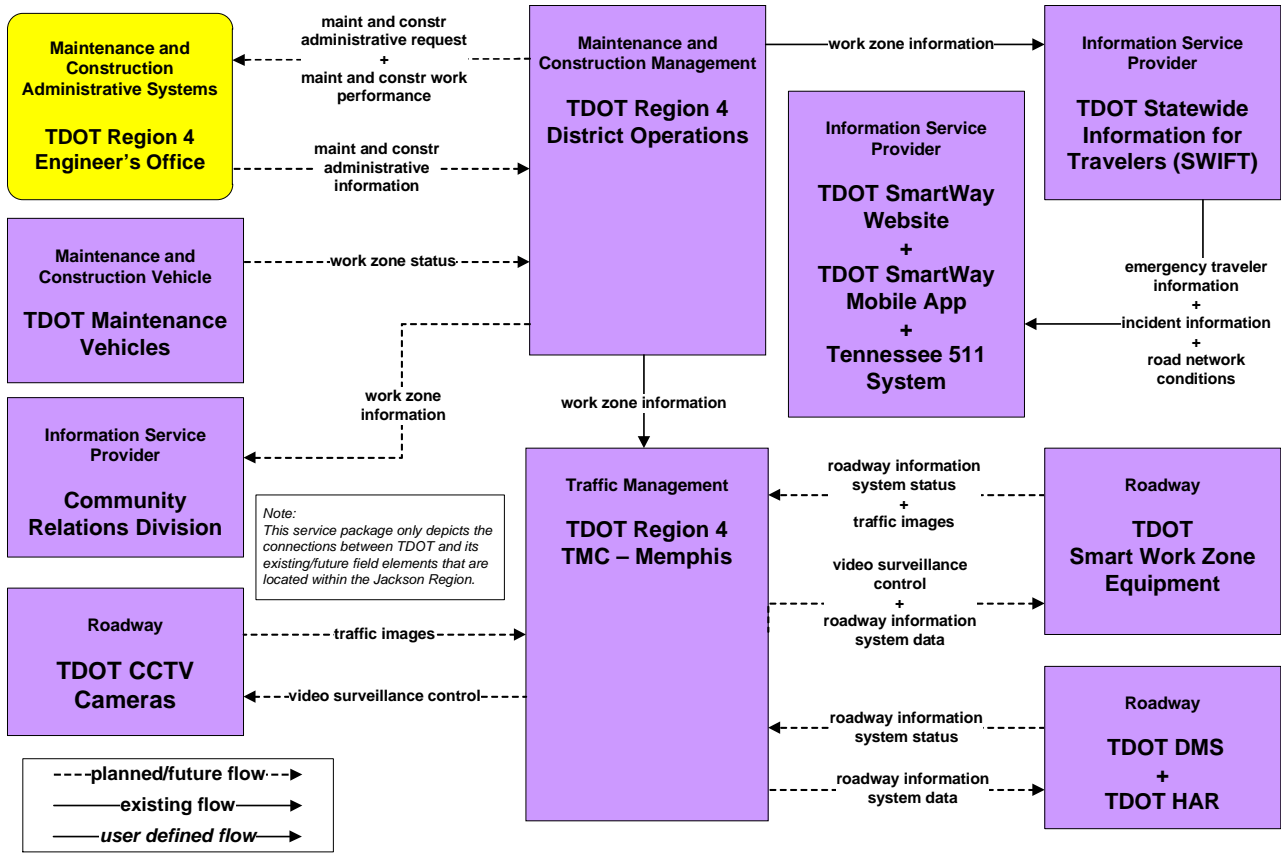

**MC04 – Weather Information Processing and Distribution  
City of Jackson**

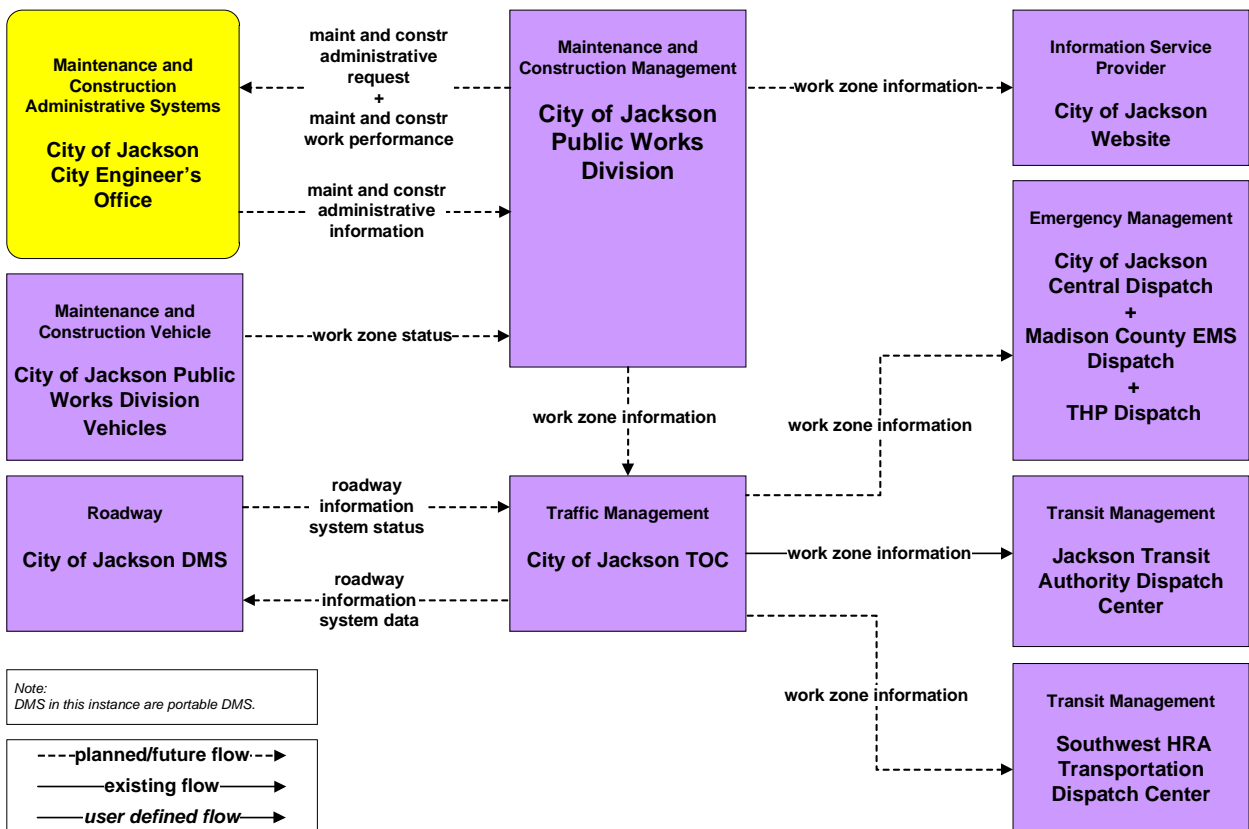

**MC07 – Roadway Maintenance and Construction**

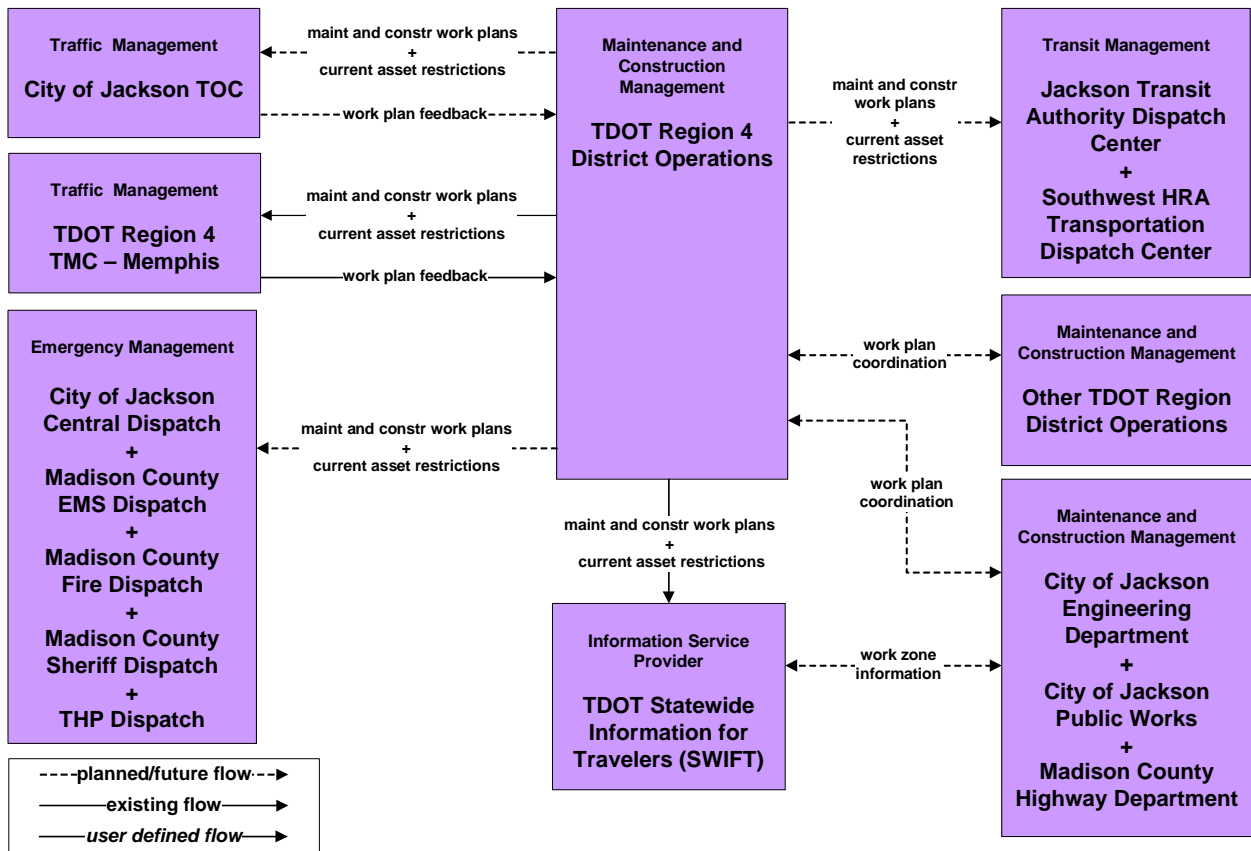

**MC08 – Work Management  
TDOT Region 4 District Operations**

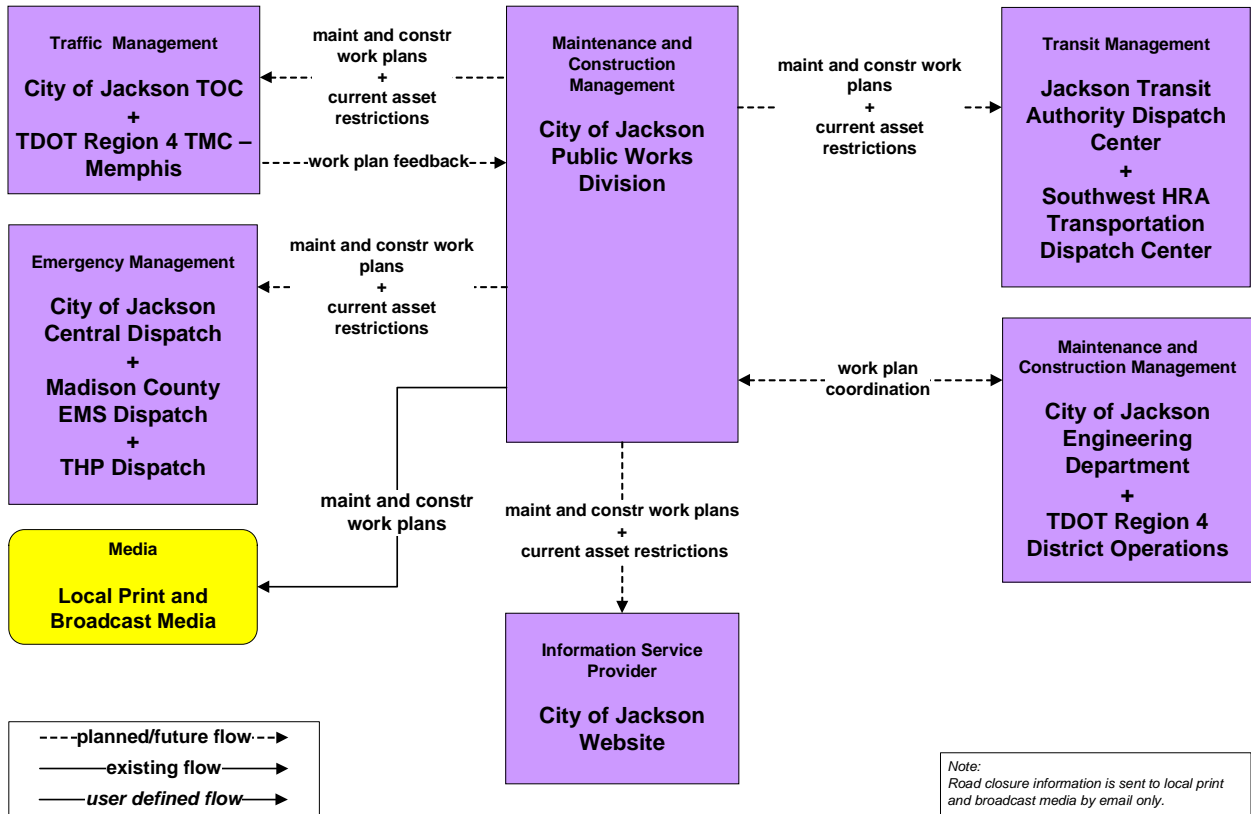

**MC08 – Workzone Management  
City of Jackson**

**MC10 – Maintenance and Construction Activity Coordination  
TDOT Region 4 District Operations**

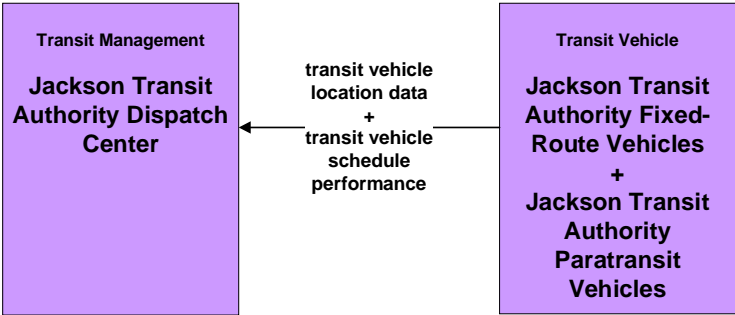

**MC10 – Maintenance and Construction Activity Coordination  
City of Jackson**

# Advanced Public Transportation System

**APTS01 – Transit Vehicle Tracking  
Jackson Transit Authority**

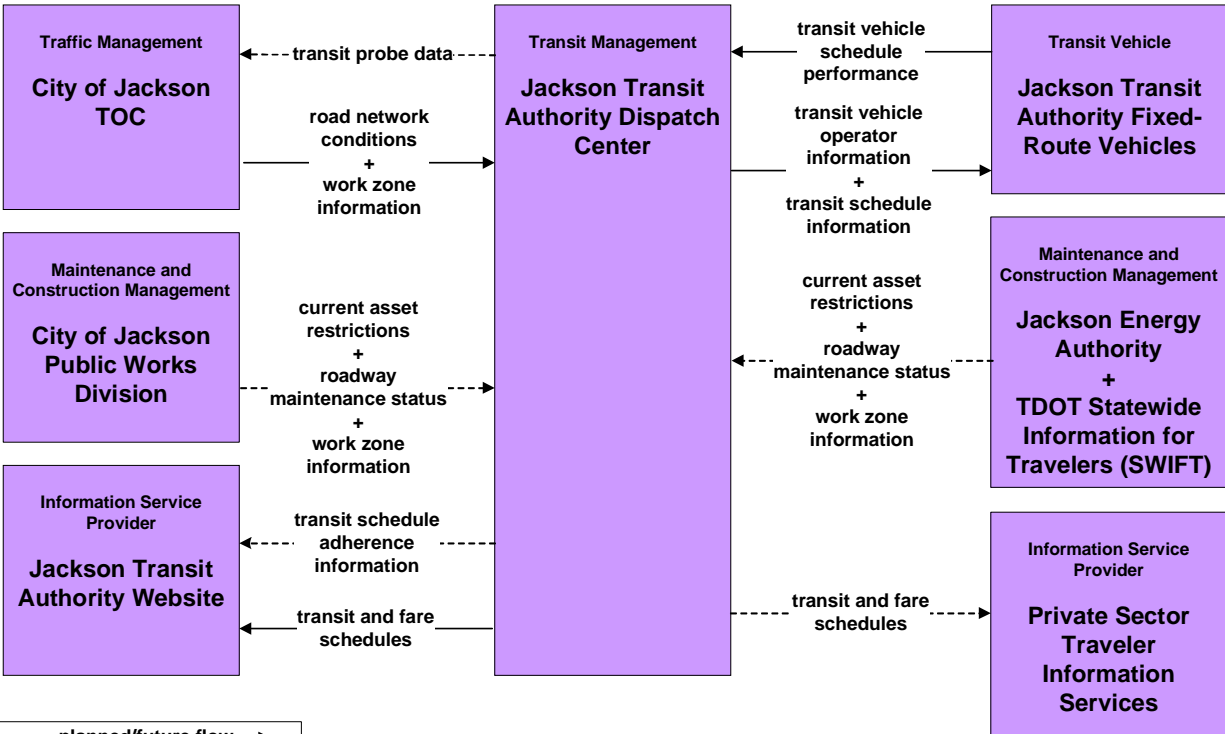

**APTS01 – Transit Vehicle Tracking  
Southwest HRA Transportation**

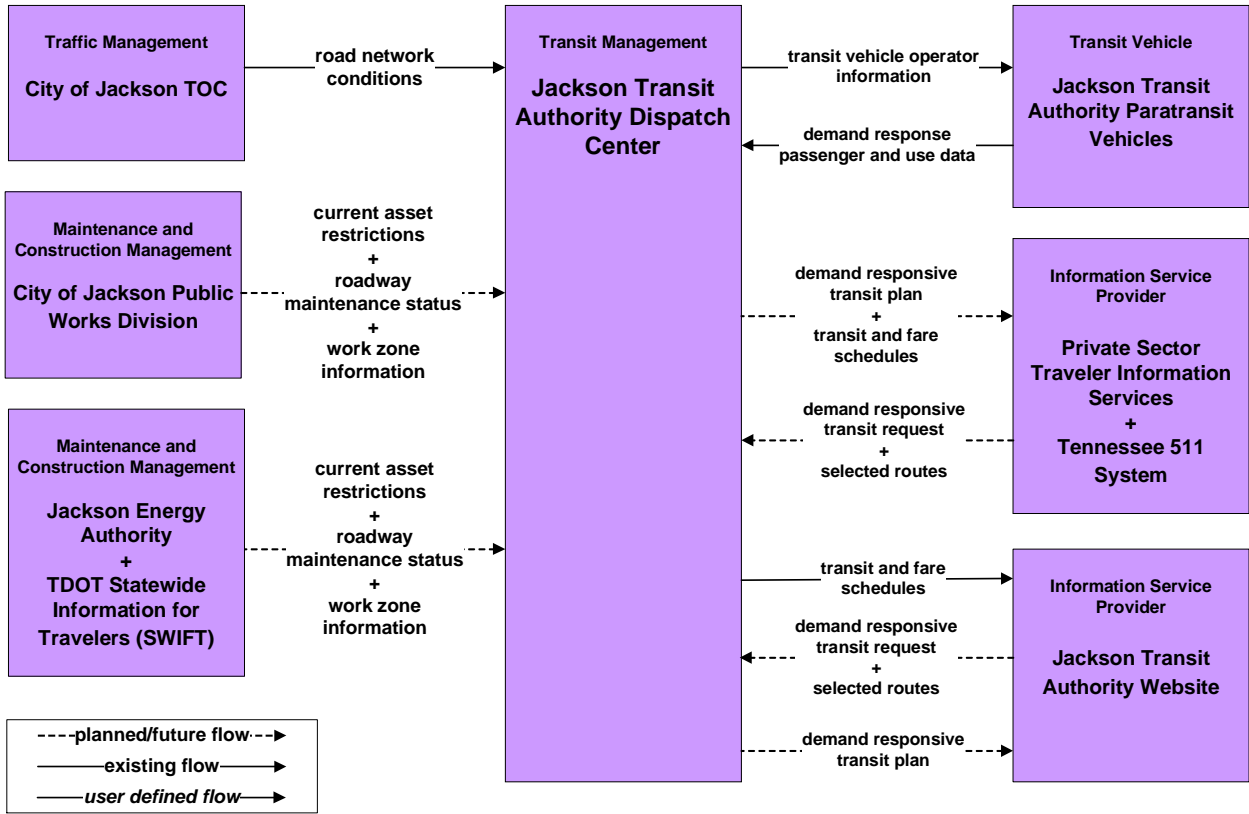

*Note:*  
 Southwest HRA has dispatch centers in each of the 8 counties in their service area. In the future these will be combined to form a centralized dispatch in Henderson.

**APTS02 – Transit Fixed-Route Operations  
Jackson Transit Authority**

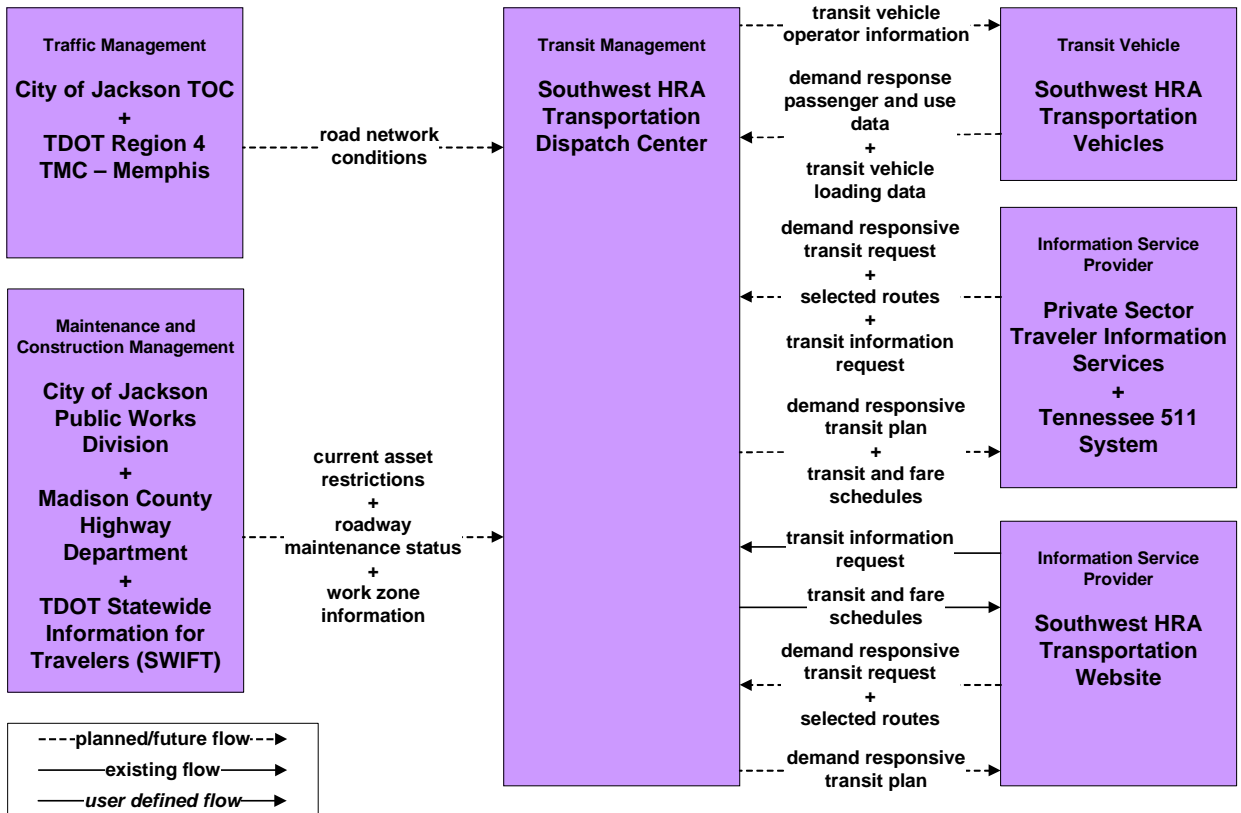

*Note:*  
 Information from the City of Jackson is sent by email.

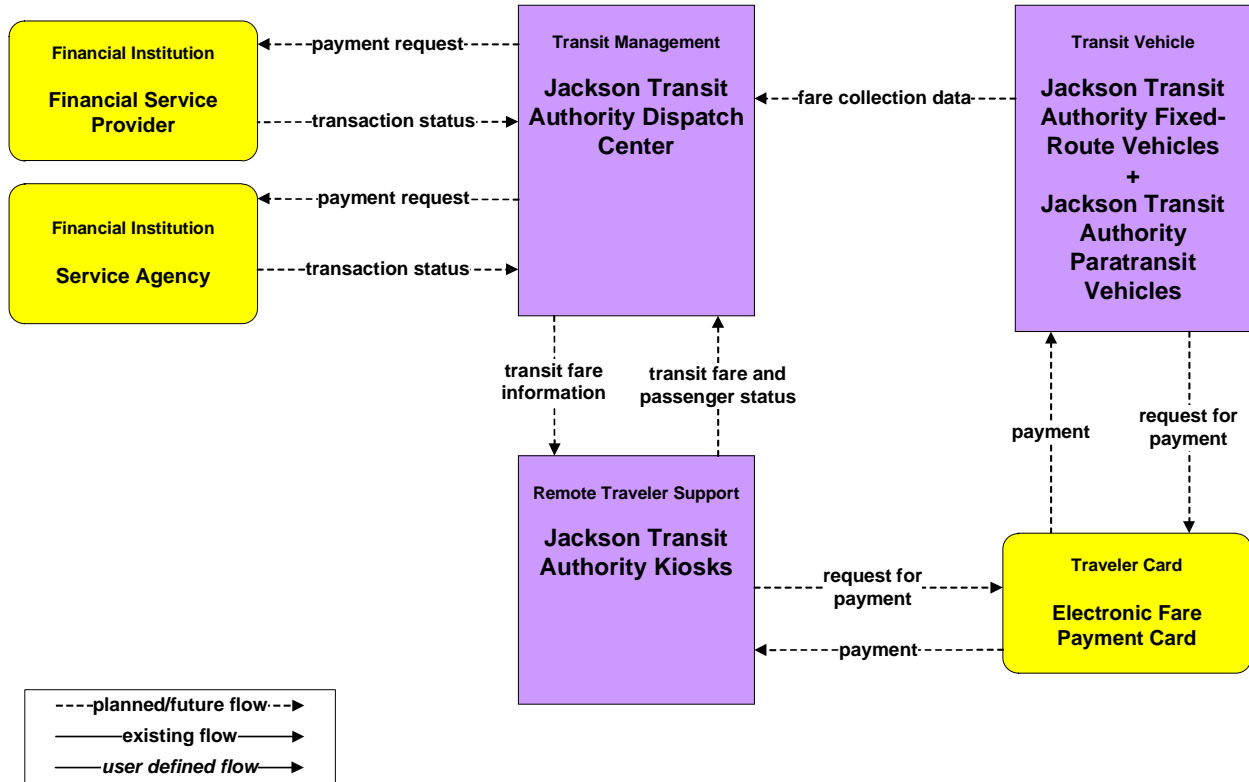

**APTS03 – Demand Response Transit Operations  
Jackson Transit Authority**

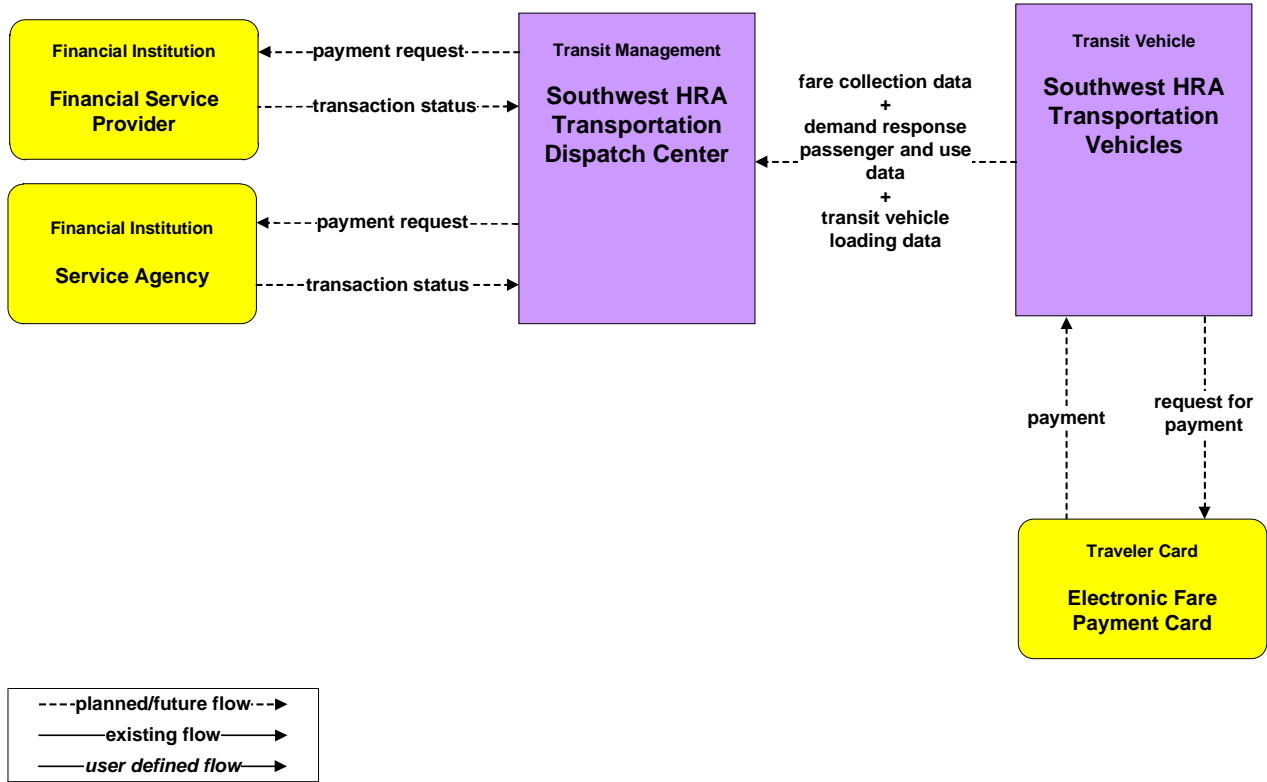

**APTS03 – Demand Response Transit Operations  
Southwest HRA Transportation**

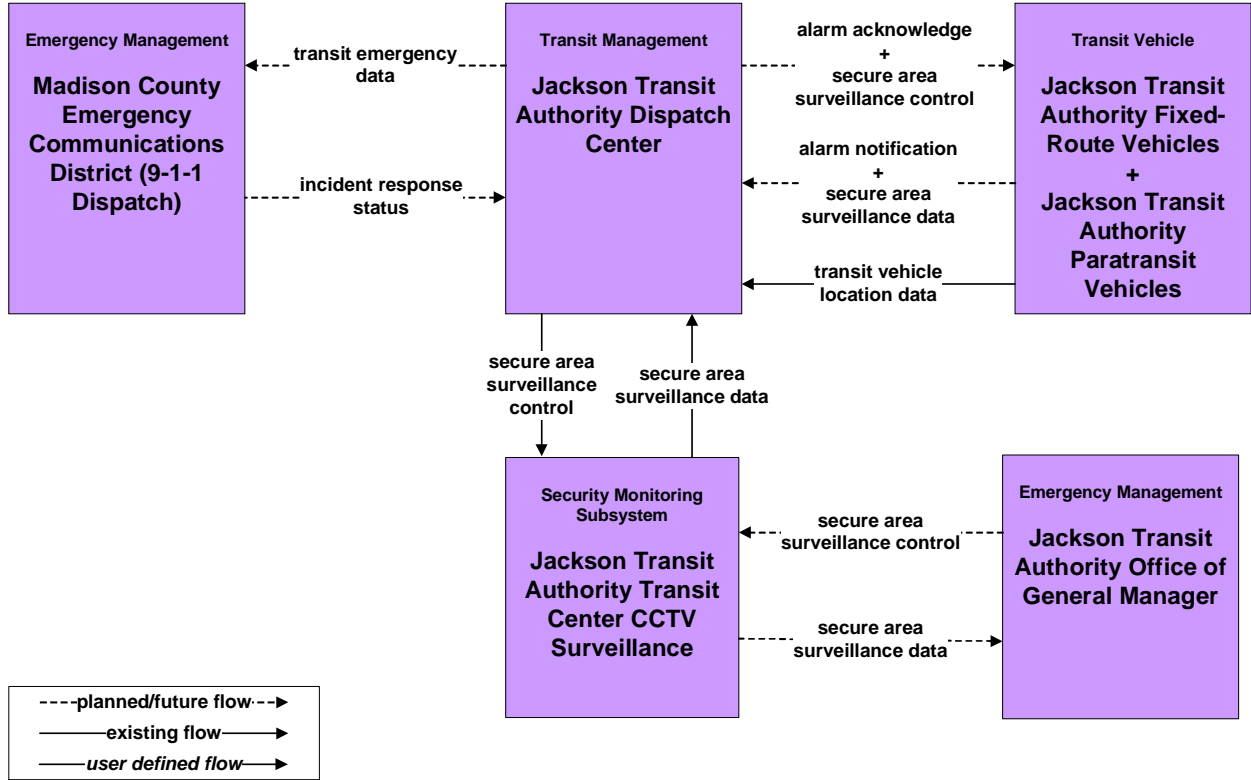

**APTS04 – Transit Fare Collection Management  
Jackson Transit Authority**

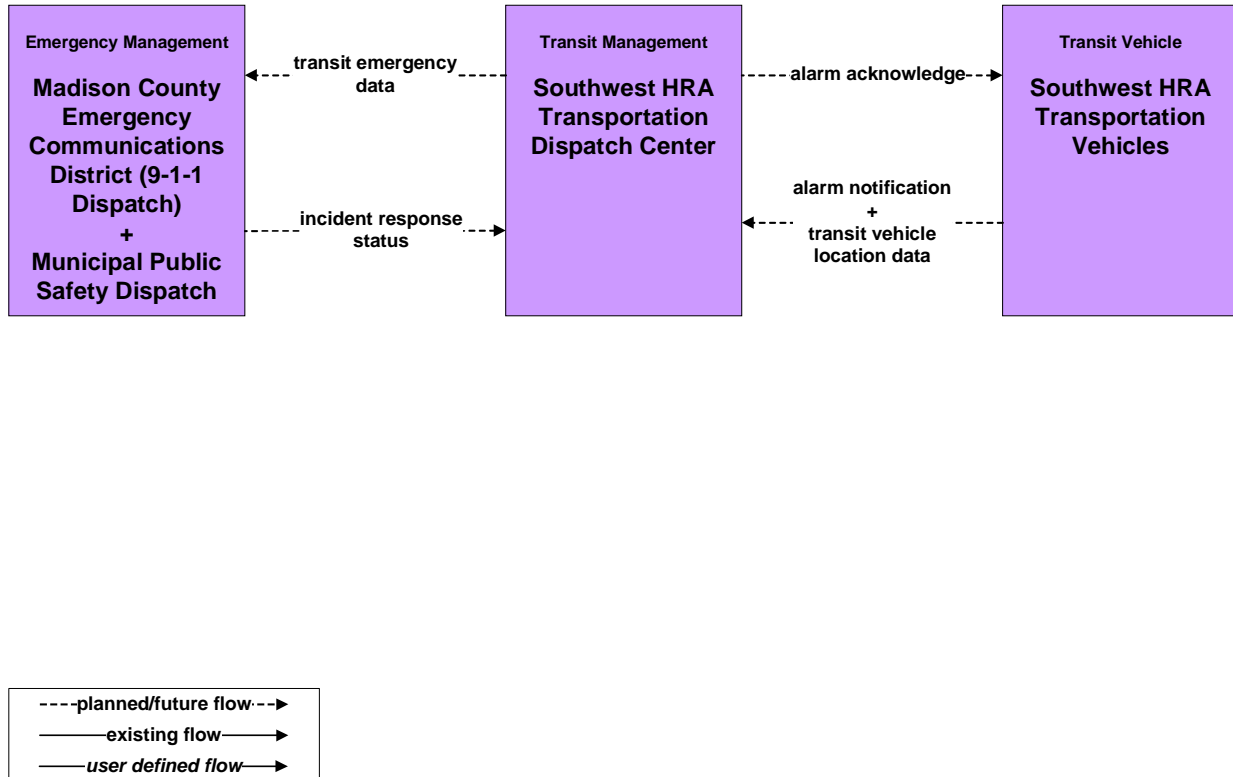

**APTS04 – Transit Fare Collection Management  
Southwest HRA Transportation**

**APTS05 – Transit Security  
Jackson Transit Authority Dispatch**

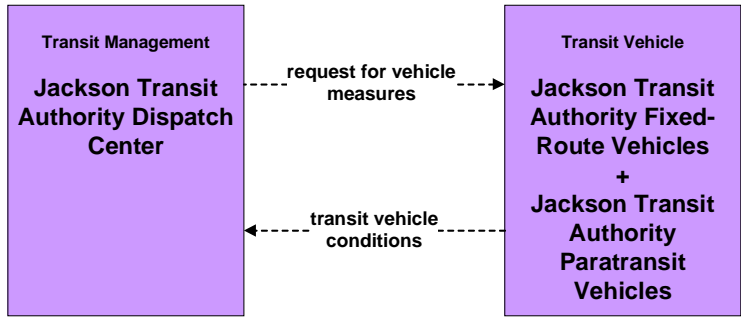

**APTS05 – Transit Security  
Southwest HRA Transportation**

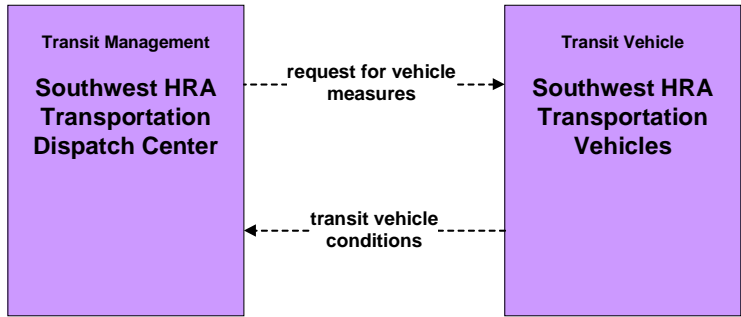

**APTS06 – Transit Fleet Maintenance  
Jackson Transit Authority**

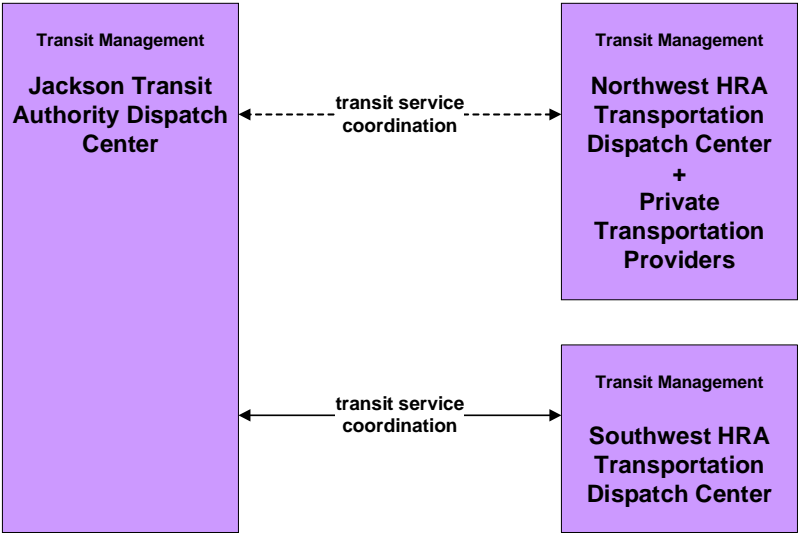

*Note:*  
Transit maintenance data will be collected at the maintenance garage at the end of the day rather than real-time.

**APTS06 – Transit Fleet Maintenance  
Southwest HRA Transportation**

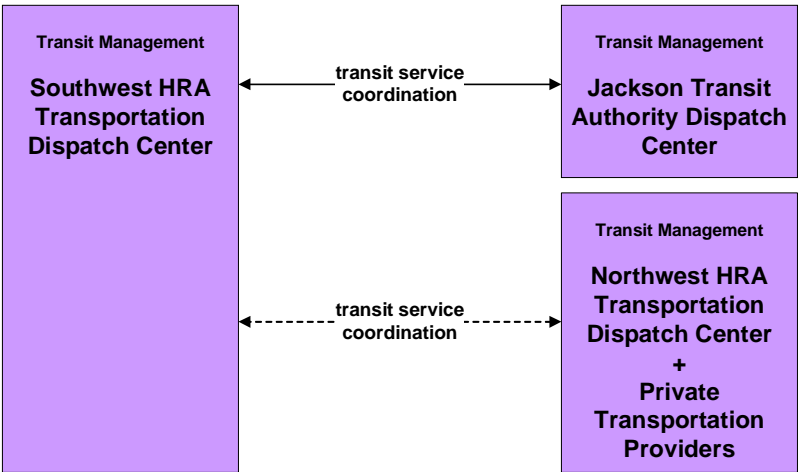

*Note:*  
Transit maintenance data will be collected at the maintenance garage at the end of the day rather than real-time.

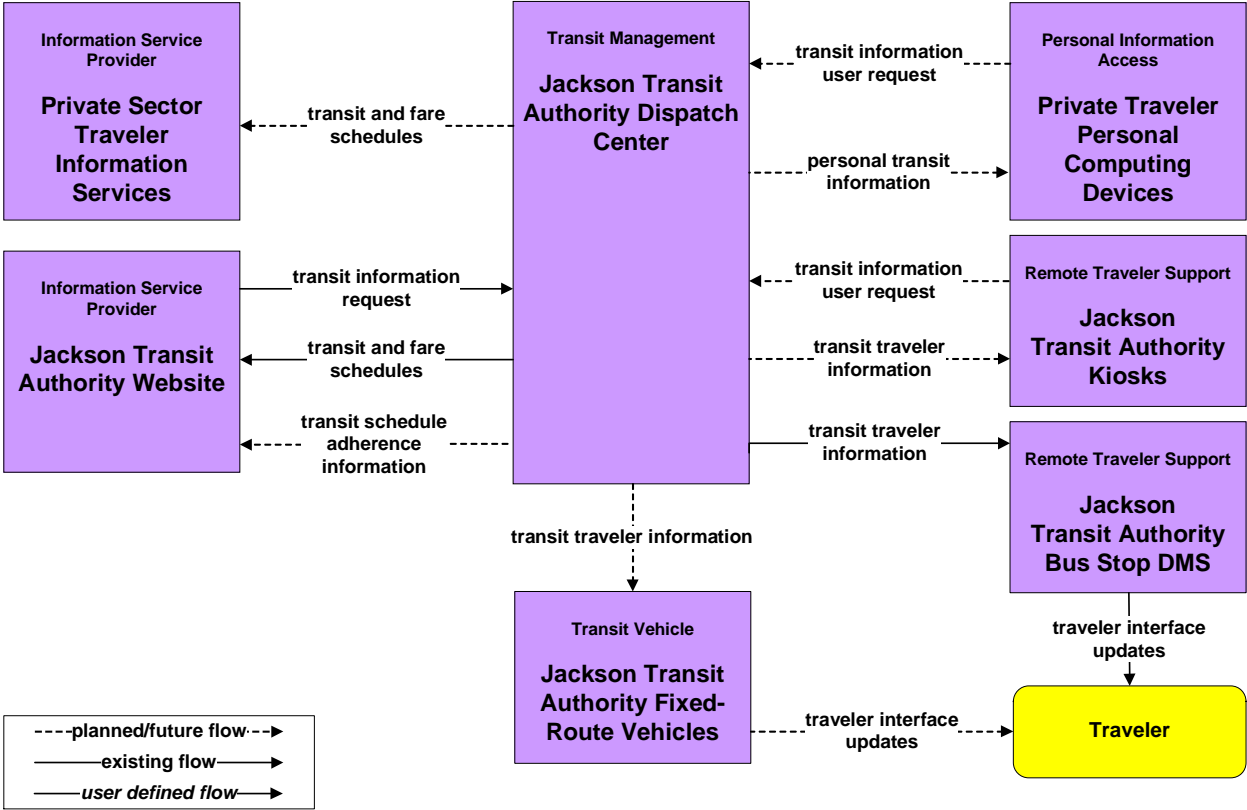

**APTS07 – Multi-modal Coordination  
Jackson Transit Authority**

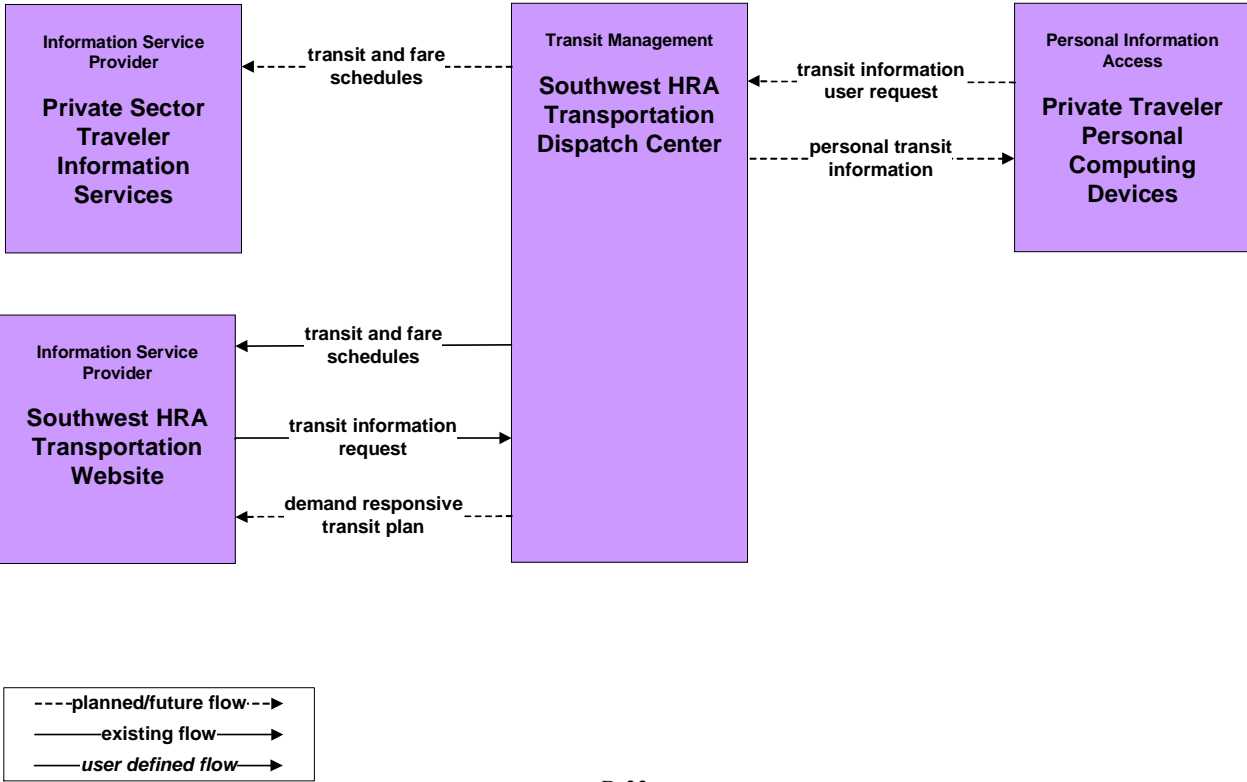

**APTS07 – Multi-modal Coordination  
Southwest HRA Transportation**

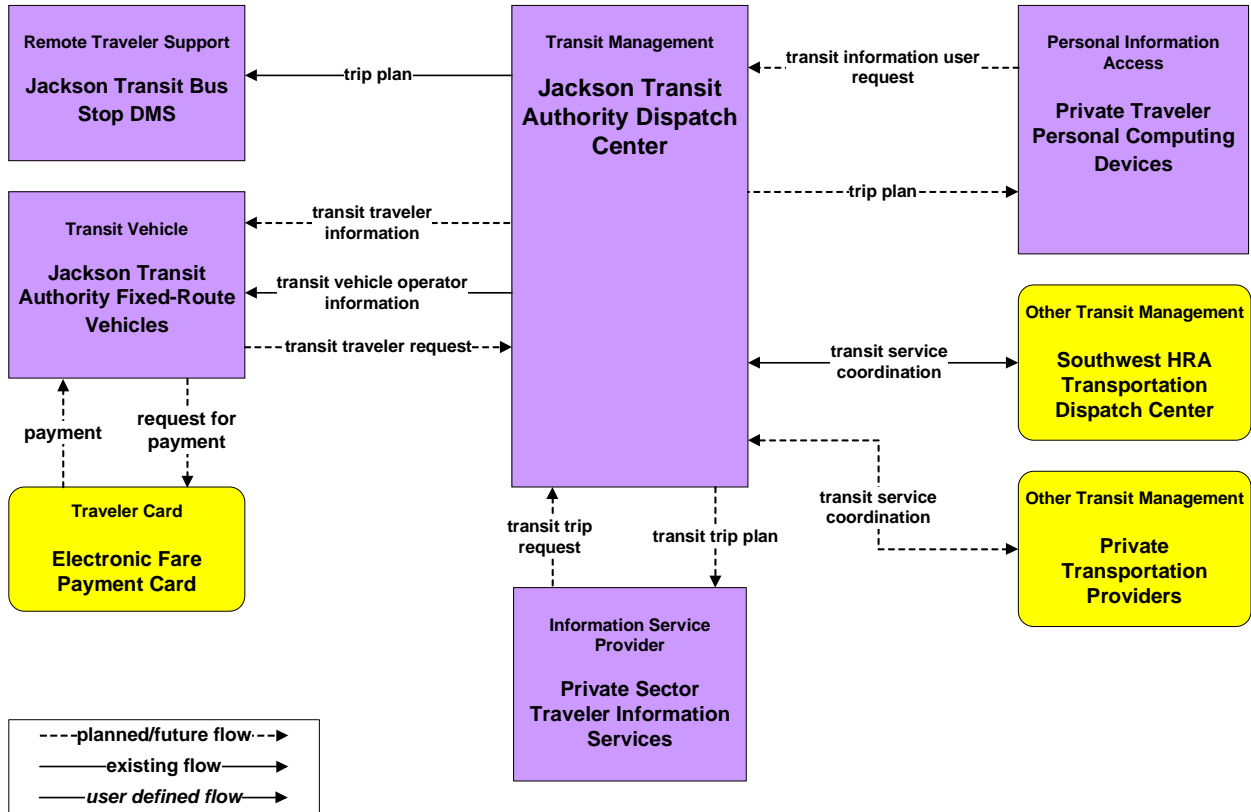

**APTS08 – Transit Traveler Information  
Jackson Transit Authority**

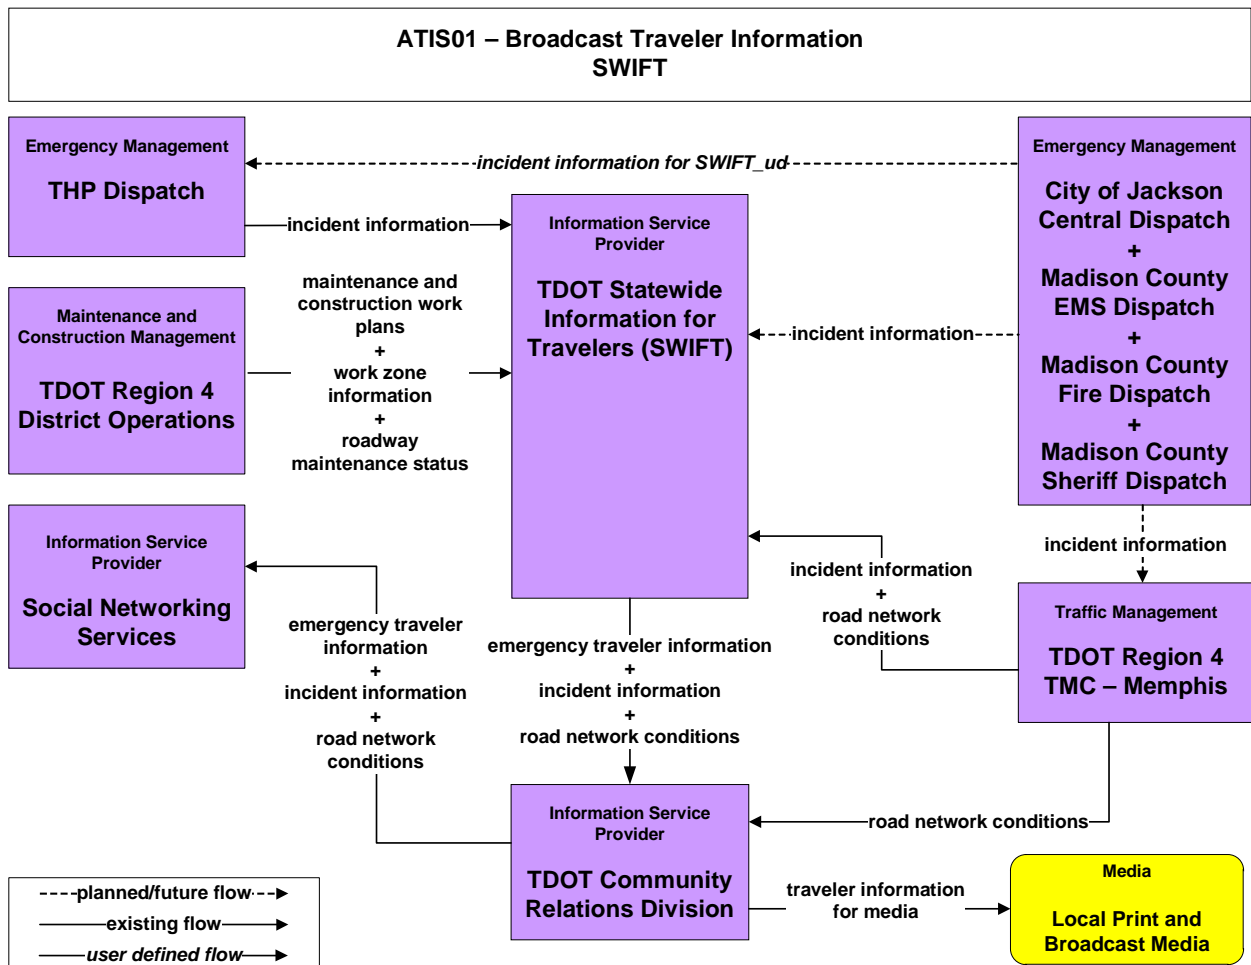

**APTS08 – Transit Traveler Information  
Southwest HRA Transportation**

**APTS11 – Multimodal Connection Protection  
Jackson Transit**

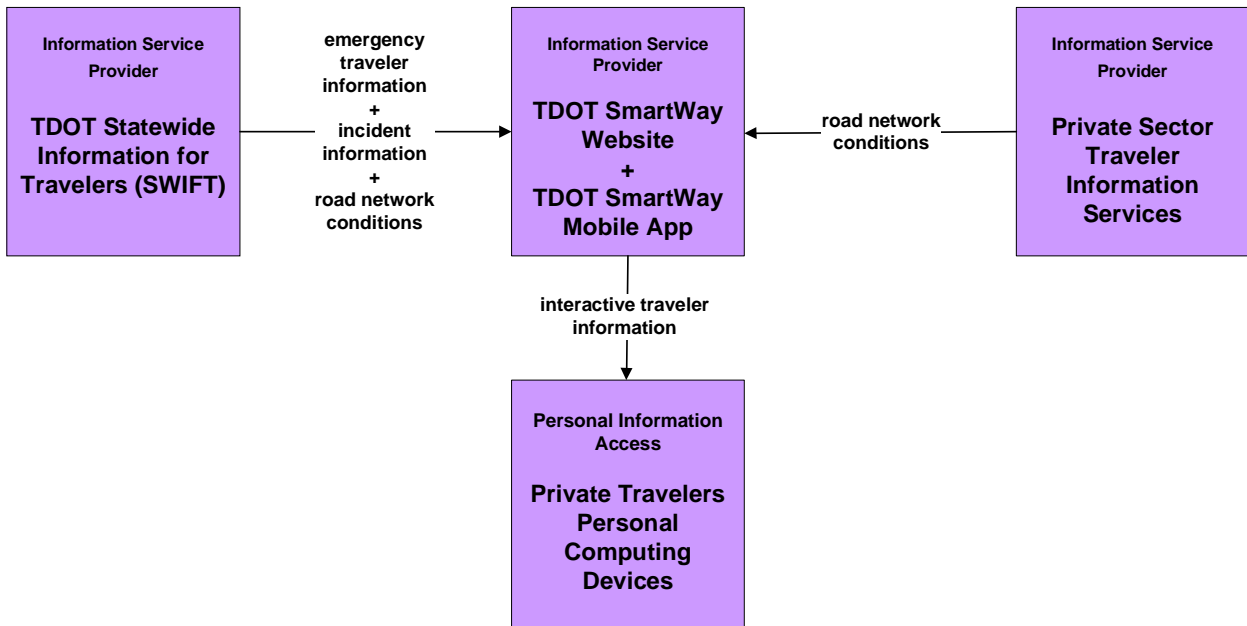

# Advanced Traveler Information System

**ATIS01 – Broadcast Traveler Information  
City of Jackson**

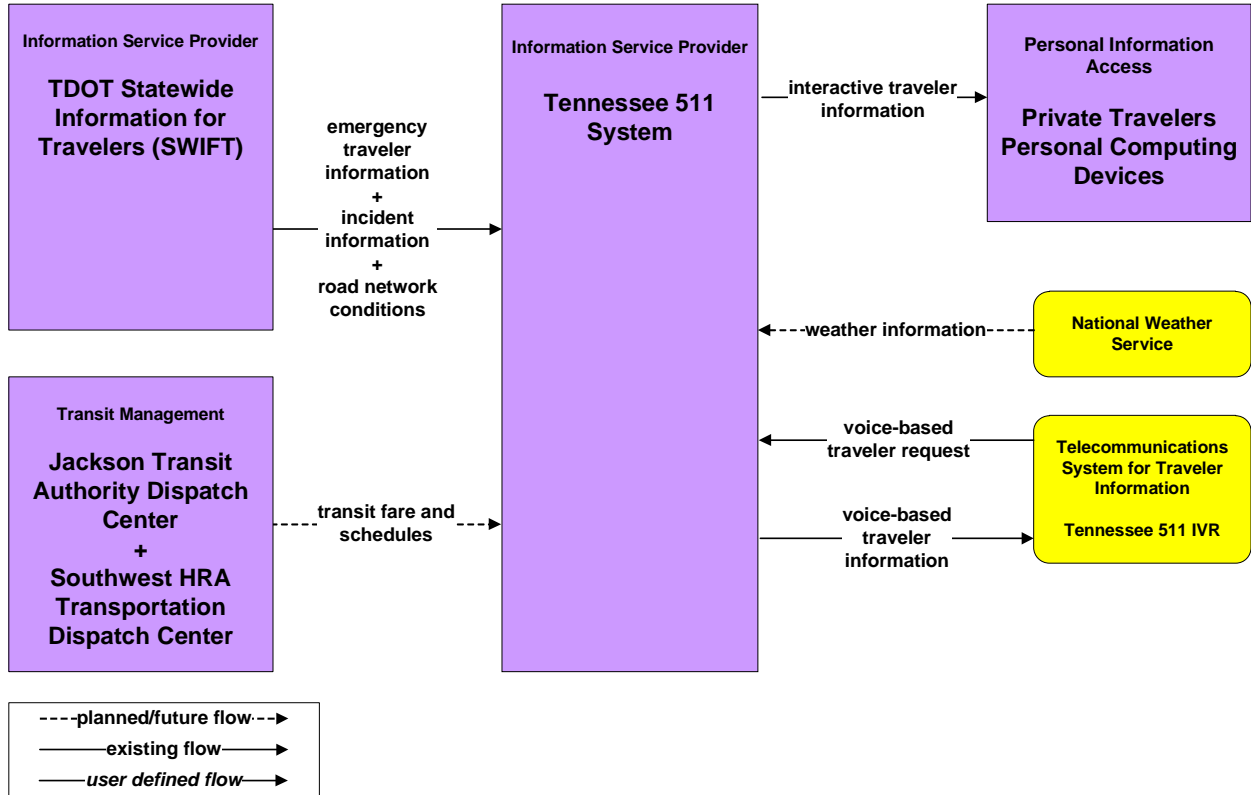

**ATIS02 – Interactive Traveler Information  
TDOT SmartWay**

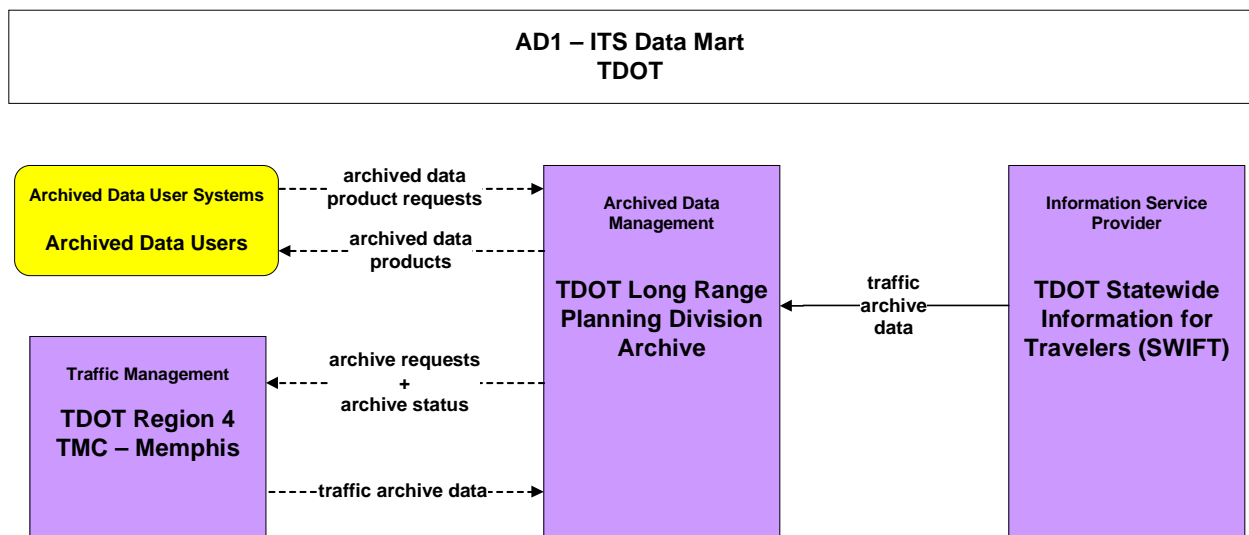

*Note:*  
 TDOT displays Google Traffic Data on the SmartWay Mobile App and Website.

**ATIS02 – Interactive Traveler Information  
Tennessee 511**

# Archived Data Management

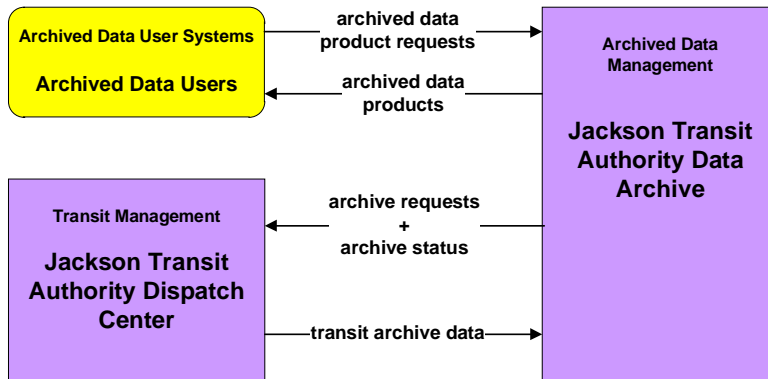

**AD1 – ITS Data Mart  
City of Jackson**

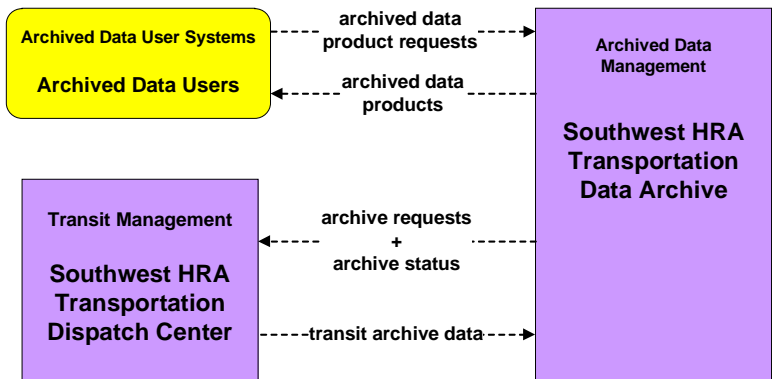

**AD1 – ITS Data Mart  
Jackson Transit Authority**

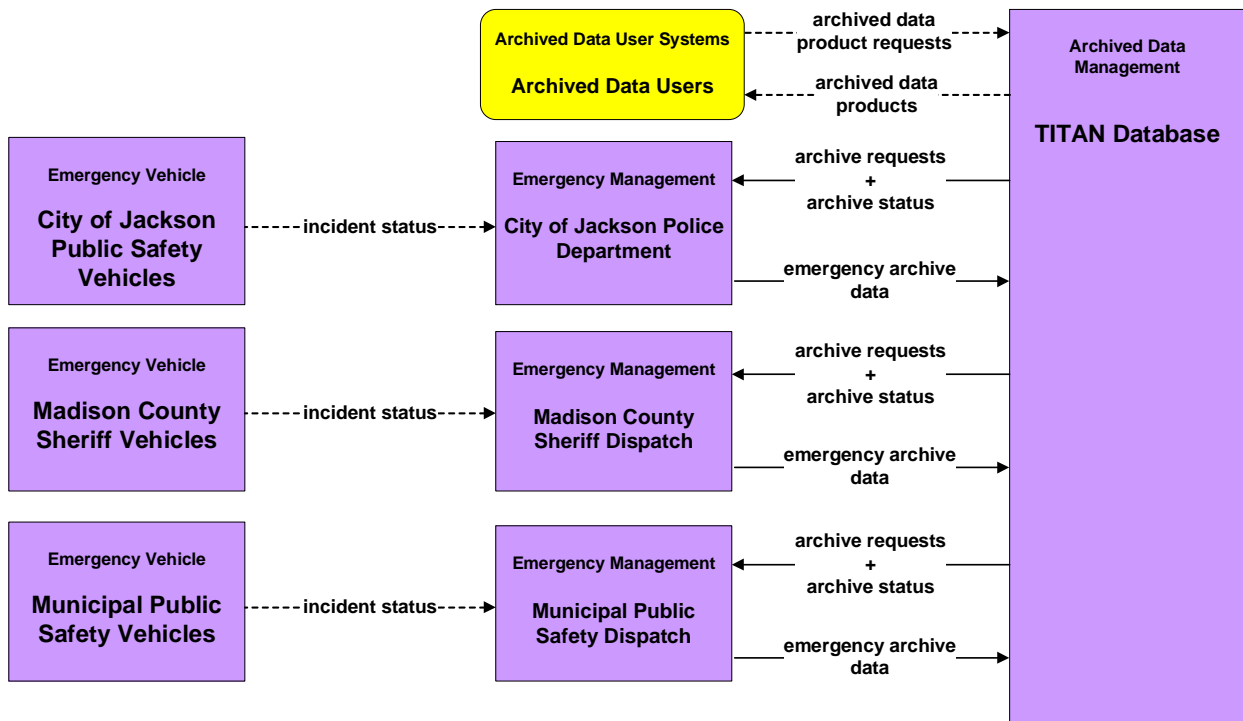

*Note:  
Data archive used by FTA, NTD, and TDOT  
Office of Passenger Transportation. Currently  
stored as Excel records.*

**AD1 – ITS Data Mart  
Southwest HRA Transportation**

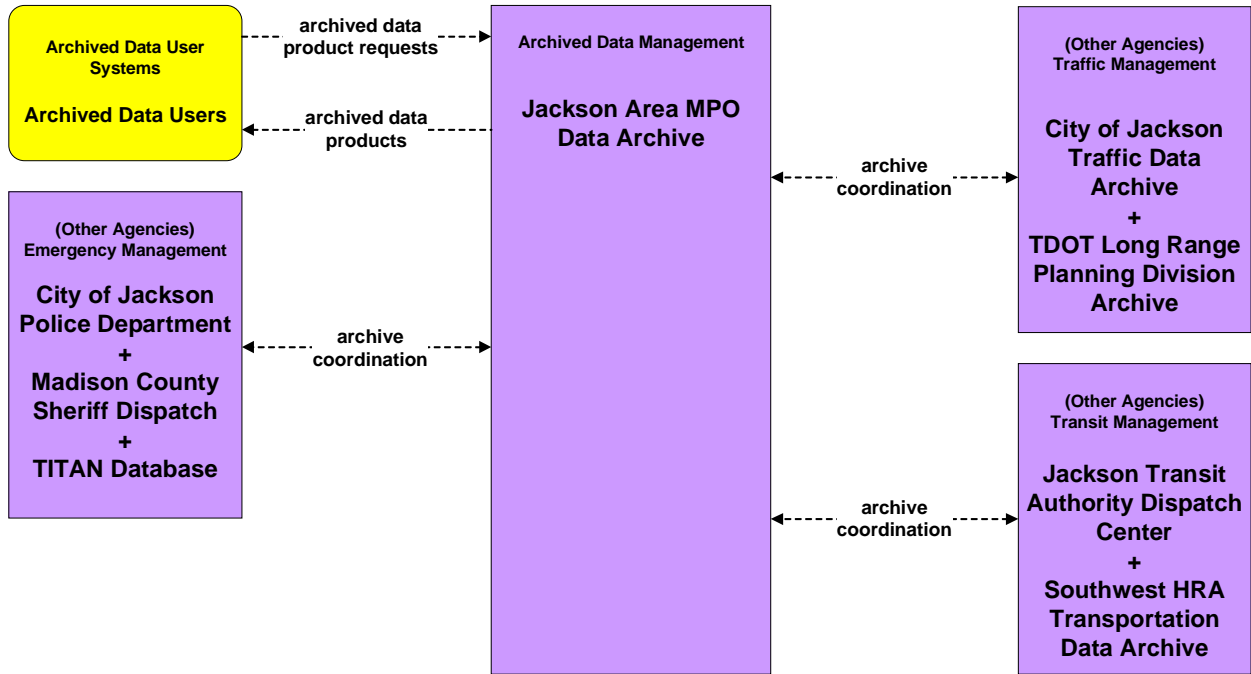

**AD1 – ITS Data Mart  
TITAN**

*Note:  
Only reportable crashes are sent to the TITAN database.*

**AD3 – Virtual ITS Data Warehouse  
Jackson Area MPO**

## **APPENDIX C – ELEMENT FUNCTIONS**

Element Name	Equipment Package (Function)
City of Jackson CCTV	Roadway Basic Surveillance
City of Jackson Central Dispatch	Emergency Call-Taking
	Emergency Dispatch
	Emergency Evacuation Support
	Emergency Response Management
	Emergency Routing
	Incident Command
City of Jackson DMS	Roadway Traffic Information Dissemination
	Roadway Work Zone Traffic Control
City of Jackson Engineering Department	MCM Work Activity Coordination
City of Jackson Field Sensors	Roadway Basic Surveillance
	Roadway Data Collection
	Roadway Equipment Coordination
	Roadway Incident Detection
	Roadway Probe Data Communications
City Jackson Pedestrian Hybrid Beacons	Roadway Mixed Use Sensing
	Roadway Signal Control
City of Jackson Police Department	Emergency Data Collection
	Emergency Dispatch
	Emergency Routing
City of Jackson Public Safety Vehicles	On-board EV En Route Support
	On-board EV Incident Management Communication
City of Jackson Public Works Division	MCM Environmental Information Collection
	MCM Environmental Information Processing
	MCM Incident Management
	MCM Maintenance Decision Support
	MCM Roadway Maintenance and Construction
	MCM Vehicle Tracking
	MCM Work Activity Coordination
	MCM Work Zone Management
City of Jackson Public Works Division On-Call Emergency Responder	MCM Incident Management
City of Jackson Public Works Division Vehicles	MCV Roadway Maintenance and Construction
	MCV Vehicle Location Tracking
	MCV Work Zone Support
City of Jackson Rail Notification System	Roadway Equipment Coordination
	Standard Rail Crossing
City of Jackson RWIS Sensors	Roadway Environmental Monitoring

Element Name	Equipment Package (Function)
City of Jackson TOC	MCM Environmental Information Processing
	Collect Traffic Surveillance
	HRI Traffic Management
	TMC Environmental Monitoring
	TMC Evacuation Support
	TMC Incident Detection
	TMC Incident Dispatch Coordination/Communication
	TMC Probe Information Collection
	TMC Regional Traffic Management
	TMC Signal Control
	TMC Speed Monitoring and Warning
	TMC Traffic Information Dissemination
	TMC Work Zone Traffic Management
	Traffic Data Collection
	Traffic Equipment Maintenance
City of Jackson Traffic Data Archive	Government Reporting Systems Support
	ITS Data Repository
	Traffic and Roadside Data Archival
City of Jackson Traffic Signals	Roadway Basic Surveillance
	Roadway Equipment Coordination
	Roadway Mixed Use Sensing
	Roadway Signal Controls
	Roadway Signal Preemption
	Standard Rail Crossing
City of Jackson Website	Basic Information Broadcast
	Infrastructure Provided Trip Planning
	ISP Traveler Data Collection

## **APPENDIX E – AGREEMENTS**

**TDOT, TDOSHS, AND LOCAL GOVERNMENT “OPEN ROADS POLICY” (QUICK CLEARANCE FOR SAFETY AND MOBILITY) MEMORANDUM OF UNDERSTANDING**

**TDOT LIVE CCTV VIDEO AND INFORMATION SHARING AGREEMENT FOR LOCAL RESPONDER ENTITY USERS**

**TDOT LIVE CCTV VIDEO ACCESS AGREEMENT FOR PRIVATE ENTITY USERS**

**INTERAGENCY MEMORANDUM OF UNDERSTANDING  
BETWEEN THE  
TENNESSEE DEPARTMENT OF TRANSPORTATION (TDOT)  
AND THE  
MADISON COUNTY EMERGENCY MANAGEMENT AGENCY (MCEMA)  
MADISON COUNTY  
and the  
CITY OF JACKSON**

Relative to the

**URGENT CLEARANCE OF HIGHWAY INCIDENTS AND  
SAFETY AT INCIDENT SCENES**

**This memorandum of understanding by and between the parties named above is to provide guidance for personnel representing TDOT and the MADISON COUNTY EMERGENCY MANAGEMENT AGENCY (MCEMA) relative to HIGHWAY INCIDENTS within MADISON COUNTY, including traffic crashes and spilled cargo, in order to ensure public safety, to promote safe and orderly flow of traffic, to protect the safety of emergency responders, and to restore the roadway to full capacity as urgently as possible following an incident.**

WHEREAS, traffic congestion is a growing problem in Tennessee, especially on the controlled-access highways which carry the highest traffic volumes, and

WHEREAS, when congestion increases, so do the associated costs—in wasted time, fuel, missed appointments, late deliveries – air pollution levels are increased as is the potential for driver frustration and aggression, and

WHEREAS, national studies have shown that approximately 60% of all congestion is related to incidents (e.g., crashes, stalled vehicles, roadway debris, special events, road construction/maintenance) rather than inadequate roadway capacity, and

WHEREAS, national studies have shown that up to 20% of all collisions on controlled-access highways are "secondary" and attributable to an earlier incident that was not urgently and fully cleared, and

WHEREAS, emergency responders are especially at risk at the scene of incidents on high-speed, controlled-access roadways, and

WHEREAS, since MCEMA and TDOT have designated responsibilities and resources to address the problems caused by highway incidents,

NOW, THEREFORE, BE IT RESOLVED THAT:

The purpose of this memorandum is to facilitate joint efforts to alleviate the growing problems associated with incidents on Tennessee's roadways, especially the controlled-access interstate roadways, by emphasizing URGENT AND SAFE CLEARANCE of highway incidents.

LOCAL AGENCY - Responsibilities

1. Law enforcement agencies (Madison County Sheriff's Office, City of Jackson Police Department or the Tennessee Highway Patrol) will conduct investigations in as expedient a manner as possible considering the severity of the incident. Law enforcement investigators will work diligently to minimize traffic delays. When possible, non-critical aspects of an investigation will be conducted away from the immediate scene or at another time when the impact on traffic would be less.
2. At the scene of non-injury collisions, Law enforcement personnel will cooperate to quickly relocate vehicle(s), spilled cargo, and debris from the travel lanes and conduct investigations as far from the roadway as practical.
3. MCEMA personnel will encourage and assist other emergency responders in clearing incident scenes as soon as possible after their respective duties have been performed in order to reduce distractions for motorists and restore the roadway to normal operating conditions.
4. When one or more lanes of a controlled-access highway are blocked or a traffic queue is developing, law enforcement will call for a towing and recovery company capable of removing the vehicle or cargo as quickly as possible in accordance with established local agency policies and procedures.
5. If the owner of a vehicle or the cargo blocking a roadway requests that a specific towing/recovery company be contacted to remove the vehicle or cargo, law enforcement will only approve the request if there is reason to believe that the requested company can respond as quickly as other available towing/recovery company(ies) with comparable equipment.
6. MCEMA will not allow a lane to be blocked for the sole purpose of transferring non-hazardous cargo from one vehicle to another unless no other reasonable alternative is available.
7. In the enforcement of state laws and regulations, MCEMA will attempt to minimize the impacts on traffic, especially during peak commuting periods, and will not block or restrict lanes except as necessary for safety or critical investigations.
8. MCEMA will include information about safe and efficient traffic incident management and urgent clearance of roadways in training activities.

## TENNESSEE DEPARTMENT OF TRANSPORTATION - Responsibilities

9. TDOT will install reference markers, signs and other FHWA-approved markings as requested by MCEMA to allow quicker location of incidents and to facilitate investigation and reporting of incidents on controlled access roadways.
10. Whenever requested, and if possible, TDOT will provide equipment and personnel to facilitate quick removal of vehicles, cargo and debris from the roadway.
11. When requested, TDOT will assist in identifying and establishing temporary detours and associated traffic control.
12. TDOT will designate a primary contact person(s) and alternate(s) for TDOT Region IV and District 44 to work with the MCEMA on the use of TDOT equipment and personnel, storage space and other matters to promote "quick clearance". The list of contacts will be updated as changes occur.
13. TDOT will strive to minimize the traffic impacts of highway construction and maintenance and will consult with MCEMA about ways to accomplish that objective.
14. TDOT will advise MCEMA as far in advance as possible of all construction and maintenance activities that may have a significant impact on traffic flow and safety along all state highways in Madison County.
15. TDOT will include information about the needs and priorities of law enforcement officers, fire and emergency medical services, towing and recovery operators, and other incident responders in the training provided to incident management personnel, traffic management center operators, and maintenance personnel with incident management responsibilities.

## PARTNERSHIP - Responsibilities

16. MCEMA and TDOT will work together at incident scenes to promote urgent clearance, safety for motorists and emergency responders, and thorough investigations as required by the circumstances.
17. TDOT and MCEMA will position emergency equipment at highway incident scenes to minimize the impacts on traffic flow and to avoid blocking or restricting travel lanes unnecessarily. Further, the parties will coordinate the use of emergency lights at highway incident scenes, as practical and consistent with on-scene safety, to minimize distractions to motorists. The parties will also encourage other emergency responders to position their equipment and use emergency lights in the same manner.

18. For incidents involving hazardous materials, MCEMA and TDOT will work together with the Tennessee Emergency Management Agency (TEMA), fire services, and other responsible agencies. Once public safety has been assured, the priority will shift to restoring the roadway to full capacity as soon as possible.
19. TDOT and MCEMA will actively promote the idea of “quick clearance” and will seek the cooperation of other law enforcement and emergency response agencies, trucking companies, towing operators, and the news media throughout Madison County and adjoining counties.
20. MCEMA and TDOT understand that damage to vehicles or cargo may occur as the result of clearing the roadway on an urgent basis. The priority is treatment and recovery of injured parties, public and responder safety, and restoring the roadway to normal operating conditions as soon as possible.
21. TDOT, MCEMA, local responders, and other agencies as needed, will conduct an after-action review within ten (10) working days, unless unusual circumstances require more than ten days, following any incident that requires complete closure of an Interstate highway (in one or both directions of travel) for more than two (2) hours and following any incident that requires closure of one or more lanes for more than five (5) hours.

The purpose of the meeting will not be to find fault or to assign blame, but to identify opportunities for improvements in agency procedures, training, or allocation of resources. The after-action review will not substitute for critical incident stress debriefings (CISD) and will not address issues that are more appropriate for CISD.

A one-page report will be prepared jointly by the representatives of MCEMA and TDOT and forwarded through the chain-of-command to the Commissioner of TDOT and Director MCEMA within one month of the date of the incident, unless unusual circumstances require more than one month.

Regardless of the duration, extent, or location of closure, either agency may request an after-action meeting following any highway incident, and that meeting will be held and a report prepared as described above.

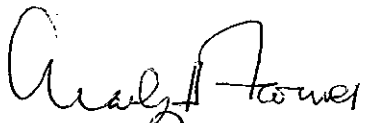

22. MCEMA and TDOT will meet periodically to discuss experiences with incident management and to work toward improvements. In addition to the after-action reviews described above, periodic working sessions will be held in the TDOT Region IV Office with MCEMA, TDOT, and other state and local agencies to discuss overall incident management and related issues.
23. MCEMA will attempt to notify TDOT of any situation that calls for closing any lane(s) of a controlled-access highway for more than thirty (30) minutes and will try to consult with TDOT in advance about alternatives to minimize the impact of traffic. That notification will be made as far in advance as possible, recognizing that not all

closures can be planned in advance and that immediate action without notification will sometimes be necessary to ensure safety and/or to minimize overall traffic disruptions.

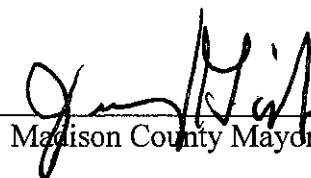

24. TDOT and MCEMA will work together to develop plans and procedures for diverting traffic from controlled-access highways, including pre-designated alternate routes, to facilitate the management of traffic incidents and other emergencies.
25. MCEMA and TDOT will work together to include highway incident management topics in their public education and outreach programs.
26. TDOT and MCEMA will work together to ensure that safe and efficient traffic incident management and urgent clearance of roadways is part of the training provided for all law enforcement, fire and emergency medical services, rescue squads, towing and recovery operators, and other incident responders in Madison County.
27. TDOT and MCEMA will work together to improve the management of information related to traffic incidents in MCEMA County, including but not necessarily limited to, improved reporting of major incidents and related traffic problems to the public, implementation of a "511" system, and development of a framework for a comprehensive information system to support all aspects of traffic incident management.
28. TDOT and MCEMA will work together to implement the *Strategic Plan for Highway Incident Management in Tennessee* and to support the ongoing planning process, including periodic reviews and updates.
29. TDOT and MCEMA will work together to organize and maintain the Madison County Highway Incident Management Team (HIMaT) in an effort to provide all responders a bi-monthly networking opportunity to facilitate improvements in highway incident management.
30. In carrying out their respective and shared responsibilities, MCEMA and TDOT will adopt and implement the doctrine, concepts, principles, terminology, and organizational processes set forth in the National Incident Management System (NIMS) to enable effective, efficient, and collaborative incident management.
31. TDOT and MCEMA will advise their personnel of this Agreement and promote implementation at every level of their organizations through established channels and protocol. TDOT will distribute advisory memorandums to personnel in Headquarter, Region, District and County Offices.

## **Tennessee Department of Transportation**

---

### **TRAFFIC OPERATIONS PROGRAM POLICY**

**Effective Date:**

**Title: Access to Live Video feeds and Information Sharing**

---

#### **POLICY**

The Tennessee Department of Transportation (TDOT) will make live video of traffic conditions from Closed Circuit Television (CCTV) available to the public. CCTV feeds from the Regional Transportation Management Centers (RTMC), located in Nashville, Knoxville, Chattanooga, and Memphis, will be supplied through TDOT's SmartView CCTV web site. The video feeds provided are those made available by the RTMC Operators from the images on the traffic surveillance monitors within the RTMC and that are consistent with the objectives of traffic management.

Live video feeds will generally be made available upon request to other government and public agencies to better coordinate traffic management strategies on incidents and crashes, and to private news media and other organizations for their use in providing traffic information to the public or their customers.

A non-exclusive access Agreement is required in order for governmental and private interests to receive access to live video. Costs associated with the access connection, if any, will be determined by TDOT and may become the responsibility of the USER.

#### **BACKGROUND**

In order to gather real-time traffic condition information, TDOT has constructed and operates four Regional Traffic Management Centers located in Nashville, Knoxville, Chattanooga, and Memphis. The RTMC is the central collection point for roadway condition information. The RTMC support systems gather and disseminate traffic information using the latest technologies.

CCTV has proven to be a significant management and delay-reduction tool for the identification and verification of incidents and crashes, thereby enabling a proper and timely response. The sharing of video information enhances the communication of current traffic conditions, thereby aiding travelers in planning their trip times, routes, and travel mode using the latest available information. TDOT will operate and maintain the CCTV system for the purpose of enhancing traffic incident response on the Tennessee roadway system. TDOT wishes to share that traffic information with other transportation operating agencies, incident response agencies and the public.

# Tennessee Department of Transportation And Responder Entity USERS

## ACCESS AGREEMENT FOR LIVE VIDEO AND INFORMATION SHARING

This Access Agreement for Live Video and Information Sharing is an Agreement between the Tennessee Department of Transportation (TDOT) and \_\_\_\_\_ hereafter referred to as the "USER."

The effective date of this Agreement is \_\_\_\_\_.

The "Access to Live Video" is that video provided by a Closed Circuit Television (CCTV) system developed for traffic management and provided by the Tennessee Department of Transportation Regional Transportation Management Centers (RTMC) operated by TDOT. The CCTV feeds will show live traffic conditions including crashes, stalled vehicles, road hazards, weather conditions, traffic congestion, maintenance work, and repair work locations.

The purpose of providing the USER with Access to Live Video is to detect and disseminate real-time traffic information to motorists and improve incident response and recovery. The following provisions of this Agreement are intended to ensure that the CCTV system is accessed and its information is used for this purpose and this purpose alone.

Information Sharing, as defined in this agreement, is that information provided or discovered by the USER which has an adverse traffic impact on any Tennessee Interstate, State Route, and that which adversely affects travelers. Any information that falls within this definition will be shared with the TDOT RTMC within 10 minutes of receiving such information. See section 2.I.

The USER hereby acknowledges and agrees that other matters not specifically addressed in this Agreement may arise and that TDOT shall have the right to make changes in this Agreement, by adding provisions, deleting provisions, and/or changing existing provisions when in TDOT's opinion circumstances require such changes. TDOT shall provide prior written notice of any such changes to this Agreement to the USER at which time the USER may or may not accept the revisions. Not accepting future revisions may result in the USER being denied access to the live video feeds.

USER shall also retain the right to terminate this Agreement as provided herein.

## **1. GENERAL INFORMATION:**

- A. TDOT will operate and maintain the CCTV system as a traffic management tool and, consistent with this purpose, TDOT agrees to provide the USER with Access to Live Video and Information Sharing. TDOT does not guarantee the continuity of this access, and TDOT does not warrant the quality of any video image or the accuracy of any image or information provided. Any reliance on such images or information is at the risk of the USER.
- B. TDOT will not record video feeds except for staff training purposes, and no files will be made available to the USER under this Agreement.
- C. TDOT will maintain exclusive control of the information and images released from the CCTV system to the USER, including but not limited to determining whether and when to provide a CCTV system feed, from what location, and for what duration. No feed will deploy the cameras' zoom capabilities, and no image will focus on vehicle license plates, drivers, or other personal identification of individuals involved in any traffic-related incident. No image will focus on any property or person outside the TDOT right-of-way. Access via feed will not be provided for events that are not, in the opinion of TDOT personnel, traffic-related. The decision whether to activate, and upon activation to terminate the access, is exclusively at the discretion of TDOT personnel.
- D. TDOT RTMC personnel will not accept requests that specific CCTV cameras are operated or repositioned.
- E. TDOT will provide each USER the same video feed from the CCTV system as any other USER participating in this Agreement. This Agreement in no way limits or restricts TDOT from providing video information to any other potential USER.
- F. TDOT reserves the right to terminate this video access program or to change the areas, times, or levels of access within the RTMC at any time.
- G. TDOT will provide training opportunities to all entities named in this Agreement and encourage participation in said training.

## **2. USER'S RESPONSIBILITIES:**

- A. USER is exclusively responsible for any costs related to the purchase and installation of the equipment necessary to receive the live video feed. User will be required to remove previously installed equipment from the RTMC (if any). USER is exclusively responsible for any costs related to the removal of this equipment. USER must give RTMC personnel

reasonable advance notice to schedule an appointment to remove equipment and RTMC personnel reserve the right to schedule such at a time and in such a manner so as to not interrupt or otherwise obstruct RTMC operations. USER staff at the RTMC shall be under the general direction of the RTMC Manager for routine conduct, privileges, and protocols within the RTMC.

- B. USER shall maintain the security and integrity of the CCTV system by limiting use of the system to trained and authorized individuals within their agency, and by insuring the system is used for the specific purpose stated in this Agreement. No feed shall be purposely broadcast live or rebroadcast that is zoomed in on an incident where individuals or license numbers are recognizable.
- C. USER accepts all risks inherent with the live video feeds, including, but not limited to, interruptions in the video feeds, downtime for maintenance, or unannounced adjustments to the camera displays. TDOT is providing the video feeds as a convenience to the USER and agrees to provide a good faith effort to maintain the video feed from TDOT equipment. The USER agrees to hold TDOT harmless, including TDOT employees and TDOT designated agents, from any damages caused to USER by loss of a video signal due to equipment failure or any act or omission on their part.
- D. USER agrees to provide TDOT with a technical contact person and with a list of all USER personnel trained to operate the TDOT SmartView system. USER shall limit technical calls to the RTMC for monitoring, diagnosing problems or otherwise performing any minor service on the SmartView system.
- E. USER agrees to acknowledge that the video feeds are provided by the Tennessee Department of Transportation.
- F. USER agrees to display the SMARTWAY logo in the upper left hand corner of any view provided outside of the agency.
- G. USER agrees to actively participate in the National Traffic Incident Management Responder Training Program. USER agrees that any employee of the agency reporting to the scene of an incident shall attend one 4-hour, in-person, National Traffic Incident Responder Training Program session within one year of the signing of this document. Training sessions will be provided for free and coordinated between the USER and TDOT.
- H. USER agrees to support and abide by the concept of a safe and quick clearance approach to traffic incidents and events, as defined by the National Traffic Incident Responder Training Program.

- I. USER agrees to provide timely, accurate information and assistance to TDOT or other agencies, responders and roadway users about roadway conditions, major and minor incidents and alternate routes through the use of any USER resources.
  - i. USER agrees to notify the RTMC of their surrounding TDOT Region of any unexpected incidents that are expected to have an adverse impact on traffic operations of Interstate or State Routes, within 10 minutes of first notification to the USER. This applies to any incident where TDOT or the Tennessee Highway Patrol is not already on-scene. Unexpected incidents may include, but are not limited to: traffic crashes, disabled vehicles, roadway debris, hazardous weather conditions, traffic queues, or traffic signal failures.
  - ii. USER agrees to collaborate with TDOT with respect to traffic management of planned events that are expected to have an adverse impact on traffic operations of Interstate or State Routes. Planned events include temporary traffic generating events (such as concerts or fairs) and roadway work zone activities (such as construction or maintenance activities). Collaboration and information sharing between USER and TDOT should occur as early as possible.
- J. USER agrees to actively participate in quarterly Regional Traffic Incident Management meetings. USER agrees to provide the names of a primary and alternate individual with the authority to speak on behalf of the USER at these quarterly meetings.

### **3. LIABILITY AND INDEMNITY PROVISIONS:**

- A. USER agrees to defend, indemnify, and hold TDOT harmless from and against any and all liability and expense, including defense costs and legal fees, caused by any negligent or wrongful act or omission of the USER, or its agents, officers, and employees, in the use, possession, or dissemination of information made available from the CCTV system to the extent that such expenses or liability may be incurred by TDOT, including but not limited to, personal injury, bodily injury, death, property damage, and/or injury to privacy or reputation.
- B. The liability obligations assumed by the USER pursuant to this Agreement shall survive the termination of the Agreement, as to any and all claims including without limitation liability for any damages to TDOT property or for injury, death, property damage, or injury to personal reputation or

privacy occurring as a proximate result of information made available from the CCTV system.

**4. TERMINATION:**

- A. TDOT or USER may terminate this Agreement at any time for any reason by providing written notice of termination.

## **TRAFFIC OPERATIONS PROGRAM POLICY**

**Effective Date: July 1st 2012**

**Title: Access to Live Video**

---

### **POLICY**

The Tennessee Department of Transportation (TDOT) will make live video of traffic conditions from Closed Circuit Television (CCTV) available to the public. CCTV images will be supplied from a Regional Transportation Management Center (RTMC) which are located in each of TDOT's four regions. The video images provided will be those selected by the RTMC Operators from the images on the traffic surveillance monitors within the RTMC and that are consistent with the objectives of traffic management.

Live video images will generally be made available upon request to other government and public agencies to better coordinate traffic management strategies on incidents and crashes, and to private news media and other companies for their use in providing traffic information to the public or their customers.

A non-exclusive access agreement is required in order for governmental and private interests to receive direct access to live video. Costs for access connection are solely the responsibility of the USER and are not set by TDOT.

### **BACKGROUND**

In order to gather real-time traffic condition information, TDOT has constructed and operates an RTMC within each of TDOT's four regions. The RTMC is being developed into the central collection point for freeway condition information. The RTMC support systems gather and disseminate traffic information using the latest technologies.

CCTV has proven to be a significant management and delay-reduction tool for the identification and verification of incidents and crashes, thereby enabling a proper and timely response. The sharing of video information enhances the communication of current traffic conditions, thereby aiding travelers in planning their trip times, routes, and travel mode using the latest available information. TDOT will operate and maintain the CCTV system for the purpose of enhancing traffic incident response on each regional freeway system. TDOT wishes to share that traffic information with other transportation operating agencies, incident response agencies and the public.

Live CCTV Video Access Agreement Between  
Tennessee Department of Transportation  
And  
Private Entity Users

# Tennessee Department of Transportation And Private Entity Users

## ACCESS AGREEMENT FOR LIVE VIDEO

This Access Agreement for Live Video (Agreement) is an agreement between the Tennessee Department of Transportation (TDOT) and \_\_\_\_\_, hereafter referred to as the "USER."

The effective date of this Agreement is July 1<sup>st</sup> 2012. This Agreement replaces and supersedes any and all other agreements between the parties with respect to the same subject matter.

The "Access to Live Video" is that video provided by a Closed Circuit Television (CCTV) system developed for traffic management and provided by the Regional Transportation Management Center (RTMC) which is operated by TDOT. The CCTV images will show live traffic conditions including crashes, stalled vehicles, road hazards, weather conditions, traffic congestion, and maintenance and repair work locations.

The purpose of providing the USER with Access to Live Video is to disseminate real-time traffic information to motorists and to help improve incident management response times. The following provisions of this Agreement are intended to ensure that the CCTV system is accessed and its information used for this purpose and this purpose alone.

The USER hereby acknowledges that other matters not addressed in this Agreement may arise after the signing of this Agreement. Therefore, TDOT reserves the right to make changes in this Agreement by adding provisions, deleting provisions, and/or changing existing provisions when in TDOT's opinion circumstances require such changes.

### **A. GENERAL INFORMATION:**

1. TDOT will operate and maintain the CCTV system as a traffic management tool and, consistent with this purpose, TDOT agrees to provide the USER with Access to Live Video. TDOT does not guarantee the continuity of this access, and TDOT does not warrant the quality of any video image or the accuracy of any image or information provided. Any reliance on such images or information is at the risk of the USER.

2. TDOT will not record video images except for staff training purposes, and no video captures will be made available to the USER under this Agreement.
3. TDOT will maintain exclusive control of the information and images released from the CCTV system to the USER, including but not limited to determining whether and when to provide a CCTV system feed, from what location, and for what duration. No feed will deploy the cameras' zoom capabilities, and no image will focus on vehicle license plates, drivers, or other personal identification of individuals involved in any traffic-related incident. No image will focus on any property or person outside the TDOT right-of-way. Access via feed will not be provided for events that are not, in the opinion of TDOT personnel, traffic-related. The decision whether to activate, and upon activation to terminate the access, is exclusively at the discretion of TDOT personnel.
4. RTMC personnel will not accept requests that specific CCTV cameras be operated or that camera's be repositioned.
5. Each USER will receive the same video feed from the CCTV system as any other USER participating in this Agreement. This Agreement in no way limits or restricts TDOT from providing video information to any other potential USER.
6. TDOT reserves the right to terminate this video access program or to change the areas, times, or levels of access within the RTMC at any time.

**B. USER'S RESPONSIBILITIES:**

1. USER may install necessary equipment at the RTMC in order to obtain the video feed; the USER is exclusively responsible for any costs related to the purchase and installation of the equipment. TDOT personnel shall determine the amount of rack space that will be provided and at what location within the RTMC the equipment will be placed. TDOT reserves the right to inspect all installed equipment and its configuration. Under no circumstances shall the placement and installation of USER's equipment interfere with RTMC equipment or activities of RTMC personnel. The responsibility for the service, maintenance, and upkeep of the installed equipment is exclusively that of the USER. USER must give RTMC personnel reasonable advance notice of any maintenance/repair visits, and RTMC personnel reserves the right to schedule such visits at a time and in such a manner so as to not interrupt or otherwise obstruct RTMC operations. USER assumes any and all liability, to the extent provided by law, for the cost of any repair and/or other damages to TDOT's CCTV system caused in any manner by the installation, servicing or maintenance of the USER's equipment or by the equipment once installed. USER staff at the RTMC shall be under the general direction of the RTMC Manager for routine conduct, privileges, and protocols within the RTMC.
2. USER shall maintain the security and integrity of the CCTV system by limiting use of the system to trained and authorized individuals, and by insuring the system is used for the specific purpose stated in this Agreement. No feed shall be purposely

broadcast live or rebroadcast that is zoomed in on an accident where individuals or license numbers are recognizable.

3. USER agrees to move or alter, at its own expense, any of its equipment, hardware, or software, as TDOT deems necessary to accommodate future alterations, improvements, or other changes to the RTMC equipment or facilities.

4. USER accepts all risks inherent with the live video feeds, including, but not limited to, interruptions in the video feed, downtime for maintenance, or unannounced adjustments to the camera displays. TDOT is providing the video feeds as a convenience to the USER and agrees to provide a good faith effort to maintain the video feed from TDOT equipment. The USER agrees to hold TDOT harmless, including TDOT employees and TDOT-designated agents, from any damages caused to USER by loss of a video signal due to equipment failure or any act or omission on their part.

5. USER agrees to provide TDOT with a technical contact person and with a list of all USER's owned and supplied equipment connected to the RTMC, including the basic operational capabilities of such equipment. USER shall limit calls to the RTMC for monitoring, diagnosing problems or otherwise performing any minor service on USER owned and supplied equipment.

6. USER agrees to acknowledge the video images are provided by the Tennessee Department of Transportation. This must be done by showing either of the two TDOT SmartWay logos provided by TDOT (unaltered) that is readable to the viewer and shown during the entire use of camera images.

#### **C. LIABILITY AND INDEMNITY PROVISIONS:**

1. To the extent provided by law, the USER agrees to defend, indemnify, and hold TDOT harmless from and against any and all liability and expense, including defense costs and legal fees, caused by any negligent or wrongful act or omission of the USER, or its agents, officers, and employees, in the use, possession, or dissemination of information made available from the CCTV system to the extent that such expenses or liability may be incurred by TDOT, including but not limited to, personal injury, bodily injury, death, property damage, and/or injury to privacy or reputation.

2. The liability obligations assumed by the USER pursuant to this Agreement shall survive the termination of this Agreement, as to any and all claims including without limitation liability for any damages to TDOT property or for injury, death, property damage, or injury to personal reputation or privacy occurring as a proximate result of information made available from the CCTV system.

#### **D. TERMINATION:**

1. TDOT or USER may terminate this Agreement at any time for any reason by providing written notice of termination.

2. Upon termination of this Agreement by either party, the USER shall promptly remove its equipment from the RTMC as directed by TDOT.

**APPENDIX F – REGIONAL ITS ARCHITECTURE  
MAINTENANCE FORM**

# Jackson Region Regional ITS Architecture Maintenance Form

Please complete the following form to document changes to the 2015 Jackson Regional ITS Architecture. Forms should be submitted to the Jackson Area Metropolitan Planning Organization (MPO) for review and acceptance. All accepted changes will be kept on file by the Jackson Area MPO and shared with the TDOT Traffic Operations Division. Changes will be incorporated into the 2015 Jackson Regional ITS Architecture during the next scheduled update.

## Change Information

Please indicate the type of change to the Regional ITS Architecture or Deployment Plan:

- Administrative Change – Basic changes that do not affect the structure of the ITS service packages in the Regional ITS Architecture.  
*Examples include: Changes to stakeholder or element name, element status, or data flow status.*
- Functional Change – Single Agency: Structural changes to the ITS service packages that impact only one agency in the Regional ITS Architecture.  
*Examples include: Addition of a new ITS service package or changes to data flow connections of an existing ITS service package. The addition or changes would only impact a single agency.*
- Functional Change – Multiple Agencies: Structural changes to the ITS service packages that have the potential to impact multiple agencies in the Regional ITS Architecture.  
*Examples include: Addition of a new ITS service package or changes to data flow connections of an existing ITS service package. The addition or changes would impact multiple agencies and require coordination between the agencies.*
- Project Change – Addition, modification, or removal of a project in the Regional ITS Deployment Plan.
- Other: \_\_\_\_\_  
\_\_\_\_\_

# Jackson Region Regional ITS Architecture Maintenance Form (Example of Completed Form)

<p><b>Question 1</b> Describe the requested change to the Regional ITS Architecture or Deployment Plan.</p>	<p><i>Example: City A is planning to deploy CCTV cameras for network surveillance on arterial streets. In the Regional ITS Architecture, the City A Traffic Operations Center (TOC) is shown as the only center controlling the CCTV cameras. The City A TOC is now planning to provide images and control of the CCTV cameras to the City A Police Department for use during incidents.</i></p>
<p><b>Question 2</b> Are any of the Regional ITS Architecture service packages impacted by the proposed change?</p>	<p><input type="checkbox"/> Yes: Please complete Questions 2A and 2B  <input type="checkbox"/> No: Please proceed to Question 3  <input type="checkbox"/> Unknown: Please coordinate with the Jackson Area MPO to determine impacts of the change to the Regional ITS Architecture</p>
<p><b>Question 2A</b> List all of the ITS service packages impacted by the proposed change.</p>	<p><i>Example: ATMS08 – Traffic Incident Management System ATMS01 – Network Surveillance</i></p>
<p><b>Question 2B</b> Include a copy of the ITS service packages impacted by the proposed change and mark any proposed modifications to the ITS service packages. Add any additional notes on proposed changes in this section.</p>	<p><i>Example: A sketch of the ATMS08 – Traffic Incident Management System service package diagram for City A is attached. Changes have been marked by hand to indicate the new data connections that will be established to allow the City A TOC to send traffic images to the City A Police Department and for the City A Police Department to control the CCTV cameras. The deployment of the CCTV cameras will also result in several of the data flows in ATMS01 – Network Surveillance being changed from planned to existing. These have also been marked on the service package diagram. (Note: The ITS service package diagrams can be found in Appendix B of the Regional ITS Architecture.)</i></p>
<p><b>Question 3</b> Does the proposed change impact any stakeholder agencies other than the agency completing this form?</p>	<p><input type="checkbox"/> Yes: Please complete Questions 3A and 3B  <input type="checkbox"/> No: Form is complete  <input type="checkbox"/> Unknown: Please coordinate with the Jackson Area MPO to determine impacts of change to other agencies in the Regional ITS Architecture</p>
<p><b>Question 3A</b> Identify the stakeholder agencies impacted by the change and a contact person for each agency.</p>	<p><i>Example: The City A TOC and City A Police Department are the two agencies impacted by this change. (Note: Assuming the City A TOC representative is completing this form, the contact person from the City A Police Department working on this project should be listed.)</i></p>
<p><b>Question 3B</b> Describe the coordination that has occurred with the stakeholder agencies and the results of the coordination?</p>	<p><i>Example: The City A TOC and City A Police Department have had several meetings in the last year to discuss the operations of the arterial CCTV cameras. An operational agreement for the joint operations of the CCTV cameras is currently being developed.</i></p>
